SPRINKLERSÜSTEEMID. PROJEKTEERIMINE,  
PAIGALDAMINE JA HOOLDUS

Fixed firefighting systems - Automatic sprinkler  
systems - Design, installation and maintenance

## ESTI STANDARDI EESSÕNA

## NATIONAL FOREWORD

See Eesti standard EVS-EN 12845:2015 sisaldab Euroopa standardi EN 12845:2015 ja selle paranduse EN 12845:2015/AC:2016 ingliskeelset teksti.	This Estonian standard EVS-EN 12845:2015 consists of the English text of the European standard EN 12845:2015 and its corrigendum EN 12845:2015/AC:2016.
Standard on jõustunud sellekohase teate avaldamisega EVS Teatajas	This standard has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation.
Euroopa standardimisorganisatsioonid on teinud Euroopa standardi rahvuslikele liikmetele kättesaadavaks 10.06.2015.	Date of Availability of the European standard is 10.06.2015.
Standard on kättesaadav Eesti Standardikeskusest.	The standard is available from the Estonian Centre for Standardisation.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile [standardiosakond@evs.ee](mailto:standardiosakond@evs.ee).

EUROPEAN STANDARD

EN 12845

NORME EUROPÉENNE

EUROPÄISCHE NORM

June 2015

ICS 13.220.20

Supersedes EN 12845:2004+A2:2009

English Version

## Fixed firefighting systems - Automatic sprinkler systems - Design, installation and maintenance

Installations fixes de lutte contre l'incendie - Systèmes  
d'extinction automatique du type sprinkleur - Conception,  
installation et maintenance

Ortsfeste Brandbekämpfungsanlagen - Automatische  
Sprinkleranlagen - Planung, Installation und Instandhaltung

This European Standard was approved by CEN on 20 December 2014.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## Contents

	Page
<b>Foreword.....</b>	<b>12</b>
<b>Introduction .....</b>	<b>13</b>
<b>1 Scope .....</b>	<b>15</b>
<b>2 Normative references .....</b>	<b>15</b>
<b>3 Terms and definitions .....</b>	<b>16</b>
<b>4 Contract planning and documentation.....</b>	<b>23</b>
<b>4.1 General.....</b>	<b>23</b>
<b>4.2 Initial considerations .....</b>	<b>23</b>
<b>4.3 Preliminary or estimating stage .....</b>	<b>23</b>
<b>4.4 Design stage.....</b>	<b>24</b>
<b>4.4.1 General.....</b>	<b>24</b>
<b>4.4.2 Summary schedule .....</b>	<b>24</b>
<b>4.4.3 Installation layout drawings .....</b>	<b>25</b>
<b>4.4.4 Water supply .....</b>	<b>28</b>
<b>5 Extent of sprinkler protection.....</b>	<b>30</b>
<b>5.1 Buildings and areas to be protected.....</b>	<b>30</b>
<b>5.1.1 General.....</b>	<b>30</b>
<b>5.1.2 Permitted exceptions within a building.....</b>	<b>30</b>
<b>5.1.3 Necessary exceptions .....</b>	<b>30</b>
<b>5.2 Storage in the open air .....</b>	<b>30</b>
<b>5.3 Fire resistant separation .....</b>	<b>30</b>
<b>5.4 Protection of concealed spaces .....</b>	<b>31</b>
<b>5.5 Height difference between the highest and lowest sprinklers.....</b>	<b>31</b>
<b>6 Classification of occupancies and fire hazards .....</b>	<b>31</b>
<b>6.1 General.....</b>	<b>31</b>
<b>6.2 Hazard classes .....</b>	<b>31</b>
<b>6.2.1 General.....</b>	<b>31</b>
<b>6.2.2 Light Hazard – LH .....</b>	<b>31</b>
<b>6.2.3 Ordinary Hazard – OH .....</b>	<b>31</b>
<b>6.2.4 High Hazard – HH.....</b>	<b>32</b>
<b>6.3 Storage.....</b>	<b>33</b>
<b>6.3.1 General.....</b>	<b>33</b>
<b>6.3.2 Storage Configuration.....</b>	<b>33</b>
<b>7 Hydraulic design criteria.....</b>	<b>36</b>
<b>7.1 LH, OH and HHP.....</b>	<b>36</b>
<b>7.2 High Hazard Storage – HHS.....</b>	<b>37</b>
<b>7.2.1 General.....</b>	<b>37</b>
<b>7.2.2 Ceiling or roof protection only .....</b>	<b>37</b>
<b>7.2.3 Intermediate level in-rack sprinklers .....</b>	<b>38</b>
<b>7.3 Pressure and flow requirements for pre-calculated systems .....</b>	<b>40</b>
<b>7.3.1 LH and OH systems .....</b>	<b>40</b>
<b>7.3.2 HHP and HHS systems without in-rack sprinklers.....</b>	<b>40</b>
<b>8 Water supplies .....</b>	<b>42</b>
<b>8.1 General.....</b>	<b>42</b>
<b>8.1.1 Duration .....</b>	<b>42</b>
<b>8.1.2 Continuity .....</b>	<b>42</b>
<b>8.1.3 Frost protection .....</b>	<b>43</b>

