About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 21 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

8.4	System function block (SF)	55
8.4.1	General	55
8.4.2	Assignment of unique system function ID (SFI).....	55
8.4.3	Implementing configurable transmission groups.....	55
8.5	Serial to network gateway function (SNGF)	55
8.5.1	General	55

8.5.2	Serial line output buffer management	56
8.5.3	Datagram output.....	56
8.5.4	Datagram output multi SF serial port.....	56
8.5.5	Handling malformed data received on serial line	57
8.6	Other network function (ONF)	58
8.7	Low level network	59
8.7.1	Electrical and mechanical requirements	59
8.7.2	Network protocol.....	59
8.7.3	IP address assignment for equipment	59
8.7.4	Multicast address range.....	59
8.8	Transport layer	59
8.9	Application layer	60
8.9.1	Application.....	60
8.9.2	Datagram header.....	60
8.9.3	Types of messages.....	60
8.9.4	TAG block parameters	60
8.9.5	General authentication.....	61
8.10	Error logging	62
8.11	Binary file transfer using UDP multicast – Single transmitter, multiple receiver	62
8.11.1	Sender process test.....	62
8.11.2	Receiver process test	63
8.11.3	Binary file descriptor test	64
8.11.4	Binary file transfer error logging.....	64
8.11.5	Maximum outgoing rate	65
8.12	PGN to network gateway function (PNGF).....	65
8.12.1	General	65
8.12.2	Output buffer management	65
8.12.3	Datagram output.....	65
8.12.4	PGN group	65
8.12.5	Address conflicts	65
8.13	System function ID resolution.....	65
8.14	Binary file transfer using TCP point-to-point.....	65
8.14.1	Test of transmit client	66
8.14.2	Test of receiver server.....	66
8.14.3	Maximum outgoing rate	67
8.14.4	TCP port and IP addresses.....	67
Annex A (normative)	Classification of IEC 61162-1 talker identifier mnemonics and sentences	68
A.1	General.....	68
A.2	Talker identifier mnemonic to transmission group mapping	68
A.3	List of all sentence formatters and the sentence type	70
Annex B (normative)	TAG block definitions	74
B.1	Validity.....	74
B.2	Valid TAG block characters.....	74
B.3	TAG block format.....	74
B.4	TAG block "hexadecimal checksum" (*hh).....	75
B.5	TAG block "line"	75
B.6	TAG block parameter-code dictionary	76

Annex C (normative) Reliable transmission of command-response pair messages	77
C.1 Purpose	77
C.2 Information exchange examples	77
C.3 Characteristics	77
C.4 Requirements	77
C.5 Data flow description	78
C.5.1 Heartbeat message	78
C.5.2 Command response pair	78
Annex D (informative) Compatibility between IEC 61162-450 nodes based on IEC 61162-450:2011 connected to network which uses methods based on IEC 61162- 450:2018	79
D.1 General	79
D.2 Alternative methods for compatibility	79
D.2.1 Use of IGMP proxy node	79
D.2.2 Use of virtual LAN (VLAN)	79
D.2.3 Use of static multicast switch configuration	80
Annex E (informative) Use of switch setup configuration to filter network traffic	81
Annex F (normative) Sentence to support SFI collision detection	82
F.1 General	82
F.2 SRP – System function ID resolution protocol	82
Bibliography	83
Figure 1 – Network topology example	15
Figure 2 – Ethernet frame example for a SBM from a rate of turn sensor	27
Figure 3 – Non re-transmittable sender process	40
Figure 4 – Re-transmittable sender process	42

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**MARITIME NAVIGATION AND RADIOCOMMUNICATION
EQUIPMENT AND SYSTEMS –
DIGITAL INTERFACES –****Part 450: Multiple talkers and multiple listeners –
Ethernet interconnection**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61162-450 has been prepared by IEC technical committee 80: Maritime navigation and radiocommunication equipment and systems.

This second edition of IEC 61162-450 cancels and replaces the first edition published in 2011 and Amendment 1:2016. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) network traffic filtering based on IGMP snooping added;
- b) network traffic balancing added;
- c) new encapsulation of IEC 61162-3 PGNs added;

- d) new alternative for binary file transfer added: TCP/IP based on Annex H of IEC 62388:2007 on radars;
- e) general authentication tag "a:" added to support managing of cyber security risk.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
80/880/FDIS	80/885/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61162 series, published under the general title *Maritime navigation and radiocommunication equipment and systems -Digital interfaces*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

MARITIME NAVIGATION AND RADIOCOMMUNICATION EQUIPMENT AND SYSTEMS – DIGITAL INTERFACES –

Part 450: Multiple talkers and multiple listeners – Ethernet interconnection

1 Scope

This part of IEC 61162 specifies interface requirements and methods of test for high speed communication between shipboard navigation and radiocommunication equipment as well as between such systems and other ship systems that need to communicate with navigation and radio-communication equipment. This document is based on the application of an appropriate suite of existing international standards to provide a framework for implementing data transfer between devices on a shipboard Ethernet network.

This document specifies an Ethernet based bus type network where any listener can receive messages from any sender with the following properties.

- This document includes provisions for multicast distribution of information formatted according to IEC 61162-1, for example position fixes and other measurements, as well as provisions for transmission of general data blocks (binary file), for example between radar and VDR, and also includes provisions for multicast distribution of information formatted according to IEC 61162-3, for example position fixes and other measurements.
- This document is limited to protocols for equipment (network nodes) connected to a single Ethernet network consisting only of OSI level one or two devices and cables (Network infrastructure).
- This document provides requirements only for equipment interfaces. By specifying protocols for transmission of IEC 61162-1 sentences, IEC 61162-3 PGN messages and general binary file data, these requirements will guarantee interoperability between equipment implementing this document as well as a certain level of safe behaviour of the equipment itself.
- This document permits equipment using other protocols than those specified in this document to share a network infrastructure, provided that it is supplied with interfaces which satisfy the requirements described for ONF.
- This document includes provisions for filtering of the network traffic in order to limit the amount of traffic to manageable level for each individual equipment.

This document does not contain any system requirements other than the ones that can be inferred from the sum of individual equipment requirements. An associated standard, IEC 61162-460, further addresses system requirements.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
