Foreword ..... **vi**
1 Scope **1**
2 Normative references **1**
3 Terms and definitions **1**
4 Sampling theory **4**
4.1 General 4
4.2 Total variance 4
4.3 Sampling-stage method of estimating sampling and total variance 6
4.4 Simplified method of estimating sampling and total variance 9
4.5 Interleaved sample method of measuring total variance 10
5 Establishing a sampling scheme **12**
6 Mass of increment **17**
6.1 General 17
6.2 Mass of increment for falling-stream samplers 17
6.3 Mass of increment for cross-belt samplers 17
6.4 Mass of increment for manual sampling from stationary lots 17
6.4.1 Primary increments 17
6.4.2 Mass of secondary and subsequent increments 18
6.5 Mass of increment for stopped-belt reference sampling 18
7 Methods of sampling from concentrate streams **18**
7.1 General 18
7.2 Mass-basis systematic sampling 18
7.2.1 General 18
7.2.2 Sampling interval 19
7.2.3 Sample cutter 19
7.2.4 Taking of primary increments 19
7.2.5 Constitution of subsamples and lot samples 19
7.2.6 Types of division 20
7.2.7 Division of increments 20
7.2.8 Division of subsamples 20
7.2.9 Division of lot samples 20
7.3 Time-basis systematic sampling 21
7.3.1 General 21
7.3.2 Sampling interval 21
7.3.3 Sample cutter 21
7.3.4 Taking of primary increments 22
7.3.5 Constitution of subsamples and lot samples 22
7.3.6 Types of division 22
7.3.7 Division of increments and subsamples 22
7.3.8 Division of lot samples 22
7.4 Stratified random sampling 22
7.4.1 Fixed mass intervals 22
7.4.2 Fixed time intervals 23
8 Mechanical sampling of concentrate streams **23**
8.1 General 23
8.2 Design of the sampling system 23
8.2.1 Safety of operators 23
8.2.2 Location of sample cutters 23
8.2.3 Provision for interleaved sampling 23
8.2.4 Provision for stratified random sampling 24
8.2.5 Checking precision and bias 24
8.2.6 Avoiding bias 24

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 183, *Copper, lead, zinc and nickel ores and concentrates*.

This third edition cancels and replaces the second edition (ISO 12743:2006), which has been technically revised.

The main changes to the previous edition are as follows:

— The minimum cutting aperture for cross-belt cutters in 8.3.2.3 i) has been reduced to 30 mm.

— A NOTE has been added to 15.4.10 indicating that ribbons with smaller dimensions can be formed depending on the mass of sample to be divided, and that the ribbon division method is particularly suitable for dividing chemical analysis samples.

— The requirements for preparation of chemical analysis samples in 16.2 have been expanded.

Copper, lead, zinc and nickel concentrates — Sampling procedures for determination of metal and moisture content

WARNING — This document can involve hazardous materials, operations and equipment. It is the responsibility of the user of this document to establish appropriate health and safety practices and to ensure compliance with any other restrictions.

This document is a preview generated by EVS

1 Scope

This document sets out the basic methods for sampling copper, lead, zinc and nickel concentrates from moving streams and stationary lots, including stopped-belt sampling, to provide samples for chemical analysis, physical testing and determination of moisture content, in accordance with the relevant International Standards. Where the concentrates are susceptible to significant oxidation or decomposition, a common sample that is sufficiently representative, i.e. unbiased and sufficiently precise, is used for moisture determination and chemical analysis to eliminate bias (see ISO 10251). Any large agglomerates (>10 mm) present in the primary sample are crushed prior to further sample processing. Sampling of concentrates in slurry form is specifically excluded from this document.

Stopped-belt sampling is the reference method for collecting concentrate samples against which mechanical and manual-sampling procedures can be compared. Sampling from moving streams is the preferred method. Both falling-stream and cross-belt samplers are described.

Sampling from stationary lots is used only where sampling from moving streams is not possible. The procedures described in this document, for sampling from stationary lots, only minimize some of the systematic sampling errors.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 10251, *Copper, lead, zinc and nickel concentrates — Determination of mass loss of bulk material on drying*

ISO 12744, *Copper, lead, zinc and nickel concentrates — Experimental methods for checking the precision of sampling*

ISO 13292, *Copper, lead, zinc and nickel concentrates — Experimental methods for checking the bias of sampling*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at https://www.iso.org/obp

— IEC Electropedia: available at http://www.electropedia.org/