8.2	Maximum water pressure .....	43
8.3	Connections for other services .....	44
8.4	Housing of equipment for water supplies.....	44
8.5	Test facility devices.....	44
8.5.1	General .....	44
8.5.2	At pump house .....	45
8.5.3	At control valve sets .....	45
8.6	Water supply test.....	45
8.6.1	General .....	45
8.6.2	Storage tank and pressure tank supplies .....	46
8.6.3	Town main, booster pump, elevated private reservoir and gravity tank supplies .....	46
9	Type of water supply.....	46
9.1	General .....	46
9.2	Town mains.....	46
9.3	Storage tanks .....	46
9.3.1	General .....	46
9.3.2	Water volume .....	47
9.3.3	Refill rates for full capacity tanks .....	48
9.3.4	Reduced capacity tanks.....	48
9.3.5	Effective capacity of tanks and dimensions of suction chambers .....	50
9.3.6	Strainers .....	51
9.4	Inexhaustible sources – settling and suction chambers .....	51
9.5	Pressure tanks.....	54
9.5.1	General .....	54
9.5.2	Housing .....	54
9.5.3	Minimum capacity (water).....	54
9.5.4	Air pressure and contents .....	54
9.5.5	Charging with air and water .....	55
9.5.6	Control and safety equipment.....	55
9.6	Choice of water supply .....	55
9.6.1	Single water supplies.....	55
9.6.2	Superior single water supplies .....	56
9.6.3	Duplicate water supplies .....	56
9.6.4	Combined water supplies .....	56
9.7	Isolation of water supply .....	57
10	Pumps.....	57
10.1	General .....	57
10.2	Multiple pump arrangements .....	57
10.3	Compartments for pumpsets .....	58
10.3.1	General .....	58
10.3.2	Sprinkler protection .....	58
10.3.3	Temperature .....	58
10.3.4	Ventilation .....	58
10.4	Maximum temperature of water supply.....	58
10.5	Valves and accessories .....	58
10.6	Suction conditions .....	59
10.6.1	General .....	59
10.6.2	Suction pipe .....	59
10.7	Performance characteristics .....	62
10.7.1	Pre-calculated systems – LH and OH.....	62
10.7.2	Pre-calculated systems – HHP and HHS with no in-rack sprinklers.....	63
10.7.3	Calculated systems .....	64
10.7.4	Pressure and water capacity of boosted town mains .....	65
10.7.5	Pressure switches .....	65
10.8	Electrically driven pumpsets.....	65
10.8.1	General .....	65

