### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

67 000 electrotechnical terminology entries in English and French extracted from the Terms and definitions clause of IEC publications issued between 2002 and 2015. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

## CONTENTS

FOREWORD .....	11
INTRODUCTION .....	13
1 Scope .....	14
2 Normative references .....	14
3 Terms and definitions .....	15
4 Abbreviated terms .....	16
5 Overview of the IEC 61850 series concepts .....	17
5.1 Objective .....	17
5.2 Topology and communication functions of substation automation systems .....	18
5.3 The information models of substation automation systems .....	19
5.4 Applications modelled by logical nodes defined in IEC 61850-7-4 .....	21
5.5 The semantic is attached to data .....	24
5.6 The services to exchange information .....	26
5.7 Services mapped to concrete communication protocols .....	28
5.8 The configuration of the automation system .....	28
5.9 Summary .....	29
6 Modelling approach of the IEC 61850 series .....	30
6.1 Decomposition of application functions and information .....	30
6.2 Creating information models by stepwise composition .....	32
6.3 Example of an IED composition .....	34
6.4 Information exchange models .....	35
6.4.1 General .....	35
6.4.2 Output model .....	36
6.4.3 Input model .....	40
6.4.4 Model for statistical and historical statistical data .....	50
6.4.5 Model for system functions .....	53
7 Application view .....	55
7.1 General .....	55
7.2 First modelling step – Logical nodes and data .....	57
7.3 Mode and behaviour of a logical node .....	60
7.4 Use of measurement ranges and alarms for supervision functions .....	60
7.5 Data used for limiting the access to control actions .....	61
7.6 Data used for blocking functions described by logical nodes .....	61
7.7 Data used for logical node inputs/outputs blocking (operational blocking) .....	61
7.7.1 General .....	61
7.7.2 Blocking incoming commands .....	62
7.7.3 Blocking process outputs .....	62
7.7.4 Blocking the communication of status outputs updates .....	62
7.8 Data used for testing .....	63
7.8.1 General .....	63
7.8.2 Multicast signals used for simulation .....	63
7.8.3 Input signals used for testing .....	64
7.8.4 Test mode .....	66
7.9 Logical node used for extended logging functions .....	66
8 Device view .....	67

8.1	General.....	67
8.2	Second modelling step – logical device model .....	68
8.2.1	The logical device concept.....	68
8.2.2	The device nameplate.....	69
8.2.3	Gateways and proxies.....	70
8.2.4	Logical devices for monitoring external device health.....	74
8.2.5	Logical devices management hierarchy.....	74
9	Communication view.....	76
9.1	General.....	76
9.2	The service models of the IEC 61850 series .....	76
9.3	The virtualisation .....	78
9.4	Basic information exchange mechanisms .....	79
9.5	The client-server building blocks.....	81
9.5.1	Server.....	81
9.5.2	Client-server roles .....	82
9.6	Logical nodes communicate with logical nodes .....	83
9.7	Interfaces inside and between devices .....	84
10	Where physical devices, application models and communication meet.....	85
11	Relationships between IEC 61850-7-2, IEC 61850-7-3 and IEC 61850-7-4 .....	86
11.1	Refinements of class definitions.....	86
11.2	Example 1 – Logical node and data object class .....	87
11.3	Example 2 – Relationship of IEC 61850-7-2, IEC 61850-7-3, and IEC 61850-7-4 ..	91
12	Formal specification method .....	93
12.1	Notation of ACSI classes .....	93
12.2	Class modelling .....	93
12.2.1	Overview .....	93
12.2.2	Common data class .....	95
12.2.3	Logical node class .....	99
12.3	Service parameters tables .....	101
12.4	Referencing instances .....	102
13	Namespaces.....	105
13.1	General.....	105
13.2	Namespaces defined in the IEC 61850-7-x series .....	106
13.3	Namespaces dependencies .....	110
13.3.1	General.....	110
13.3.2	Basic namespaces dependencies .....	110
13.3.3	Other namespaces dependencies .....	112
13.4	Specification of namespaces.....	113
13.5	Attributes for references to namespaces .....	113
13.5.1	General.....	113
13.5.2	Attribute for logical device namespace (IdNs) .....	114
13.5.3	Attribute for logical device basic namespace (LLN0.NamPIt.InNs).....	114
13.5.4	Attribute for logical node namespace (InNs).....	115
13.5.5	Attribute for data namespace (dataNs).....	115
13.5.6	Attribute for common data class namespace (cdcNs) .....	115
13.5.7	Attribute for naming a common data class name (cdcName) .....	115
13.6	Deprecation of namespaces .....	116
14	Common rules for new version of classes and for extension of object classes .....	116

