## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see <a href="https://www.iso.org/directives">www.iso.org/directives</a>).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see <a href="http://www.iso.org/patents">www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">http://www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">http://www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">http://www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">http://www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">http://www.iso.org/patents</a>) or the IEC list of patent declarations received (see <a href="http://www.iso.org/patents">http://www.iso.org/patents</a>) or the list of patent declarations received (see <a href="http://www.iso.org/patents">http://www.iso.org/patents</a>) or the list of patents received (see <a href="http://www.iso.org/paten

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see <u>www.iso.org/</u><u>iso/foreword.html</u>.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

A list of all parts in the ISO/IEC 21122 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at <u>www.iso.org/members.html</u>.

# Information technology — JPEG XS low-latency lightweight image coding system —

# Part 4: Conformance testing

#### 1 Scope

This document specifies the framework, concepts, methodology for testing, and criteria to be achieved to claim conformance to multiple parts of the ISO/IEC 21122 series. It lists the conformance testing procedures.

This document specifies:

- Conformance testing procedures for decoders implementing ISO/IEC 21122-1.
- Conformance testing procedures for decoders implementing ISO/IEC 21122-3.
- Tests to check codestreams for conformance to ISO/IEC 21122-1. As such, it provides means to test whether encoder implementations generate syntactically correct codestreams, and whether codestreams generated by such implementations follow the requirements of a particular profile, level and sublevel, and the buffer model implied by them.
- Tests to check files for conformance to ISO/IEC 21122-3.
- Conformance testing procedures that allow testing whether codestreams conform to any of the profiles specified in ISO/IEC 21122-2.
- Conformance testing procedures that allow testing whether codestreams conform to the buffer model specified in ISO/IEC 21122-2 as part of a profile, level and sublevel.
- Codestreams, decoded images, and error metrics to be used within the decoder testing procedures.
- A buffer model test.
- Abstract test suites.

This document does not specify:

- Testing the reconstruction of a full resolution image from a subsampled image format. In particular, upsampling from 4:2:2 to 4:4:4 sampling is a non-normative extension and as such its testing is beyond the scope of this document.
- Testing the conversion of the sample values reconstructed by an ISO/IEC 21122-3 decoder to the target colour space by means of the colour specification box of ISO/IEC 21122-3.
- Testing of the composition of background and foreground for images reconstructed from ISO/IEC 21122-3 files or codestreams.
- Acceptance testing: the process of determining whether an implementation satisfies acceptance criteria and enables the user to determine whether or not to accept the implementation. This includes the planning and execution of several kinds of tests (e.g. functionality, quality, and speed performance testing) that demonstrate that the implementation satisfies the user requirements.
- Performance testing: measures the performance characteristics of an implementation under test (IUT) such as its throughput, responsiveness, etc. under various conditions.

 Robustness testing: the process of determining how well an implementation is able to conceal problems from attempting to reconstruct an image from an ill-formed codestream.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 21122-1, Information technology — JPEG XS low-latency lightweight image coding system — Part 1: Core coding system

ISO/IEC 21122-2, Information technology — JPEG XS low-latency lightweight image coding system — Part 2: Profiles and buffer models

ISO/IEC 21122-3, Information technology — JPEG XS low-latency lightweight image coding system — Part 3: Transport and container formats

#### 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 21122-3 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <a href="https://www.iso.org/obp">https://www.iso.org/obp</a>
- IEC Electropedia: available at <u>http://www.electropedia.org/</u>

#### 3.1

#### ASCII

American Standard Code for Information Interchange

binary encoding of 7-bit characters

Note 1 to entry: This encoding is as defined by ISO/IEC 646.

#### 3.2

ETS

#### executable test suite

set of executable test cases in the form of codestreams that are input into an implementation under test

#### 3.3

#### IUT

#### implementation under test

implementation that is being evaluated for conformance

#### 3.4

#### JPEG XS file

sequence of bytes encoding an image in the JXS file format

Note 1 to entry: This format is specified in ISO/IEC 21122-3.

#### 3.5

#### procedure

set of steps which accomplishes one of the tasks which comprise an encoding or decoding process

#### 3.6

#### TCS

#### test codestream set

(sub-)set of codestreams that are input to an implementation under test for a particular test purpose