10.8.2	Electricity supply .....	65
10.8.3	Main switchboard.....	66
10.8.4	Installation between the main switchboard and the pump controller .....	67
10.8.5	Pump controller .....	67
10.8.6	Monitoring of pump operation.....	67
10.9	Diesel engine driven pumpsets .....	67
10.9.1	General.....	67
10.9.2	Engines .....	68
10.9.3	Cooling system .....	68
10.9.4	Air filtration.....	68
10.9.5	Exhaust system.....	68
10.9.6	Fuel, fuel tank and fuel feed pipes .....	68
10.9.7	Starting mechanism .....	69
10.9.8	Electric starter motor batteries .....	70
10.9.9	Battery chargers .....	70
10.9.10	Siting of batteries and chargers .....	70
10.9.11	Starter alarm indication .....	71
10.9.12	Tools and spare parts .....	71
10.9.13	Engine tests and exercising .....	71
11	Installation type and size .....	72
11.1	Wet pipe installations .....	72
11.1.1	General.....	72
11.1.2	Protection against freezing.....	72
11.1.3	Size of installations .....	72
11.2	Dry pipe installations .....	73
11.2.1	General.....	73
11.2.2	Size of installations .....	73
11.3	Alternate installations .....	73
11.3.1	General.....	73
11.3.2	Size of installations .....	74
11.4	Pre-action installations .....	74
11.4.1	General.....	74
11.4.2	Automatic detection system.....	74
11.4.3	Size of installations .....	75
11.5	Subsidiary dry pipe or alternate extension .....	75
11.5.1	General.....	75
11.5.2	Size of subsidiary extensions .....	75
11.6	Subsidiary water spray extension.....	75
12	Spacing and location of sprinklers .....	75
12.1	General.....	75
12.2	Maximum area of coverage per sprinkler.....	76
12.3	Minimum distance between sprinklers.....	77
12.4	Location of sprinklers in relation to building construction.....	78
12.5	Intermediate sprinklers in HH occupancies .....	84
12.5.1	General.....	84
12.5.2	Maximum vertical distance between sprinklers at intermediate levels .....	84
12.5.3	Horizontal position of sprinklers at intermediate levels.....	84
12.5.4	Numbers of rows of sprinklers at each level .....	86
12.5.5	HHS intermediate sprinklers in non-shelved racks.....	86
12.5.6	HHS intermediate sprinklers below solid or slatted shelves in racks (ST5 and ST6) .....	87
13	Pipe sizing and layout .....	88
13.1	General.....	88
13.2	Calculation of pressure losses in pipework .....	88
13.2.1	Pipe friction loss .....	88
13.2.2	Static pressure difference.....	89

13.2.3	Velocity .....	89
13.2.4	Pressure loss through fittings and valves .....	89
13.2.5	Accuracy of calculations .....	90
13.3	Pre-calculated systems.....	91
13.3.1	General .....	91
13.3.2	Location of Design Points .....	91
13.3.3	Light Hazard - LH.....	92
13.3.4	Ordinary Hazard - OH .....	93
13.3.5	High hazard - HHP and HHS (except intermediate level sprinklers) .....	95
13.4	Fully calculated systems .....	103
13.4.1	Design density .....	103
13.4.2	Locations of the area of operation .....	104
13.4.3	Shape of the area of operation.....	104
13.4.4	Minimum sprinkler discharge pressure .....	108
13.4.5	Minimum pipe diameters .....	108
14	Sprinkler design characteristics and uses .....	108
14.1	General .....	108
14.2	Sprinkler types and application .....	108
14.2.1	General .....	108
14.2.2	Ceiling, flush, recessed and concealed pattern .....	109
14.2.3	Sidewall pattern .....	109
14.2.4	Flat spray pattern .....	109
14.3	Flow from sprinklers .....	109
14.4	Sprinkler temperature ratings .....	110
14.5	Sprinkler thermal sensitivity .....	111
14.5.1	General .....	111
14.5.2	Interaction with other measures .....	111
14.6	Sprinkler guards .....	111
14.7	Sprinkler water shields .....	111
14.8	Sprinkler rosettes .....	112
14.9	Corrosion protection of sprinklers .....	112
15	Valves .....	112
15.1	Control valve set.....	112
15.2	Stop valves.....	112
15.3	Ring main valves .....	112
15.4	Drain valves .....	112
15.5	Test valves .....	113
15.5.1	Alarm and pump start test valves .....	113
15.5.2	Remote test valves .....	113
15.6	Flushing connections .....	114
15.7	Pressure gauges.....	114
15.7.1	General .....	114
15.7.2	Water supply connections .....	114
15.7.3	Control valve set.....	114
15.7.4	Removal.....	115
16	Alarms and alarm devices .....	115
16.1	Water flow alarms .....	115
16.1.1	General .....	115
16.1.2	Water motor and gong .....	115
16.1.3	Piping to water motor.....	115
16.2	Electrical water flow and pressure switches .....	115
16.2.1	General .....	115
16.2.2	Water flow alarm switches .....	115
16.2.3	Dry and pre-action systems .....	116
16.3	Fire brigade and remote central station alarm connection.....	116