14.1	General.....	116
14.2	Basic rules.....	116
14.2.1	General.....	116
14.2.2	Use of optional information .....	119
14.2.3	General rules for enumerations types and enumeration-based data objects and attributes.....	119
14.3	Rules for extensions within private namespace .....	119
14.3.1	Rules for LN classes .....	119
14.3.2	New LN classes .....	120
14.3.3	Rules for Common Data Classes .....	120
14.3.4	Rules for enumeration types and enumeration-based data objects and attributes .....	121
14.4	Extensions made within product standard namespaces.....	121
14.5	Extensions made within transitional namespaces.....	121
14.6	Extensions made within basic and domain namespaces.....	121
14.7	Multiple instances of LN classes for dedicated and complex functions .....	122
14.7.1	Example for time overcurrent .....	122
14.7.2	Example for PDIS .....	122
14.7.3	Example for power transformer .....	122
14.7.4	Example for auxiliary network .....	122
14.8	Specialisation of data by use of number extensions .....	123
14.9	Examples for new LNs .....	123
14.10	Example for new Data.....	123
15	Compatibility between different versions of the standard .....	124
Annex A	(informative) Overview of logical nodes and data .....	125
A.1	Compatible logical node classes and data classes (IEC 61850-7-4) .....	125
A.1.1	List of LN groups (IEC 61850-7-4) .....	125
A.1.2	LN classes (IEC 61850-7-4).....	125
A.1.3	Data object classes (IEC 61850-7-4).....	125
A.2	Common data class specifications (IEC 61850-7-3) .....	125
Annex B	(informative) Allocation of data to logical nodes .....	127
Annex C	(informative) Use of the substation configuration language (SCL) .....	130
C.1	General.....	130
C.2	SCL and options in logical nodes .....	130
C.3	SCL and options in data .....	131
Annex D	(xxx) .....	132
Annex E	(informative) Relation between logical nodes and PICOMs .....	133
Annex F	(informative) Mapping the ACSI to real communication systems.....	134
F.1	General.....	134
F.1.1	Mapping example (IEC 61850-8-1).....	136
Annex G	(normative) LGOS/LSVS engineering .....	142
G.1	General.....	142
G.2	LGOS/LSVS engineering by the ICT .....	143
G.3	LGOS/LSVS engineering by the SCT .....	144
Annex H	(normative) GOOSE/SMV Subscription Configuration .....	146
H.1	General.....	146
H.2	SCT supplied input binding workflow.....	147
H.3	ICT supplied input binding (for later binding).....	148

Annex I (informative) Specification of namespaces for Edition 3 .....	149
I.1 Namespaces dependencies .....	149
I.1.1 General.....	149
I.1.2 Namespaces dependencies .....	149
I.2 Example 2 – Standardized data objects used in standardized LNs .....	150
I.3 Example 3 – Edition 2 device: standardized data object introduced in IEC61850-7-4:2007B .....	151
I.4 Example 4 – Edition 2 device: standardized LN introduced in IEC61850-7-4:2007B .....	152
I.5 Example 5 – Edition 1 device: Logical nodes in technical reports .....	153
I.6 Example 6- Edition 2.1 device: Logical nodes in technical reports defining new CDCs.....	155
I.7 Example 7- Edition 2.1 device: devices for product family standards .....	156
I.8 Example 8 – Standardized logical nodes introduced by other domain applications .....	157
I.9 Example 9 – Standardized logical nodes introduced by other domain applications than moved to IEC 61850-7-4 .....	159
Annex J (normative) Use case scenarios examples for clarifying the common rules of Clause 14 .....	162
J.1 General.....	162
J.2 Example 1 – Private LN using standardized DOs .....	162
J.3 Example 2 – Standardized data objects used in standardized LNs .....	163
J.4 Example 3 – Edition 2 device: standardized data object introduced in IEC61850-7-4:2007B .....	163
J.5 Example 4 – Edition 2 device: standardized LN introduced in IEC61850-7-4:2007B .....	164
J.6 Example 5 – Edition 1 device: Logical nodes in technical reports .....	165
J.7 Example 6- Edition 2.1 device: Logical nodes in technical reports defining new CDCs.....	167
J.8 Example 7- Edition 2.1 device: devices for product family standards .....	168
J.9 Example 8 – Standardized logical nodes introduced by other domain applications .....	169
J.10 Example 9 – Standardized logical nodes introduced by other domain applications than moved to IEC 61850-7-4 .....	171
Annex K (normative) General requirements and recommendations regarding compatibility issues between different versions of IEC 61850.....	174
K.1 Overview.....	174
K.1.1 General.....	174
K.1.2 Definitions (to go to part 2): .....	174
K.1.3 Introduction to compatibility discussion .....	175
K.1.4 Assumptions .....	175
K.1.5 Generic rules .....	176
K.1.6 Overview on use cases .....	177
K.2 Use cases related to the data model .....	181
K.2.1 Use case 1: Add new type .....	181
K.2.2 Use case 2: Add new FC.....	181
K.2.3 Use case 3: Extend CDC with elements of existing types and FCs .....	182
K.2.4 Use case 4: Add a new DataObject (DO) based on new CDCs .....	183
K.2.5 Use case 5: Add a new DO based on existing CDCs .....	184
K.2.6 Use case 6: Rename a DO.....	184
K.2.7 Use case 7: Rename a DA, subDO or subDA .....	184

