Rahvusvaheline jadaväljaande standardnumber (ISSN)

Information and documentation
International standard serial number (ISSN)
(ISO 3297:2020, identical)

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

<p>See Eesti standard EVS-ISO 3297:2021 „Informatsioon ja dokumentatsioon. Rahvusvaheline jadaväljaande standardnumber (ISSN)“ sisaldab rahvusvahelise standardi ISO 3297:2020 „Information and documentation. International standard serial number (ISSN)“ identset ingliskeelset teksti.</p>	<p>This Estonian Standard EVS-ISO 3297:2021 consists of the identical English text of the International Standard ISO 3297:2020 „Information and documentation. International standard serial number (ISSN)“.</p>
<p>Ettepaneku rahvusvahelise standardi ümbertrüki meetodil ülevõtuks on esitanud EVS/TK 22, standardi avaldamist on korraldanud Eesti Standardimis- ja Akrediteerimiskeskus.</p>	<p>Proposal to adopt the International Standard by reprint method has been presented by EVS/TK 22, the Estonian Standard has been published by the Estonian Centre for Standardisation and Accreditation.</p>
<p>Standard EVS-ISO 3297:2021 on jõustunud sellekohase teate avaldamisega EVS Teatajas.</p>	<p>Standard EVS-ISO 3297:2021 has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation and Accreditation.</p>
<p>Standard on kättesaadav Eesti Standardimis- ja Akrediteerimiskeskusest.</p>	<p>The standard is available from the Estonian Centre for Standardisation and Accreditation.</p>

Käsitlusala

Selles dokumendis iseloomustatakse jadaväljaannete ja teiste pidevväljaannete ühest identimist võimaldavat standardnumbrit (ISSN) ning propageeritakse selle kasutamist.

Iga rahvusvaheline jadaväljaande standardnumber (ISSN) on kindlal kandjal, trükisena või elektrooniliselt ilmunud jadaväljaande või muu pidevväljaande ainukordne identifikaator.

Standard võimaldab ka omavahel seotud pidevväljaandeid koondada eraldi eesliitega ISSN-i abil identifitseeritud kobarateks.

ISSN on rakendatav igasuguse ärimudeli või levitamiskiisiga (nt tasuta, vaba juurdepääsuga, tellimisel jne) jadaväljaannetele ja teistele pidevväljaannetele olenemata sellest, kas väljaanne ilmub praegu, on ilmumise lõpetanud või hakkab ilmuma lähemas tulevikus. Pidevväljaanded on, olenemata nende tootmiseks kasutatavast kandjast (trükis või elektrooniline),

- jadaväljaanded, nagu ajalehed, pildiajakirjad, teadusajakirjad, toimetised, koverentsikogumikud, määratlemata lõpuga raamatusarjad, aasta- või muu perioodi aruanded, ja
- lõpetamata lõimväljaanded, nagu irdlehtväljaanded, uuendatavad veebilehed, blogid, asutuste repositooriumid, kataloogid ja andmebaasid.

Monograafiatel, heli- ja videosalvestistel, noodiväljaannetel, audiovisuaalteostel, tekstilistel teostel ja muusikateostel on oma standardidentifikaatorid, mistõttu selles dokumendis neid lähemalt ei käsitleta. Juhul, kui need väljaanded on osa mõnest pidevväljaandest, saavad nad peale nende oma identifikaatori kanda ka ISSN-i.

MÄRKUS See dokument ei sisalda juhendeid ISSN-i praktiliseks kasutamiseks.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile standardiosakond@evs.ee.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 46, *Information and documentation*, Subcommittee SC 9, *Identification and description*.

This sixth edition cancels and replaces the fifth edition (ISO 3297:2017), which has been technically revised. The main changes compared to the previous edition are as follows:

- the Cluster ISSN concept has been broadened to identify groups of serial titles based on new types of relations;
- the list of resource types eligible for ISSN assignment has been expanded;
- the construction of the ISSN, its machine legibility, and ISSN metadata profile have been detailed;
- the interoperability of ISSN with other identification systems has been specified.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The need for a brief, unique and unambiguous identification code for serials and other continuing resources is internationally recognized. The exchange of information among libraries, abstracting services and other content users, system suppliers, distributors and other intermediaries, and publishers and other content producers justifies the requirement for a standard code. Communication between the different organizations transcends national boundaries and therefore requires an international code which is numeric, since no single alphabet is used by the majority of producers and users of serials. In response to these requirements, the International Standard Serial Number (ISSN) has been established as the identification code for serials. The ISSN is an opaque identifier where no meaning is to be inferred from the code itself.

The International Serials Data System (ISDS) was established as an inter-governmental organization within the framework of the UNESCO/UNISIST program to be the designated authority for controlling the assignment of ISSN. In 1993, the ISDS became the ISSN network which is the inter-governmental organization comprising ISO 3297 Registration Authority and ISO 3297 Registration Agencies to which some Registration services have been delegated, including ISSN assignment.

The first three editions of this document pertained only to serials. However, in 2002 a new category of resources, "continuing resources", was defined by the library community to encompass new kinds of resources, such as updating databases. The scope of the fourth edition was broadened to cover serials and other continuing resources. The fifth edition removed any reference to the business model from the standard. This sixth edition responds to sector requests by establishing the ability to group and identify related continuing resources into new types of clusters. Furthermore, this document specifies richer metadata elements to allow the communication of additional characteristics of a resource.

Information and documentation — International standard serial number (ISSN)

1 Scope

This document defines and promotes the use of a standard code (ISSN) for the unique identification of serials and other continuing resources.

Each International Standard Serial Number (ISSN) is a unique identifier for a serial or other continuing resource in a defined medium whether print or electronic.

This document also allows for grouping related continuing resources into clusters identified by a separately-prefixed ISSN as defined in this document.

ISSNs are applicable to serials and to other continuing resources, whatever the business model or modes of distribution (e.g. free, open access, on subscription, etc.) and irrespective of whether the serial is currently in publication, has ceased publication, or publication is planned for the foreseeable future. Continuing resources include whatever the medium of production (print or electronic):

- serials, such as newspapers, periodicals, journals, magazines, conference proceedings, monographic series with no predetermined conclusion, annual or other periodic reports, and
- ongoing integrating resources that are updated, such as loose-leaf publications, updating websites, blogs, institutional repositories, directories and databases.

Monographs, sound and video recordings, notated music publications, audiovisual works, textual works and musical works have their own standard identifiers and are not specifically mentioned in this document. Such items can carry an ISSN in addition to their appropriate identifiers when they are part of a continuing resource.

NOTE This document does not contain any operational guidance for its practical implementation.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

3.1 Metadata

3.1.1

abbreviated key title

specific title established by the ISSN network by replacing each significant word of a key title with the corresponding abbreviation from the List of Title Word Abbreviations managed by the ISO 3297 Registration Authority for ISO 4
