

Dependability reviews during the life cycle

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

See Eesti standard EVS-EN IEC 62960:2020 sisaldab Euroopa standardi EN IEC 62960:2020 ingliskeelset teksti.	This Estonian standard EVS-EN IEC 62960:2020 consists of the English text of the European standard EN IEC 62960:2020.
Standard on jõustunud sellekohase teate avaldamisega EVS Teatajas.	This standard has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation.
Euroopa standardimisorganisatsioonid on teinud Euroopa standardi rahvuslikele liikmetele kättesaadavaks 08.05.2020.	Date of Availability of the European standard is 08.05.2020.
Standard on kättesaadav Eesti Standardikeskusest.	The standard is available from the Estonian Centre for Standardisation.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile standardiosakond@evs.ee.

English Version

Dependability reviews during the life cycle (IEC 62960:2020)

Revue de la sûreté de fonctionnement au cours du cycle
de vie
(IEC 62960:2020)

Zuverlässigkeitsbewertungen während des Lebenszyklus
(IEC 62960:2020)

This European Standard was approved by CENELEC on 2020-04-22. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

The text of document 56/1874/FDIS, future edition 1 of IEC 62960, prepared by IEC/TC 56 "Dependability" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 62960:2020.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2021-01-22
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2023-04-22

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Endorsement notice

The text of the International Standard IEC 62960:2020 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standards indicated:

IEC 60300-1:2014	NOTE	Harmonized as EN 60300-1:2014 (not modified)
IEC 60300-3-3:2017	NOTE	Harmonized as EN 60300-3-3:2017 (not modified)
IEC 62741:2015	NOTE	Harmonized as EN 62741:2015 (not modified)
IEC 60812	NOTE	Harmonized as EN IEC 60812
IEC 61025:2006	NOTE	Harmonized as EN 61025:2007 (not modified)
IEC 62402:2019	NOTE	Harmonized as EN IEC 62402:2019 (not modified)
IEC 62740:2015	NOTE	Harmonized as EN 62740:2015 (not modified)
IEC 61014:2003	NOTE	Harmonized as EN 61014:2003 (not modified)
IEC 61508-1:2010	NOTE	Harmonized as EN 61508-1:2010 (not modified)
IEC 60706-2:2006	NOTE	Harmonized as EN 60706-2:2006 (not modified)
IEC 61078:2016	NOTE	Harmonized as EN 61078:2016 (not modified)
IEC 62853:2018	NOTE	Harmonized as EN IEC 62853:2018 (not modified)

INTERNATIONAL ELECTROTECHNICAL COMMISSION

DEPENDABILITY REVIEWS DURING THE LIFE CYCLE

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62960 has been prepared by IEC technical committee 56: Dependability.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
56/1874/FDIS	56/1878/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

Dependability is the ability to perform as and when required. Dependability has many attributes but is usually characterized in terms of reliability, maintainability, supportability (including maintenance and support) and availability. These attributes are subject to change over the life cycle and can benefit from regular review.

Benefits of dependability review throughout the life cycle include:

- discovering and mitigating or eliminating weaknesses in the early life cycle stages before they manifest as dependability problems in later stages;
- identifying and treating problems which might occur later in the life cycle, and providing feedback to prevent their recurrence and to adapt systems to changes in environment and other factors;
- providing assurance of dependability and of the systems and processes that aim to achieve dependability;
- continually improving the dependability of the system in order to maintain or improve a commercial advantage.

Systems are becoming increasingly complex and constantly changing. This raises specific problems that need attention. Systems are changing in the following ways. A system is often developed, and/or utilized, in organizations across national borders and industry sectors. Changes such as legislation affecting one country or industry sector may necessitate a change to the system. System requirements can also change over time as technology, environmental conditions and societal demands change.

Dependability reviews are mainly used for large systems, but even small products such as mobile phones are complicated systems that may require dependability reviews.

Organizations involved in different parts of the life cycle might not be able to share a common purpose. For example, an engineering design company during the development and realization stages may not be able to fully anticipate the needs of stakeholders at the utilization stage. More generally, it is becoming increasingly difficult to predict at some earlier stage potential dependability problems that can occur at a later life cycle stage. Dependability reviews carried out at appropriate points during the life cycle can assist in addressing all of the above issues.

This document provides guidance on dependability reviews as part of an organization's technical review processes. It provides a coherent set of principles for dependability reviews which could be useful in addition to, and in support of, general monitoring and dependability assurance carried out by various organizations at different life cycle stages.

In many cases dependability aspects of a system are covered in other reviews such as design reviews or manufacturability reviews. In these cases, the procedures given in this document can be applied. The informative annexes can be used as checklists to cover all technical relevant aspects.

Dependability reviews described in this document are a key part of a dependability management system as described in IEC 60300-1.
