Võtmesõnad: feathers, samples, sampling, stuffings

ICS 59.040

Descriptors: Feather, down, sampling, testing.

English version

Feather and down

Sampling in view of tests

Plumes et duvets – Échantillonnage en
vue d'essais

Federn und Daunen – Probenahme
für Prüfverfahren

This European Standard was approved by CEN on 1998-08-14.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, the Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and the United Kingdom.

Central Secretariat: rue de Stassart 36, B-1050 Brussels

Foreword

This European Standard has been prepared by Technical Committee CEN/TC 222 "Feather and down as filling material for any article, as well as finished articles filled with feather and down", the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by March 1999, and conflicting national standards shall be withdrawn at the latest by March 1999.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

Annex A is normative.

1 Scope

This European standard specifies a method for obtaining a representative laboratory bulk sample of a lot of feather materials and of feather materials in a manufactured product or of a manufactured product.

2 Normative references

This European standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

EN 20139 Textiles - Standard atmospheres for conditioning and testing (ISO 139:1973)

EN 20187 Paper, board and pulps - Standard atmosphere for conditioning and testing and procedure for monitoring the atmosphere and conditioning of samples (ISO 187:1990)

3 Definitions

For the purposes of this standard the following definitions apply:

3.1 lot (or consignment): All the containers of a feather material or of manufactured products of one defined type and quality delivered to one customer according to one consignment.

3.2 container: Units of packaging within the consignment (a carton, a case, a bale, etc.) the identification of which is quoted explicitly on the dispatch note. Containers can or can not contain packages.

3.3 package: Elementary unit (which can be unwound) within each container in the consignment.

3.4 package sample: Elementary unit selected at random from those of the lot, regarded as representative of it and from which individual samples are drawn.

3.5 individual sample: Manufactured article or portion of material drawn in order to prepare a laboratory bulk sample.

3.6 laboratory bulk sample: Manufactured article or portion of the lot taken to be representative of the whole, and which is available to the laboratory. The size and nature of the laboratory bulk sample should be sufficient to overcome adequately the variability of the bulk source and to facilitate ease of handling in the laboratory.