17	Pipework .....	116
17.1	General.....	116
17.1.1	Underground piping .....	116
17.1.2	Above ground piping.....	116
17.1.3	Welding of steel pipe .....	116
17.1.4	Flexible pipes and joints .....	117
17.1.5	Concealment .....	117
17.1.6	Protection against fire and mechanical damage .....	117
17.1.7	Painting .....	117
17.1.8	Drainage.....	117
17.1.9	Copper pipe .....	118
17.2	Pipe supports .....	118
17.2.1	General.....	118
17.2.2	Spacing and location.....	118
17.2.3	Design .....	119
17.3	Pipework in concealed spaces .....	119
17.3.1	General.....	119
17.3.2	False ceilings above OH occupancies .....	120
17.3.3	All other cases .....	120
18	Signs, notices, and information .....	120
18.1	Block plan.....	120
18.2	Signs and notices .....	120
18.2.1	Location plate.....	120
18.2.2	Signs for stop valves.....	120
18.2.3	Control valve set.....	121
18.2.4	Water supply connections to other services .....	121
18.2.5	Suction and booster pumps .....	121
18.2.6	Electric switches and control panels.....	122
18.2.7	Testing and operating devices .....	122
19	Commissioning .....	122
19.1	Commissioning tests .....	122
19.1.1	Pipework .....	122
19.1.2	Equipment .....	123
19.1.3	Water supplies .....	123
19.2	Completion certificate and documents .....	123
20	Maintenance .....	123
20.1	General.....	123
20.1.1	Introduction .....	123
20.1.2	Programmed work .....	123
20.1.3	Precautions while carrying out work .....	124
20.1.4	Replacement sprinklers .....	124
20.2	User's programme of inspection and checking .....	124
20.2.1	General.....	124
20.2.2	Weekly routine .....	124
20.2.3	Monthly routine .....	125
20.3	Service, testing and maintenance schedule .....	125
20.3.1	General.....	125
20.3.2	Quarterly routine .....	125
20.3.3	Half-yearly routine .....	127
20.3.4	Yearly routine .....	127
20.3.5	3 Yearly routine .....	128
20.3.6	10 yearly routine .....	128
21	Third party inspection .....	128
	Annex A (normative) Classification of typical hazards .....	129

<b>Annex B (normative) Methodology for categorizing stored goods .....</b>	<b>132</b>
B.1 General .....	132
B.2 Material factor (M).....	132
B.2.1 General .....	132
B.2.2 Material Factor 1 .....	132
B.2.3 Material factor 2 .....	133
B.2.4 Material factor 3 .....	134
B.2.5 Material factor 4 .....	134
B.3 Storage configuration .....	134
B.3.1 Effect of storage configuration .....	134
B.3.2 Exposed plastic container with non-combustible content .....	135
B.3.3 Exposed plastic surface – unexpanded .....	135
B.3.4 Exposed plastic surface – expanded .....	135
B.3.5 Open structure .....	135
B.3.6 Solid block materials.....	136
B.3.7 Granular or powdered materials .....	136
B.3.8 No special configuration.....	136
<b>Annex C (normative) Alphabetical listing of stored products and categories .....</b>	<b>137</b>
<b>Annex D (normative) Zoning of sprinkler installations .....</b>	<b>141</b>
D.1 General .....	141
D.2 Zoning of installations .....	141
D.3 Requirements for zoned installations .....	141
D.3.1 Extent of zones .....	141
D.3.2 Zone subsidiary stop valves .....	141
D.3.3 Flushing Valves .....	141
D.3.4 Monitoring .....	142
D.3.5 Zone test and drainage facilities.....	142
D.3.6 Installation control valve set .....	142
D.3.7 Installation monitoring and alarms.....	142
D.4 Block plan.....	143
<b>Annex E (normative) Special requirements for high rise systems .....</b>	<b>144</b>
E.1 General .....	144
E.2 Design criteria.....	144
E.2.1 Hazard group .....	144
E.2.2 Subdivision of high rise sprinkler systems .....	144
E.2.3 Standing water pressures at non-return and alarm valves.....	144
E.2.4 Calculation of distribution pipework for pre-calculated systems .....	144
E.2.5 Water pressures .....	144

