

Corrigendum to HD 60364-4-444:2010

English version

444.1 Scope

To provide requirements and recommendations for electrical installations in order to avoid or reduce the impact of electromagnetic disturbances.

The rules of this part do not apply to systems that are wholly or partly under the control of public power supply companies (see scope of HD 60364-1:2008) although voltage and electromagnetic disturbances may be conducted or induced into electrical installations via these supply systems.

Applying the EMC-measures described by the standard can be seen as a part of good engineering practices to achieve EMC of fixed installations as required by the EMC-Directive 2004/108/EC.
