

Nuclear instrumentation - Data format for list mode digital data acquisition used in radiation detection and measurement

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

See Eesti standard EVS-EN IEC 63047:2021 sisaldb Euroopa standardi EN IEC 63047:2021 ingliskeelset teksti.	This Estonian standard EVS-EN IEC 63047:2021 consists of the English text of the European standard EN IEC 63047:2021.
Standard on jõustunud sellekohase teate avaldamisega EVS Teatajas.	This standard has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation and Accreditation.
Euroopa standardimisorganisatsioonid on teinud Euroopa standardi rahvuslikele liikmetele kättesaadavaks 12.02.2021.	Date of Availability of the European standard is 12.02.2021.
Standard on kättesaadav Eesti Standardimis- ja Akrediteerimiskeskusest.	The standard is available from the Estonian Centre for Standardisation and Accreditation.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile standardiosakond@evs.ee.

English Version

Nuclear instrumentation - Data format for list mode digital data
acquisition used in radiation detection and measurement
(IEC 63047:2018 + COR1:2020)

Instrumentation nucléaire - Format de données pour
l'acquisition de données numériques en mode liste utilisées
dans la détection et la mesure des rayonnements
(IEC 63047:2018 + COR1:2020)

Nukleare Instrumentierung - Datenformat für digitale
Datenerfassung im List-Mode für Strahlungsnachweis und -
messung
(IEC 63047:2018 + COR1:2020)

This European Standard was approved by CENELEC on 2021-01-25. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

This document (EN IEC 63047:2021) consists of the text of IEC 63047:2018¹ prepared by SC 45B "Radiation protection instrumentation" of IEC/TC 45 "Nuclear instrumentation".

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2022-01-25
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2024-01-25

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Endorsement notice

The text of the International Standard IEC 63047:2018¹ was approved by CENELEC as a European Standard without any modification.

¹ As impacted by IEC 63047:2018/COR1:2020.

Annex ZA

(normative)

Normative references to international publications with their corresponding European publications

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 Where an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this annex is available here: www.cenelec.eu.

<u>Publication</u>	<u>Year</u>	<u>Title</u>	<u>EN/HD</u>	<u>Year</u>

About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 21 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Catalogue IEC - webstore.iec.ch/catalogue

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient 21 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalelement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Recherche de publications IEC - webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

Glossaire IEC - std.iec.ch/glossary

67 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

Service Clients - webstore.iec.ch/csc

5.26.1	Definition	49
5.26.2	Use.....	50
5.26.3	The channelID element.....	50
5.26.4	The timeStamp element.....	50
5.26.5	The flags, flagDescriptionList and flagKindList elements	50
5.26.6	The description element.....	50
5.27	The EventGeo and EventGeoProperty types.....	50
5.27.1	Definition	50
5.27.2	Use.....	51
5.27.3	The channelID element.....	51
5.27.4	The timeStamp element	51
5.27.5	The position element.....	51
5.27.6	The orientation element.....	51
5.27.7	The speed element.....	51
5.27.8	The description element.....	51
5.28	The Position type	52
5.28.1	Definition	52
5.28.2	Use.....	52
5.29	The GeographicPoint type.....	52
5.29.1	Definition	52
5.29.2	Use.....	52
5.29.3	The latitude element.....	52
5.29.4	The longitude element.....	52
5.29.5	The elevation element.....	53
5.29.6	The elevationOffset element.....	53
5.29.7	The geopointAccuracy element.....	53

5.29.8	The elevationAccuracy element.....	53
5.29.9	The elevationOffsetAccuracy element	53
5.29.10	The datum element	53
5.30	The RelativeLocation type.....	53
5.30.1	Definition	53
5.30.2	Use.....	53
5.30.3	The relocaAzimuth element.....	54
5.30.4	The relocaInclination element.....	54
5.30.5	The distance element	54
5.30.6	The origin element	54
5.31	The Orientation type.....	55
5.31.1	Definition	55
5.31.2	Use.....	55
5.31.3	The azimuth element.....	55
5.31.4	The inclination element.....	55
5.31.5	The roll element.....	56
5.32	The EventMeasurementList and EventMeasurementListProperty types.....	56
5.32.1	Definition	56
5.32.2	Use.....	56
5.32.3	The channelID element.....	56
5.32.4	The timeStamp element.....	56
5.32.5	The measurementList element.....	56
5.32.6	The description element.....	57
5.32.7	The measurementPropertyList element	57
5.33	The Measurement and MeasurementProperty types	57
5.33.1	Definition	57
5.33.2	Use.....	57
5.33.3	The value element	57
5.33.4	The accuracy and defaultAccuracy elements.....	57
5.33.5	The description element.....	58
5.33.6	The quantity element	58
5.33.7	The accuracyKind element.....	58
5.33.8	The unit element	58
5.33.9	The valueType element	58
5.33.10	The accuracyType element	58
5.34	The EventHistogram1DList and EventHistogram1DListProperty types.....	58
5.34.1	Definition	58
5.34.2	Use.....	58
5.34.3	The channelID element.....	59
5.34.4	The timeStamp element	59
5.34.5	The histogram1DList element.....	59
5.34.6	The description element.....	59
5.34.7	The histogram1DPropertyList element	59
5.35	The Histogram1D and Histogram1DProperty types	59
5.35.1	Definition	59

