Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

The main task of ISO/IEC JTC 1 is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is called to the possibility that implementation of this standard may require the use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. ISO/IEEE is not responsible for identifying essential patents or patent claims for which a license may be required, for conducting inquiries into the legal validity or scope of patents or patent claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance or a Patent Statement and Licensing Declaration Form, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from ISO or the IEEE Standards Association.

ISO/IEC/IEEE 8802-1Q:2016/Cor.1:2017 was prepared by the LAN/MAN of the IEEE Computer Society (as IEEE 802.1Q-2014/Cor 1-2015). It was adopted by Joint Technical Committee ISO/IEC JTC 1, *Information technology, Subcommittee SC 6, Telecommunications and information exchange between systems*, in parallel with its approval by the ISO/IEC national bodies, under the "fast-track procedure" defined in the Partner Standards Development Organization cooperation agreement between ISO and IEEE. IEEE is responsible for the maintenance of this document with participation and input from ISO/IEC national bodies.

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Standards Documents.”

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854 USA

Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under U.S. and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every ten years. When a document is more than ten years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at <http://ieeexplore.ieee.org/xpl/standards.jsp> or contact IEEE at the address listed previously. For more information about the IEEE SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Participants

At the time this corrigendum was submitted to the IEEE-SA Standards Board for approval, the IEEE 802.1 Working Group had the following membership:

Glenn Parsons, Chair
John Messenger, Vice Chair and Chair, Maintenance Task Group
Tony Jeffree, Editor

Christian Boiger	Hal Keen	Jessy Rouyer
Paul Bottorff	Stephan Kehrer	Panagiotis Saltsidis
David Chen	Marcel Kiessling	Michael Seaman
Feng Chen	Philippe Klein	Daniel Sexton
Weiying Cheng	Jouni Korhonen	Johannes Specht
Rodney Cummings	Yizhou Li	Wilfried Steiner
Janos Farkas	Christophe Mangin	Patricia Thaler
Norman Finn	Tom McBeath	David Thornburg
Geoffrey Garner	James McIntosh	Jeremy Touve
Eric Gray	Hiroki Nakano	Paul Unbehagen
Craig Gunther	Bob Noseworthy	Karl Weber
Stephen Haddock	Donald R. Pannell	Brian Weis
Mark Hantel	Walter Pienciak	Jordon Woods
Marc Holness	Karen Randall	Helge Zinner
Michael Johas Teener	Maximilian Riegel	Juan Carlos Zuniga
	Dan Romascanu	

The following members of the individual balloting committee voted on this standard. Balloters may have voted for approval, disapproval, or abstention.

Iwan Adhicandra	Noriyuki Ikeuchi	Maximilian Riegel
Thomas Alexander	Sergiu Iordanescu	Robert Robinson
Butch Anton	Atsushi Ito	Benjamin Rolfe
Lee Armstrong	Tony Jeffree	Dan Romascanu
Stefan Aust	Michael Johas Teener	Jessy Rouyer
Christian Boiger	Adri Jovin	Bartien Sayogo
Nancy Bravin	Shinkyo Kaku	Michael Seaman
William Byrd	Piotr Karocki	Thomas Starai
Juan Carreon	Stuart Kerry	Eugene Stoudenmire
Rodney Cummings	Yongbum Kim	Walter Struppner
Janos Farkas	Mark Laubach	Michael Swearingen
Avraham Freedman	David Lewis	Patricia Thaler
Yukihiro Fujimoto	Arthur H. Light	Mark-Rene Uchida
David Gregson	William Lumpkins	Lorenzo Vangelista
Randall Groves	Michael Lynch	Dmitri Varsanofiev
Craig Gunther	Elvis Maculuba	George Vlantis
Stephen Haddock	Jonathon McLendon	Khurram Waheed
Jerome Henry	Richard Mellitz	Stephen Webb
Marco Hernandez	Charles Moorwood	Hung-Yu Wei
Guido Hiertz	Michael Newman	Natalie Wienckowski
Werner Hoelzl	Nick S.A. Nikjoo	Oren Yuen
Victor Hou	Satoshi Obara	Zhen Zhou
C. Huntley	Alon Regev	

When the IEEE-SA Standards Board approved this corrigendum on 5 December 2015, it had the following membership:

John D. Kulick, *Chair*
Jon Walter Rosdahl, *Vice Chair*
Richard H. Hulett, *Past Chair*
Konstantinos Karachalios, *Secretary*

Masayuki Ariyoshi
Ted Burse
Stephen Dukes
Jean-Philippe Faure

Introduction

This introduction is not part of IEEE Std 802.1Q-2014/Cor 1-2015, IEEE Standard for Local and metropolitan area networks—Bridges and Bridged Networks—Corrigendum 1: Technical and editorial corrections.