<b>E.3</b>	<b>Water supplies .....</b>	<b>145</b>
<b>E.3.1</b>	<b>Types of water supplies .....</b>	<b>145</b>
<b>E.3.2</b>	<b>Pressure and flow requirements for pre-calculated installations .....</b>	<b>145</b>
<b>E.3.3</b>	<b>Water supply characteristics for pre-calculated installations .....</b>	<b>145</b>
<b>E.3.4</b>	<b>Pump performance for pre-calculated installations.....</b>	<b>145</b>
<b>Annex F (normative) Additional measures to improve system reliability and availability .....</b>		<b>148</b>
<b>F.1</b>	<b>General.....</b>	<b>148</b>
<b>F.2</b>	<b>Subdivision into zones.....</b>	<b>148</b>
<b>F.3</b>	<b>Wet pipe installations.....</b>	<b>148</b>
<b>F.4</b>	<b>Sprinkler type and sensitivity.....</b>	<b>148</b>
<b>F.5</b>	<b>Control valve set.....</b>	<b>148</b>
<b>F.6</b>	<b>Water supplies .....</b>	<b>148</b>
<b>F.7</b>	<b>Additional measures for theatres.....</b>	<b>148</b>
<b>F.8</b>	<b>Additional precautions for maintenance .....</b>	<b>149</b>
<b>Annex G (normative) Protection of special hazards.....</b>		<b>150</b>
<b>G.1</b>	<b>General.....</b>	<b>150</b>
<b>G.2</b>	<b>Aerosols.....</b>	<b>150</b>
<b>G.3</b>	<b>Clothes in multiple garment hanging storage .....</b>	<b>150</b>
<b>G.3.1</b>	<b>General.....</b>	<b>150</b>
<b>G.3.2</b>	<b>Categorization .....</b>	<b>150</b>
<b>G.3.3</b>	<b>Sprinkler protection other than at ceiling .....</b>	<b>151</b>
<b>G.3.4</b>	<b>Sprinklers in operation.....</b>	<b>151</b>
<b>G.3.5</b>	<b>Ceiling sprinklers.....</b>	<b>151</b>
<b>G.3.6</b>	<b>Automatic shutdown .....</b>	<b>151</b>
<b>G.3.7</b>	<b>Control valve set.....</b>	<b>151</b>
<b>G.4</b>	<b>Flammable liquid storage .....</b>	<b>152</b>
<b>G.5</b>	<b>Idle pallets .....</b>	<b>153</b>
<b>G.6</b>	<b>Spirit based liquors in wooden barrels .....</b>	<b>154</b>
<b>G.7</b>	<b>Non-woven synthetic fabric.....</b>	<b>154</b>
<b>G.7.1</b>	<b>Free standing storage .....</b>	<b>154</b>
<b>G.7.2</b>	<b>Rack storage .....</b>	<b>155</b>
<b>G.8</b>	<b>Polypropylene or polyethylene storage bins .....</b>	<b>155</b>
<b>G.8.1</b>	<b>General.....</b>	<b>155</b>
<b>G.8.2</b>	<b>Classification.....</b>	<b>155</b>
<b>G.8.3</b>	<b>Palletized rack storage (ST4).....</b>	<b>155</b>
<b>G.8.4</b>	<b>All other storage .....</b>	<b>155</b>
<b>G.8.5</b>	<b>Foam additive.....</b>	<b>156</b>
<b>Annex H (normative) Sprinkler systems monitoring .....</b>		<b>157</b>

