EN IEC 60404-
16:2018/AC:2018-12

December 2018

ICS 17.220.20; 29.030

English Version

Magnetic materials - Part 16: Methods of measurement of the magnetic properties of Fe-based amorphous strip by means of a single sheet tester
(IEC 60404-16:2018/COR1:2018)

Matériaux magnétiques - Partie 16: Méthodes de mesure des propriétés magnétiques des bandes en alliage amorphe à base de fer à l'aide de l'essai sur tôle unique
(IEC 60404-16:2018/COR1:2018)

Magnetische Werkstoffe - Teil 16 : Verfahren zur Messung der magnetischen Eigenschaften von eisenbasiertem, amorphem Band unter Verwendung eines Tafelmessgerätes
(IEC 60404-16:2018/COR1:2018)

This corrigendum becomes effective on 21 December 2018 for incorporation in the English language version of the EN.

Corrections to the French version appear after the English text.

Les corrections portant sur la version française figurent après le texte anglais.

Replace Formula (2) with the following new formula:

$$J(t) = \frac{1}{N_2 A} \left\{ \int_0^t U_2(\tau) d\tau - \frac{1}{T} \int_0^T \left(\int_0^t U_2(\tau) d\tau \right) dt \right\} \quad (2)$$

Add, after Formula (2), at the end of the paragraph beginning with "where", the following line:

τ is an auxiliary time variable.

Replace Formula (3) with the following new formula:

$$H(t) = \frac{1}{\mu_0 (N_H A_H)} \left\{ \int_0^t U_H(\tau) d\tau - \frac{1}{T} \int_0^T \left(\int_0^t U_H(\tau) d\tau \right) dt \right\} \quad (3)$$

Add, after Formula (3), at the end of the paragraph beginning with "where", the following line:

τ is an auxiliary time variable.

Replace Formula (B.4) and the existing line of text below it with the following two new formulas and the new text between them:

$$h_j = h'_j - \frac{1}{n} \sum_{k=0}^{n-1} h'_k \quad (\text{B.4})$$

The second term of Formula (B.4) is the average over the length of a period which compensates for the integration constant. The signal h'_j is the result of the integration of the digitalized voltage measured at the H-coil which includes the integration constant and is to be calculated as follows:

$$h'_j = \frac{1}{\mu_0 f_s (N_H A_H)} \sum_{k=0}^j u_{Hk} \quad (\text{B.4A})$$

Replace Formula (B.5) and the line text before it with the following new line text and new formula:

The magnetic polarization $J(t)$ can be calculated by using

$$J(t) = \frac{1}{N_2 A} \left\{ \int_0^t U_2(\tau) d\tau - \frac{1}{T} \int_0^T \left(\int_0^t U_2(\tau) d\tau \right) dt \right\} \quad (\text{B.5})$$

Add the following text after the new Formula (B.5):

where

τ is an auxiliary time variable.
