Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of Standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 188, *Small craft*, SC 2, *Engines and propulsion systems*.

This second edition of ISO 16147 cancels and replaces the first edition (ISO 16147:2002), of which it constitutes a technical revision. It also incorporates the amendment ISO 16147:2002/Amd 1:2013.

The main changes compared to the previous edition are as follows:

- in 4.2, requirements for access to fuel and electrical components have been added;
- in 4.3, requirements for exposed operating or hot components have been added;
- in 4.4, requirements that installation of fuel and electrical components shall take account of the risk and spread of fire have been added;
- in <u>5.3.1</u>, requirements and temperature requirements on material in low pressure fuel lines have been deleted;
- in <u>5.4</u>, requirements on oil filters have been added;
- in <u>6.1.2</u>, requirements that AC installations shall meet the requirements in IEC 60092–507 or ISO 13297 have been added;
- in <u>6.1.3</u>, requirements that electronic shift and throttle components if engine mounted and part of engine delivery from manufacturer shall meet the requirements in ISO 25197 have been added;
- in <u>Clause 7</u>, requirements to state return fuel temperature/energy and flow in installation manual have been deleted and replaced by information about fuel line dimensions.

Small craft — Inboard diesel engines — Engine-mounted fuel, oil and electrical components

1 Scope

This document establishes requirements for the design and installation of engine-mounted fuel, oil and electrical components on diesel inboard-mounted engines for minimizing fuel leakage, risk of electric shock and the risk of and/or the spread of fire on small craft of hull length up to 24 m.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 7840:2013, Small craft — Fire-resistant fuel hoses

ISO 10088:2001, Small craft — Permanently installed fuel systems and fixed fuel tanks

ISO 10133, Small craft — Electrical systems — Extra-low-voltage d.c. installations

ISO 13297, Small craft — Electrical systems — Alternating current installations

ISO 25197, Small craft — Electrical/electronic control systems for steering, shift and throttle

IEC 60529, Degrees of protection provided by enclosures (IP CODE)

IEC 60092-507, Electrical Installations in Ships — Part 507: Small vessels

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at http://www.electropedia.org/
- ISO Online browsing platform: available at https://www.iso.org/obp

3.1

engine-mounted

component fixed to the marine inboard engine and which remains while the engine is in operation

3.2

diesel fuel

hydrocarbon fuel or blends of hydrocarbon fuels including bio-fuel which are liquids at atmospheric pressure and are used in compression-ignition engines

3.3

diesel engine

internal combustion engine that uses the heat of highly compressed air to ignite a spray of diesel fuel introduced after the start of the compression stroke