<b>H.1</b>	<b>General .....</b>	<b>157</b>
<b>H.2</b>	<b>Functions to be monitored .....</b>	<b>157</b>
<b>H.2.1</b>	<b>General .....</b>	<b>157</b>
<b>H.2.2</b>	<b>Stop valves controlling water flow to sprinklers .....</b>	<b>157</b>
<b>H.2.3</b>	<b>Other stop valves .....</b>	<b>157</b>
<b>H.2.4</b>	<b>Liquid levels .....</b>	<b>157</b>
<b>H.2.5</b>	<b>Pressures .....</b>	<b>157</b>
<b>H.2.6</b>	<b>Electrical power .....</b>	<b>158</b>
<b>H.2.7</b>	<b>Temperature .....</b>	<b>158</b>
<b>Annex I</b>	<b>(normative) Transmission of alarms.....</b>	<b>159</b>
<b>I.1</b>	<b>Functions to be monitored .....</b>	<b>159</b>
<b>I.2</b>	<b>Alarm levels .....</b>	<b>160</b>
<b>Annex J</b>	<b>(informative) Precautions and procedures when a system is not fully operational .....</b>	<b>161</b>
<b>J.1</b>	<b>Minimizing the effects .....</b>	<b>161</b>
<b>J.2</b>	<b>Planned shut-down .....</b>	<b>161</b>
<b>J.3</b>	<b>Unplanned shut-down.....</b>	<b>162</b>
<b>J.4</b>	<b>Action following sprinkler operation.....</b>	<b>162</b>
<b>J.4.1</b>	<b>General .....</b>	<b>162</b>
<b>J.4.2</b>	<b>Installations protecting cold storage warehouses (air circulation refrigeration) .....</b>	<b>162</b>
<b>Annex K</b>	<b>(informative) Twenty-five year inspection.....</b>	<b>163</b>
<b>Annex L</b>	<b>(informative) Special technology .....</b>	<b>164</b>
<b>Annex M</b>	<b>(informative) Independent certification body .....</b>	<b>165</b>
<b>Annex N</b>	<b>(normative) Control Mode Specific Application Sprinklers: CMSA .....</b>	<b>166</b>
<b>N.1</b>	<b>Introduction.....</b>	<b>166</b>
<b>N.1.1</b>	<b>General .....</b>	<b>166</b>
<b>N.1.2</b>	<b>Definitions .....</b>	<b>166</b>

## Foreword

This document (EN 12845:2015) has been prepared by Technical Committee CEN/TC 191 "Fixed firefighting systems", the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2015, and conflicting national standards shall be withdrawn at the latest by December 2015.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 12845:2004+A2:2009.

It is included in a series of European Standards planned to cover:

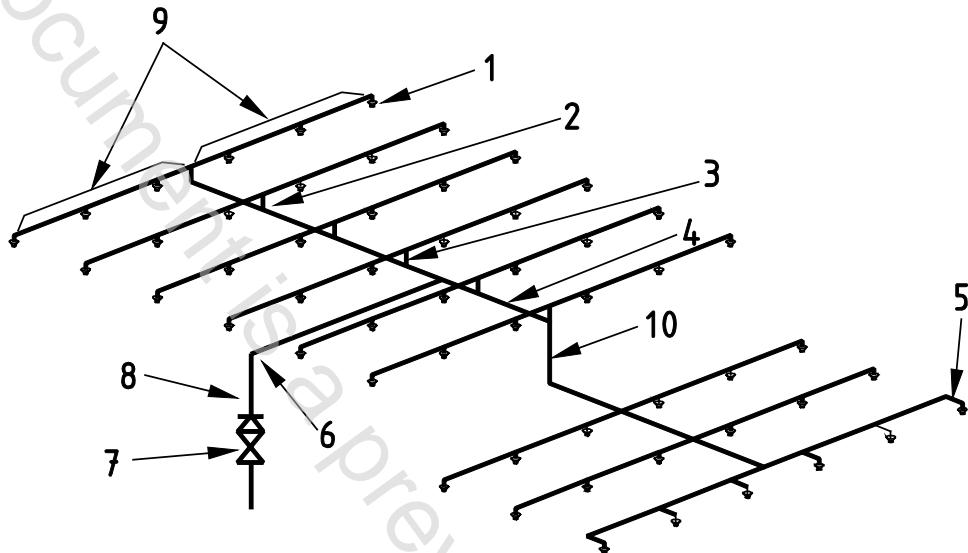

- automatic sprinkler systems (EN 12259);
- gas extinguishing systems (EN 12094);
- powder systems (EN 12416);
- explosion protection systems (ISO 6184);
- foam systems (EN 13565);
- gas systems (EN 12094);
- hydrant and hose reel systems (EN 671);
- smoke and heat control systems (EN 12101).

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## Introduction

An automatic sprinkler system is designed to detect a fire and extinguish it with water in its early stages or hold the fire in check so that extinguishment can be completed by other means.