K.2.8	Use case 8: Deprecation of a FC .....	185
K.2.9	Use case 9: Deprecation of a DA .....	186
K.2.10	Use case 10: Removal of a DA .....	186
K.2.11	Use case 11: Deprecation of a DO .....	187
K.2.12	Use case 12: Use a weaker presence condition .....	187
K.2.13	Use case 13: Use a stronger presence condition .....	188
K.2.14	Use case 14: Extend Enumeration List with an enumerated value .....	188
K.2.15	Use case 15: Modification of an Enumerated value .....	189
K.2.16	Use case 16: Deprecation of an Enumerated value .....	190
K.2.17	Use case 17: Extension of a PACKED LIST .....	190
K.2.18	Use case 18: Extend Name Length .....	190
K.3	Use cases related to the services I.....	191
K.3.1	Use case 30: Add new type.....	191
K.3.2	Use case 31: Using new control block class .....	192
K.3.3	Use case 32: Using new services .....	192
K.3.4	Use case 33: Extending control block class with an attribute of existing type .....	193
K.3.5	Use case 34: Rename a service parameter not associated with a control block attribute .....	193
K.3.6	Use case 35: Removing / Deprecating Control Block Classes .....	193
K.3.7	Use case 36: Using a stronger presence condition.....	194
	Bibliography.....	195
	Figure 1 – Relations between modelling and mapping parts of the IEC 61850 series .....	17
	Figure 2 – Sample substation automation topology .....	19
	Figure 3 – Modelling approach (conceptual).....	20
	Figure 4 – Logical node information categories .....	23
	Figure 5 – Build-up of devices (principle) .....	23
	Figure 6 – Position information depicted as a tree (conceptual) .....	24
	Figure 7 – Service excerpt .....	27
	Figure 8 – Example of communication mapping .....	28
	Figure 9 – Summary .....	30
	Figure 10 – Decomposition and composition process (conceptual).....	31
	Figure 11 – XCBR1 information depicted as a tree .....	33
	Figure 12 – Example of IED composition.....	35
	Figure 13 – Output and input model (principle).....	36
	Figure 14 – Output model (step 1) (conceptual) .....	37
	Figure 15 – Output model (step 2) (conceptual) .....	38
	Figure 16 – GSE output model (conceptual).....	38
	Figure 17 – Setting data (conceptual) .....	39
	Figure 18 – Input model for analogue values (step 1) (conceptual) .....	41
	Figure 19 – Range and deadbanded value (conceptual).....	42
	Figure 20 – Input model for analogue values (step 2) (conceptual) .....	43
	Figure 21 – Reporting and logging model (conceptual).....	44

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### COMMUNICATION NETWORKS AND SYSTEMS FOR POWER UTILITY AUTOMATION –

#### Part 7-1: Basic communication structure – Principles and models

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

**This consolidated version of the official IEC Standard and its amendment has been prepared for user convenience.**

**IEC 61850-7-1 edition 2.1 contains the second edition (2011-07) [documents 57/1121/FDIS and 57/1145/RVD] and its amendment 1 (2020-08) [documents 57/2201/FDIS and 57/2221/RVD].**

International Standard IEC 61850-7-1 has been prepared by IEC technical committee 57: Power systems management and associated information exchange.

This second edition constitutes a technical revision.

Compared to the first edition, this second edition introduces:

- the model for statistical and historical statistical data,
- the concepts of proxies, gateways, LD hierarchy and LN inputs,
- the model for time synchronisation,
- the concepts behind different testing facilities,
- the extended logging function.

It also clarifies the following points:

- the use of numbers for data extension,
- the use of namespaces,
- the mode and behaviour of a logical node,
- the use of range and deadbanded values,
- the access to control actions and others.