This corrigendum to IEEE Std 802.1Q-2014 corrects the small number of errors to the base text identified by the IEEE 802.1 maintenance activity. These changes are needed in order to correct technical and/or editorial errors in the existing text.

Contents

12. Bridge management	2

**IEEE Standard for
Local and metropolitan area networks—**

Bridges and Bridged Networks—

**Corrigendum 1: Technical and editorial
corrections**

(This corrigendum is based on IEEE Std 802.1QTM-2014.)

NOTE—The editing instructions contained in this amendment define how to merge the material contained here into the base document and its other amendments to form the new comprehensive standard.

Editing instructions are shown in ***bold italic***. Four editing instructions are used: change, delete, insert, and replace. ***Change*** is used to make corrections in existing text or tables. The editing instruction specifies the location of the change and describes what is being changed either by using ***strikethrough*** (to remove old material) and ***underline*** (to add new material). ***Delete*** removes existing material. ***Insert*** adds new material without disturbing the existing material. Insertions may require renumbering. If so, renumbering instructions are given in the editing instruction. ***Replace*** is used to make changes in figures or equations by removing the existing figure or equation and replacing it with a new one. Editing instructions, change markings, and this NOTE will not be carried over into future editions because the changes will be incorporated into the base standard.¹

IMPORTANT NOTICE: IEEE Standards documents are not intended to ensure safety, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

This IEEE document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

¹Notes in text, tables, and figures are given for information only, and do not contain requirements needed to implement the standard.

12. Bridge management

12.22 Stream Reservation Protocol (SRP) entities

12.22.5 SRP Reservations Table

Change row 5 of Table 12-17 as follows:

ieee8021FqtssDeltaBandwidth OBJECT-TYPE
SYNTAX     IEEE8021FqtssDeltaBandwidthValue
UNITS      "percent"
MAX-ACCESS read-write
STATUS     current
DESCRIPTION
    "The value of the deltaBandwidth parameter
for the traffic class.
This value is represented as a fixed point number
scaled by a factor of 1,000,000; i.e., 100,000,000
(the maximum value) represents 100%.
The default value of the deltaBandwidth parameter
for the highest numbered traffic class that supports
the credit-based shaper algorithm is 75%; for all
lower numbered traffic classes that support the
credit-based shaper algorithm the default value is 0%.

```

The value of this object MUST be retained across
reinitializations of the management system."

```

```

ieee8021SrpBridgeBaseMsrpLatencyMaxFrameSize OBJECT-TYPE
SYNTAX      Unsigned32
MAX-ACCESS  read-create
STATUS      current
DESCRIPTION
"The value of msrpLatencyMaxFrameSize parameter
which is used in the calculation of the maximum
latency through a Bridge. The maximum size is
defined to be 2000 octets by default, but may be
set to a smaller or larger value dependent on the
particular Bridge configuration. This parameter
does not imply any type of policing of frame size,
it is only used in the latency calculations.

```

The value of this object MUST be retained across
reinitializations of the management system."

```

}
 ::= { ieee8021SrpCompliances 1 }

END
```

IEEE Std 802.1Q™-2014/Cor 1-2015
IEEE Standard for Local and Metropolitan Area Networks—Bridges and Bridged Networks—
Corrigendum 1: Technical and editorial corrections

25. Support of the MAC Service by PBBNs

25.2 Customer service interface

Change the paragraph immediately before the NOTE as follows:

In all cases, segregation of different service instances is achieved at an interface wholly under the control of the backbone provider, and by verification of customer provided parameters that provide service instance selection. Stronger authentication and authorization of the attached customer systems ~~may can~~ be achieved by use of IEEE Std 802.1X.

32. Congestion notification protocol

32.14 RP procedures

32.14.4 ReceiveCnm

Change list item e) as follows:

- e) If the selected RP rate control state machine's rpEnabled variable is FALSE and is not held FALSE because rpgEnable (32.11.1) has the value FALSE, and the CNM's cnmQOffset field (33.4.5) is negative positive, then rpEnabled is reset to TRUE, the variable rpppCreatedRps (32.10.2) is incremented.

