This European Standard was approved by CEN on 22 June 2020.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN ISO 11073-10101:2020) has been prepared by Technical Committee ISO/TC 215 "Health informatics" in collaboration with Technical Committee CEN/TC 251 "Health informatics" the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by March 2021, and conflicting national standards shall be withdrawn at the latest by March 2021.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN ISO 11073-10101:2005.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Endorsement notice

The text of ISO/IEEE 11073-10101:2020 has been approved by CEN as EN ISO 11073-10101:2020 without any modification.

Introduction

This introduction is not part of IEEE Std 11073-10101-2019, Health informatics—Point-of-Care Medical Device Communication—Nomenclature.

ISO/IEEE 11073 standards enable communication between medical devices and external computer systems. They provide automatic and detailed electronic data capture of patient vital signs information and device operational data. The primary goals are to

- Provide real-time plug-and-play interoperability for patient-connected medical devices.
- Facilitate the efficient exchange of vital signs and medical device data, acquired at the point-of-care, in all health care environments.

“Real-time” means that data from multiple devices can be retrieved, time correlated, and displayed or processed in fractions of a second. “Plug-and-play” means that all the clinician has to do is make the connection — the systems automatically detect, configure, and communicate without any other human interaction.

“Efficient exchange of medical device data” means that information that is captured at the point-of-care (e.g., patient vital signs data) can be archived, retrieved, and processed by many different types of applications without extensive software and equipment support, and without needless loss of information. The standards focus on acute care devices, such as patient monitors, ventilators, infusion pumps, ECG devices, etc, and personal health devices and systems. They comprise a family of standards that can be layered together to provide connectivity optimized for the specific devices being interfaced.

IEEE Std 11073-10101 was originally published in 2004 in conjunction with the International Organization for Standardization (ISO). In 2015, IEEE published an amendment that expanded the nomenclature and definitions covered in the standard to reflect the continued innovation in medical device and system design. This 2019 revision integrates the amendment into the original text and further updates and expands the nomenclature and definitions.

Contents

1. Scope	20
2. Normative references.....	20
3. Terms, definitions, symbols, and abbreviated terms.....	22
3.1 Terms and definitions	22
3.2 Symbols and abbreviated terms	22
4. Conformance	25
5. Introduction to the standard.....	25
6. Application	25
7. Semantics.....	26
7.1 Attribution	26
7.2 Coding	27
7.2.1 Context-sensitivity	27
7.2.2 Grouping	28
7.3 Synonyms	29
7.4 Deprecated terms	29
7.5 Withdrawn terms	29
8. Syntax.....	29
8.1 Transfer.....	29
8.1.1 Types.....	29
8.1.2 Notation	30
8.2 Programmatic form.....	32
8.2.1 Attribution.....	32
8.2.2 Notation	32

Annex A (normative) Nomenclature semantics.....	34
A.1 Overview of nomenclature for vital signs—Semantics	34
A.2 Code assignment to the MDIB elements.....	35
A.2.1 Overview.....	35
A.2.2 Relationship to other standards	35
A.2.3 Basic rules	35
A.2.4 Coding spaces	36
A.3 Data dictionary and codes for object-oriented modeling elements (Partition 1).....	45
A.3.1 Introduction	45
A.3.2 Object-oriented modeling elements: inventory tables	46
A.4 Data dictionary and codes for communication infrastructure (Partition 8).....	79
A.4.1 Introduction	79
A.4.2 Communication infrastructure: inventory tables	79
A.5 Nomenclature, data dictionary, and codes for vital signs devices (Partition 1)	84
A.5.1 Introduction	84
A.5.2 Base concepts.....	85