A sprinkler system consists of a water supply (or supplies) and one or more sprinkler installations; each installation consists of a set of installation main control valves and a pipe array fitted with sprinkler heads. The sprinkler heads are fitted at specified locations at the roof or ceiling, and where necessary between racks, below shelves, and in ovens or stoves. The main elements of a typical installation are shown in Figure 1.

### Key

1	sprinkler head	6	main distribution pipe
2	riser	7	control valve set
3	design point	8	riser
4	distribution pipe spur	9	range pipes
5	arm pipe	10	drop

**Figure 1 — Main elements of a sprinkler installation**

The sprinklers operate at predetermined temperatures to discharge water over the affected part of the area below. The flow of water through the alarm valve initiates a fire alarm. The operating temperature is generally selected to suit ambient temperature conditions.

Only sprinklers in the vicinity of the fire, i.e. those which become sufficiently heated, operate.

The sprinkler system is intended to extend throughout the premises with only limited exceptions.

It should not be assumed that the provision of a sprinkler system entirely obviates the need for other means of fighting fires and it is important to consider the fire precautions in the premises as a whole.

Structural fire resistance, escape routes, fire alarm systems, particular hazards needing other fire protection methods, provision of hose reels and fire hydrants and portable fire extinguishers, etc., safe working and goods handling methods, management supervision and good housekeeping all need consideration.

It is essential that sprinkler systems should be properly maintained to ensure operation when required. This routine is liable to be overlooked or given insufficient attention by supervisors. It is, however, neglected at peril

to the lives of occupants of the premises and at the risk of crippling financial loss. The importance of proper maintenance cannot be too highly emphasized.

When sprinkler systems are out of service extra attention should be paid to fire precautions and the appropriate authorities informed.

It is a basic assumption that this standard is for the use of companies employing personnel competent in the field of application with which it deals. Only trained and experienced personnel should undertake the design, installation and maintenance of sprinkler systems. Similarly, competent technicians should be used in the installation and testing of the equipment (see Annex M).

## 1 Scope

This European Standard specifies requirements and gives recommendations for the design, installation and maintenance of fixed fire sprinkler systems in buildings and industrial plants, and particular requirements for sprinkler systems that are integral to measures for the protection of life.

This European Standard covers only the types of sprinkler specified in EN 12259-1 (see Annex L).

The requirements and recommendations of this European Standard are also applicable to any addition, extension, repair or other modification to a sprinkler system. They are not applicable to water spray or deluge systems.

It covers the classification of hazards, provision of water supplies, components to be used, installation and testing of the system, maintenance, and the extension of existing systems, and identifies construction details of buildings which are the minimum necessary for satisfactory performance of sprinkler systems complying with this European Standard.

This European Standard does not cover water supplies to systems other than sprinklers. Its requirements can be used as guidance for other fixed firefighting extinguishing systems, provided that any specific requirements for other firefighting extinguishing supplies are taken into account.

This European Standard is intended for use by those concerned with purchasing, designing, installing, testing, inspecting, approving, operating and maintaining automatic sprinkler systems, in order that such equipment will function as intended throughout its life.

This European Standard is intended only for fixed fire sprinkler systems in buildings and other premises on land. Although the general principles might well apply to other uses (e.g. maritime use). For these other uses additional considerations should be taken into account.

The requirements are not valid for automatic sprinkler systems on ships, in aircraft, on vehicles and mobile fire appliances or for below ground systems in the mining industry.

Sprinkler system design deviations might be allowed when such deviations have been shown to provide a level of protection at least equivalent to this European Standard, for example by means of full-scale fire testing where appropriate, and where the design criteria have been fully documented.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

### 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

#### 3.1

##### **'A' gauge**

pressure gauge connected to a town main connection, between the supply pipe stop valve and the non-return valve

#### 3.2

##### **accelerator**

device that reduces the delay in operation of a dry alarm valve, or composite alarm valve in dry mode, by early detection of the drop in air or inert gas pressure on sprinkler operation

#### 3.3

##### **alarm test valve**

valve through which water might be drawn to test the operation of the water motor fire alarm and/or of any associated electric fire alarm

#### 3.4

##### **alarm valve**

non-return valve, of the wet, dry or composite type that also initiates the water motor fire alarm when the sprinkler installation operates