IEEE Std 802.1Q™-2014/Cor 1-2015
IEEE Standard for Local and Metropolitan Area Networks—Bridges and Bridged Networks—
Corrigendum 1: Technical and editorial corrections

33. Encoding of congestion notification PDUs

33.4 Congestion Notification Message PDU format

33.4.5 cnmQOffset

Change the first line as follows:

The twos-complement signed integer value of ~~the transmitting CP's (-1 × cpQOffset)~~ (32.8.7) ~~of the transmitting CP~~ in units of 64 octets.

35. Stream Reservation Protocol (SRP)

35.1 Multiple Stream Registration Protocol (MSRP)

35.1.2 Behavior of end stations

35.1.2.1 Talkers

Insert the following paragraph immediately following list item b):

A Talker Advertise shall not be declared if there are not sufficient bandwidth and resources available. If a Talker Advertise is being declared and the required bandwidth or resources become unavailable the Talker Advertise shall be withdrawn and a Talker Failed may be declared. A Talker is allowed to transition directly from a Talker Advertise to a Talker Failed without waiting for the Talker Advertise to be deregistered from the network (see 35.2.6).

35.2 Definition of the MSRP application

35.2.2 Definition of MRP elements

35.2.2.8 MSRP FirstValue definitions (stream reservations)

35.2.2.8.1 Structure definition

Change Figure 35-2 as follows:

Octet #	1	7	8	
	MAC Address		Unique ID	StreamID structure
Octet #	9	15	16	
	destination_address		vlan_identifier	DataFrameParameters structure
Octet #	17	19	20	
	MaxFrameSize	MaxIntervalFrames		TSpec structure
Octet #	21			
	Data Frame Priority (3 bits)	Rank (1 bit)	Reserved (4 bits)	PriorityAndRank structure
Octet #	22	25		
	Accumulated Latency			AccumulatedLatency structure
Octet #	26	34		
	Bridge ID System ID	Failure Code		FailureInformation structure

Figure 35-2—Format of the components of the reservation FirstValue fields

35.2.2.8.7 FailureInformation

Change the text of 35.2.2.8.7 and Table 35-6, and insert a NOTE, as follows:

At the point when a Talker Advertise Declaration is transformed into a Talker Failed Declaration, the **Bridge system** making the transformation adds information that indicates, to the Listeners registering the Talker Failed Declaration, the cause of the failure; and the identity of the **Bridge system** at which the failure occurred. The subcomponents of the FailureInformation include

- a) **The system identifier, which is the Bridge ID Identifier** (13.26.2) of the Bridge, **or the 48-bit MAC Address of the end station's port extended to 64-bits by prepending 16 bits of zero**, that changed the Declaration Type from Advertise to Failed.
- b) The Reservation Failure Code, which is represented by a single octet containing the value shown in Table 35-6.

NOTE—Bridge Identifiers are normally constructed from MAC Addresses that are unique in the bridged LAN but are not required to be constructed in that manner; therefore, there is a possibility of an end station MAC Address colliding with the Bridge ID.

Table 35-6—Reservation Failure Codes

Failure Code	Description of cause
1	Insufficient bandwidth
2	Insufficient BridgeSystem resources
3	Insufficient bandwidth for traffic class.
4	StreamID in use by another Talker
5	Stream destination_address already in use
6	Stream preempted by higher rank
7	Reported latency has changed
8	Egress port is not AVB capable ^a
9	Use a different destination_address (i.e., MAC DA hash table full)
10	Out of MSRP resources
11	Out of MMRP resources
12	Cannot store destination_address (i.e., BridgeSystem is out of MAC DA resources)
13	Requested priority is not an SR Class (3.231) priority
14	MaxFrameSize (35.2.2.8.4(a)) is too large for media
15	msrpMaxFanInPorts (35.2.1.4(f)) limit has been reached
16	Changes in FirstValue for a registered StreamID.
17	VLAN is blocked on this egress port (Registration Forbidden) ^b
18	VLAN tagging is disabled on this egress port (untagged set)
19	SR class priority mismatch

^aA device could choose to use the asCapable variable from IEEE Std 802.1AS™-2011 [B7], 10.2.4.1, to help determine if its neighboring device is AVB capable. If the asCapable variable is FALSE for a particular port, then the neighboring device is not a time-aware system and therefore not AVB capable.

^bThis Failure Code is never declared in a Talker Failed message since Talker attributes are not propagated on egress ports that have the associated VLAN blocked. The **BridgeSystem** can still be queried by other means to learn why the Talker attribute was not declared.

