Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by ISO/TC 41, *Pulleys and belts (including veebelts)*, Subcommittee SC 3, *Conveyor belts*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

This second edition cancels and replaces the first edition (ISO 21183-2:2005), which has been technically revised.

The main change compared to the previous edition is that Japanese terms have been added.

A list of all parts in the ISO 21183 series can be found on the ISO website.

Introduction

ISO 5284 contains a list of equivalent terms that apply to conveyor belts in general. Many of these terms are also applicable to light conveyor belts without modification; but these are not included in this document.

This document contains only terms applicable to light conveyor belts that are either not included in ISO 5284 or which are included in ISO 5284 but need modification — in one or more of the languages — for them to be applicable to light conveyor belts.

Light conveyor belts —

Part 2: List of equivalent terms

1 Scope

This document establishes a list of equivalent terms relating to light conveyor belts.

NOTE In addition to terms used in the three official ISO languages (English, French and Russian), this document gives the equivalent terms in German, Spanish, Italian and Japanese; these are published under the responsibility of the member bodies for Germany (DIN), Spain (AENOR), Italy (UNI) and Japanese (JISC). However, only the terms given in the official languages can be considered as ISO terms.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

3.1

light conveyor belt

conveyor belt predominantly used for the indoor transport of unit loads (for example: parcels, boxes, cans, containers, luggage, industrial goods of all kinds and foodstuffs)

Note 1 to entry: Additional information on the applications of light conveyor belts is given in ISO 21183-1.

4 List of equivalent terms

[Table 1](#) gives the equivalent terms in English, French, Russian, German, Spanish, Italian and Japanese.