A.5.3 First set of differentiating criteria.....	85
A.5.4 Second set of differentiating criteria	86
A.5.5 Third set of differentiating criteria	86
A.5.6 Attributes.....	87
A.5.7 Device class discriminator	87
A.5.8 Code table	87
A.6 Terminology and codes for units of measurement (Partition 4).....	98
A.6.1 Introduction	98
A.6.2 Orders of magnitude discriminator	98
A.6.3 Units outside of SI.....	99
A.6.4 Units of measurement	100
A.6.5 Withdrawn terms for vital signs units of measurement.....	122
A.6.6 Deprecated terms for vital signs units of measurement.....	123
A.6.7 Deprecated RefIDs for Vital Signs Units of Measurement	124
A.7 Nomenclature, data dictionary, and codes for metrics (measurements and enumerations) (Partition 2).....	125
A.7.1 Nomenclature for ECG measurements.....	125
A.7.2 Nomenclature for ECG enumerations	157
A.7.3 Nomenclature, data dictionary, and codes for haemodynamic monitoring measurements	173
A.7.4 Nomenclature and codes for respiratory, ventilator, and anesthesia measurements.....	192
A.7.5 Nomenclature, data dictionary, and codes for common blood-gas, blood, urine, and other fluid chemistry measurements	273
A.7.6 Nomenclature, data dictionary, and codes for fluid output measurements.....	288
A.7.7 Nomenclature, data dictionary, and codes for pumps	292
A.7.8 Nomenclature, data dictionary, and codes for neurological monitoring measurements	309
A.7.9 Nomenclature, data dictionary, and codes for neurophysiologic enumerations	322
A.7.10 Nomenclature, data dictionary, and codes for stimulation modes.....	346
A.7.11 Nomenclature, data dictionary, and codes for miscellaneous measurements.....	353
A.7.12 Nomenclature and code extensions for infant incubator and warmer microenvironments.....	360
A.7.13 Nomenclature, data dictionary, and codes for spirometry	362
A.7.14 Nomenclature and code extensions for personal health devices	372
A.8 Nomenclature, data dictionary, and codes for body sites (Partition 7)	377
A.8.1 Introduction	377
A.8.2 Sites for neurophysiological signal monitoring: locations near peripheral nerves	378
A.8.3 Sites for neurophysiological signal monitoring: locations near muscles.....	392
A.8.4 Sites for EEG-electrode placement on the head	430
A.8.5 Sites for EOG signal monitoring	438
A.8.6 Sites for general neurological monitoring measurements and drainage	443
A.8.7 Sites for cardiovascular measurements	445
A.8.8 Miscellaneous sites used in vital signs monitoring and measurement	451
A.8.9 Equipment sites used in vital signs monitoring and measurement	466
A.8.10 Qualifiers of body site locations.....	468
A.9 Nomenclature, data dictionary, and codes for events and alerts (Partition 3).....	472
A.9.1 Introduction	472
A.9.2 Diagnostic pattern events	472
A.9.3 Device-related and environment-related events	483
A.10 Systematic derivations of terms and codes for infrastructure (Partition 8).....	519
A.10.1 Introduction	519
A.10.2 Base concepts, device specialization.....	519
A.10.3 Base concepts, device sub-specialization	523
A.10.4 Base concepts, time synchronization profiles	526
A.11 Systematic derivations of terms and codes for personal health devices disease management (Partition 128).....	527
A.11.1 Introduction	527
A.11.2 Base concepts, general device properties	527
A.11.3 Base concepts, Basic ECG sensors and status.....	528

A.11.4 Base concepts, Basic ECG event context.....	528
A.11.5 Base concepts, SABTE sensors and settings.....	529
A.11.6 Base concepts, SABTE modes	540
A.11.7 Base concepts, Glucose Monitoring, carbohydrate source.....	542
A.11.8 Base concepts, Glucose Monitoring, carbohydrate source.....	543
A.11.9 Base concepts, Glucose Monitoring, carbohydrate sources	543

Health informatics—Point-of-care medical device communication

Part 10101: Nomenclature

1. Scope

This standard defines a nomenclature for communication of information from point-of-care medical devices. Primary emphasis is placed on acute care medical devices and patient vital signs information. The nomenclature also supports concepts in an object-oriented information model that is for medical device communication.

2. Normative references

The following normative documents contain provisions that, through reference in this text, constitute provisions of ISO/IEEE 11073-10101. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on ISO/IEEE 11073-10101 are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid international standards.

IEEE Std 1073™, IEEE Standard for Medical Device Communications—Overview and Framework.^{1,2}

IEEE Std 11073-10102™-2012, Health informatics—Point-of-care medical device communication—Part 10102: Nomenclature—Annotated ECG.

IEEE Std 11073-10103™-2012, Health informatics—Point-of-care medical device communication—Part 10103: Nomenclature—Implantable device, cardiac.

ISO/IEC 8824 (all parts), Information technology — Abstract Syntax Notation One (ASN.1).³

3. Terms, definitions, symbols, and abbreviated terms

3.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply. The *IEEE Standards Dictionary Online* should be consulted for terms not defined in this clause.⁴

base term: A fundamental semantic concept.

co-constraint: A rule describing a constraint whose scope is inclusive of more than one term.

corollary: A semantic and a syntactical representation that are correlated by a unique code.

discriminators: A mechanism to provide additional semantic refinement to multiple base terms.

domain information model (DIM): The model describing common concepts and relationships for a problem domain.

reference identifier (RefId): A unique, symbolic, and programmatic form for the term. The form is correlated to the context-free code (i.e., terms are by definition context-free with respect to all other terms); in this standard, terms are prefixed with “MDC_” for consistency.

systematic name: An organization of differentiating, relational descriptors that are unique for each term.

terminology: A synonym for nomenclature.

tuple: A component of a relation; e.g., a 2-tuple has two relational components.

unique: Nonredundant.

3.2 Symbols and abbreviated terms

AI	aging independently
aka	also known as
API	application program interface

⁴ IEEE Standards Dictionary Online is available at <http://dictionary.ieee.org>.