IEEE Std 802.1Q™-2014/Cor 1-2015
 IEEE Standard for Local and Metropolitan Area Networks—Bridges and Bridged Networks—
 Corrigendum 1: Technical and editorial corrections

Annex A

(normative)

PICS proforma—Bridge implementations²

A.37 Shortest Path Bridging (SPB)

Change row SPB-2 as follows:

SPB-2	Encode, decode, and validate <u>IS-IS Hello PDUs or</u> SPT BPDUs for the Agreement Protocol <u>(AP)</u> and support <u>Agreement Protocol AP</u> logic in IS-IS?	SPB:M	5.4.5, 28	Yes []	No []
-------	---	-------	-----------	---------	--------

²*Copyright release for PICS proforms:* Users of this standard may freely reproduce the PICS proforma in this annex so that it can be used for its intended purpose and may further publish the completed PICS.

Annex B**(normative)****PICS proforma—End station implementations****B.10 Stream Reservation Protocol (SRP)**

Change rows SRP-11 and SRP-12 as follows:

SRP-11	Does the implementation update the Failure Information Bridge ID end station MAC address and Code in the event of insufficient bandwidth or resources through a Bridge when a Talker Failed is declared?	M	35.2.2.8.7	Yes []	
SRP-12	Does the implementation create a Talker Failed in the event of insufficient bandwidth or resources through a Bridge ?	M O	35.2.4.3; 35.10. 35.1.2.1	Yes []	No []

DESCRIPTION
  "The LLDP Management Information Base extension module for
  IEEE 802.1 organizationally defined discovery information.

  In order to ensure the uniqueness of the LLDP-V2-MIB,

```

IEEE Std 802.1Q™-2014/Cor 1-2015
IEEE Standard for Local and Metropolitan Area Networks—Bridges and Bridged Networks—
Corrigendum 1: Technical and editorial corrections

lldpV2Xdot1MIB is branched from lldpV2Extensions using an Organizationally Unique Identifier (OUI) value as the node. An OUI is a 24 bit globally unique number assigned by the IEEE Registration Authority - see:

<http://standards.ieee.org/develop/regauth/oui/index.html>

Unless otherwise indicated, the references in this MIB module are to IEEE Std 802.1Q-2014.

Copyright (C) IEEE (2014). This version of this MIB module is published as D.5.5 of IEEE Std 802.1Q; see the standard itself for full legal notices."

REVISION "201512020000Z" -- December 2, 2015

DESCRIPTION

"Published as part of IEEE Std 802.1Q 2014 Cor-1.
Updated as a result of maintenance items #0132 and #0152"

REVISION "201412150000Z" -- December 15, 2014

DESCRIPTION

"Published as part of IEEE Std 802.1Q 2014 revision.
Cross references updated and corrected.
New tables lldpV2Xdot1RemVidUsageDigestV2Table
and lldpV2Xdot1RemManVidV2Table inserted; old
versions deprecated. New versions add an index for
lldpV2RemIndex. "

REVISION "201103250000Z" -- March 25, 2011

DESCRIPTION

"Published as part of IEEE Std 802.1Qaz-2011. Adds the DCBX
objects to the MIB module"

REVISION "201103230000Z" -- March 23, 2011

DESCRIPTION

"Published as part of IEEE Std 802.1Q-2011 revision.
This revision contains changes associated with
relocating the extension MIB from IEEE Std 802.1AB to
IEEE Std 802.1Q, minor tweaks to the text of the
DESCRIPTION statement above to fix references to
IEEE Std 802.1Q, updating of references to refer to
Annex D, and addition of object definitions for
Congestion Notification TLVs and corresponding
compliance statements."

REVISION "200906080000Z" -- June 08, 2009

DESCRIPTION

"Published as part of IEEE Std 802.1AB-2009 revision.
This revision incorporated changes to the MIB to
support the use of LLDP with multiple destination MAC
addresses, and to import the Link Aggregation TLV
from the 802.3 extension MIB"

-- OUI for IEEE 802.1 is 32962 (00-80-C2)

  STATUS        current
  DESCRIPTION
    "This TC describes the link aggregation status.

    The bit 'aggCapable(0)' indicates the link is capable of being aggregated if 1, not capable if 0.

    The bit 'aggEnabled(1)' indicates the link is currently in an aggregation if 1, not in an aggregation if 0.

    The bits 'portTypeLS(1)' and 'portTypeMS(2)' form the LS and MS bits of a Port Type value respectively:
    00 = no port type specified
    01 = transmitted from Aggregation Port
    10 = transmitted from Aggregator
    11 = transmitted from an Aggregator with a single Aggregation Port.

    The remaining bits are reserved for future standardization."