Compared to the second edition, this first revision of the second edition:

- provides clarifications and corrections to the second edition of IEC 61850-7-1, based 55 on the tissues = {828, 874, 948, 1060, 1072, 1129, 1151, 1196, 1251, 1268, 1312, 1396, 1437, 1468, 1491};
- re-edit the Clause 8.2.3 on gateways and proxies;
- re-edit the complete Clauses 13 and 14 about namespaces and rules for extension of object classes;
- include three new normative annexes respectively for LGOS/LSVS engineering (G), GOOSE/SMV Subscription Configuration (H) and use case scenarios examples for clarifying the common rules of Clause 14 (J);
- introduces in the informative annex I, the concept of decoupling domain namespaces from basic namespaces in edition 3 of this document;

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61850 series, under the general title: *Communication networks and systems for power utility automation*, can be found on the IEC website.

The committee has decided that the contents of the base publication and its amendment will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

This part of the IEC 61850 series provides an overview of the architecture for communication and interactions between systems for power utility automation such as protection devices, breakers, transformers, substation hosts etc.

This document is part of a set of specifications which details a layered communication architecture for power utility automation. This architecture has been chosen to provide abstract definitions of classes (representing hierarchical information models) and services such that the specifications are independent of specific protocol stacks, implementations, and operating systems.

The goal of the IEC 61850 series is to provide interoperability between the IEDs from different suppliers or, more precisely, between functions to be performed by systems for power utility automation but residing in equipment (physical devices) from different suppliers. Interoperable functions may be those functions that represent interfaces to the process (for example, circuit breakers) or substation automation functions such as protection functions. This part of the IEC 61850 series uses simple examples of functions to describe the concepts and methods applied in the IEC 61850 series.

This part of the IEC 61850 series describes the relationships between other parts of the IEC 61850 series. Finally this part defines how interoperability is reached.

**NOTE** Interchangeability is the ability to replace a device from the same vendor, or from different vendors, utilising the same communication interface and as a minimum, providing the same functionality, with no impact on the rest of the system. If differences in functionality are accepted, the exchange may also require some changes somewhere else in the system. Interchangeability implies a standardisation of functions and, in a strong sense, of devices which are outside the scope of this standard. Interchangeability is outside the scope, but it will be supported following this standard for interoperability.

This part of the IEC 61850 series is intended for all stakeholders of standardised communication and standardised systems in the utility industry. It provides an overview of and an introduction to IEC 61850-7-4, IEC 61850-7-3, IEC 61850-7-2, IEC 61850-6, and IEC 61850-8-1.

## COMMUNICATION NETWORKS AND SYSTEMS FOR POWER UTILITY AUTOMATION –

### Part 7-1: Basic communication structure – Principles and models

#### 1 Scope

This part of the IEC 61850 series introduces the modelling methods, communication principles, and information models that are used in the various parts of the IEC 61850-7-x series. The purpose of this part of the IEC 61850 series is to provide – from a conceptual point of view – assistance to understand the basic modelling concepts and description methods for:

- substation-specific information models for power utility automation systems,
- device functions used for power utility automation purposes, and
- communication systems to provide interoperability within power utility facilities.

Furthermore, this part of the IEC 61850 series provides explanations and provides detailed requirements relating to the relation between IEC 61850-7-4, IEC 61850-7-3, IEC 61850-7-2 and IEC 61850-5. This part explains how the abstract services and models of the IEC 61850-7-x series are mapped to concrete communication protocols as defined in IEC 61850-8-1.

The concepts and models provided in this part of the IEC 61850 series may also be applied to describe, among others, information models and functions for:

- hydroelectric power plants,
- substation to substation information exchange,
- information exchange for distributed automation,
- substation to control centre information exchange,
- information exchange for metering,
- condition monitoring and diagnosis, and
- information exchange with engineering systems for device configuration.

NOTE 1 This part of IEC 61850 uses examples and excerpts from other parts of the IEC 61850 series. These excerpts are used to explain concepts and methods. These examples and excerpts are informative in this part of IEC 61850.

NOTE 2 Examples in this part use names of classes (e.g. XCBR for a class of a logical node) defined in IEC 61850-7-4, IEC 61850-7-3, and service names defined in IEC 61850-7-2. The normative names are defined in IEC 61850-7-4, IEC 61850-7-3, and IEC 61850-7-2 only.

NOTE 3 This part of IEC 61850 does not provide a comprehensive tutorial. It is recommended that this part be read first – in conjunction with IEC 61850-7-4, IEC 61850-7-3, and IEC 61850-7-2. In addition, it is recommended that IEC 61850-1 and IEC 61850-5 also be read.

NOTE 4 This part of IEC 61850 does not discuss implementation issues.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

### **3 Terms and definitions**

For the purposes of this document, the terms and definitions given in IEC 61850-2 as well as the following apply.

#### **3.1 information**

knowledge concerning objects, such as facts, events, things, processes, or ideas, including concepts, that within a certain context has a particular meaning