5.35.2	Use.....	60

5.35.12	The rangeX and rangeY elements	61
5.36	The EventHistogram2DList and EventHistogram2DListProperty types.....	61
5.36.1	Definition	61
5.36.2	Use.....	61
5.37	The Histogram2D and Histogram2DProperty types	62
5.37.1	Definition	62
5.37.2	Use.....	62
5.38	The EventMessage and EventMessageProperty types	63
5.38.1	Definition	63
5.38.2	Use.....	63
5.38.3	The channelID element.....	63
5.38.4	The timeStamp element.....	63
5.38.5	The txtMessage element.....	63
5.38.6	The binMessage element.....	63
5.38.7	The description element.....	64
5.39	The Footer type	64
5.39.1	Definition	64
5.39.2	Use.....	64
5.39.3	The listModeDataID element.....	64
5.39.4	The listModeDataPart element.....	64
5.39.5	The lastEventListid element.....	64
5.39.6	The stop element	64
5.39.7	The totalDeadTimeList and totalLiveTimeList elements	64
6	How to use the list-mode data format defined in this document.....	65
6.1	General.....	65
6.2	Using timestamps	65
6.3	Dealing with timestamp counter rollover	67
6.4	Optimising the size of timestamp and rollover event encodings	68
6.5	Specifying high-precision event timing	68
6.5.1	General	68
6.5.2	Randomisation of *FINE_TIME values to resolve binning issues	68
6.6	Specifying events of different types in the same list-mode data.....	69
6.7	Representing data from one device and one channel	71
6.8	Encoding/decoding data for writing to/reading from a file or stream.....	73
6.8.1	General requirements	73
6.8.2	Writing encoded data to a file	73
6.8.3	Writing encoded data to a stream	79

6.8.4	Reading encoded data from a file	79
6.8.5	Reading encoded data from a stream	79
6.9	Representing data from more than one channel	80
6.10	Representing data from more than one device	82
6.11	Specifying dead time.....	83
6.11.1	Dead time, real time and live time.....	83
6.11.2	Using flags to identify pile-up.....	84
6.11.3	Associating dead time to individual pulses	86
6.11.4	Specifying dead time and live/real time not associated to individual pulses.....	87
6.11.5	Specifying different sources of dead time	88
6.12	Representing logic events.....	89
6.13	Representing digital signals	90
6.14	Representing one-dimensional histograms.....	92
6.15	Representing text or binary data in any format	93
6.15.1	General	93
6.15.2	Text messages	93
6.15.3	Binary or text data in any format	93
6.15.4	Sending IEC 62755 data.....	94
Annex A (informative)	Complete ASN.1 syntax for list-mode data	95
A.1	ASN.1 syntax	95

INTERNATIONAL ELECTROTECHNICAL COMMISSION**NUCLEAR INSTRUMENTATION – DATA FORMAT FOR LIST
MODE DIGITAL DATA ACQUISITION USED IN RADIATION
DETECTION AND MEASUREMENT****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 63047 has been prepared by IEC Technical Committee 45: Nuclear instrumentation.

The text of this International Standard is based on the following documents:

CDV	Report on voting
45/842/CDV	45/848/RVC

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

In this standard, the following print types are used:

- Names of data types, elements and definitions in ASN.1: in Courier New

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

In the context of this document, digital data acquisition devices are high-performance measuring instruments that sample signals from radiation detectors in order to store and process them in a digital manner. They offer advantages over conventional data acquisition systems: they are in general faster and cope better with high count rates, are more compact and less expensive per input channel. They allow easier integration of many radiation detectors in the same system, which results in benefits for nuclear physics. In addition, the real-time processing provided by digital data acquisition systems allows new applications in for example nuclear security and safeguards. They enable off-line processing and re-analysis of acquisition data which may improve the accuracy of radioactivity measurement, and enable computational analysis of individual detector or system response data.

The equipment to which this document applies is commonly known as "digitisers", and may offer signal processing with digital signal processors (DSP) or field-programmable gate arrays (FPGAs). To reduce the amount of data to be stored or transferred, these devices are programmed to extract only the properties of interest, such as the pulse height, pulse area, sub-areas, rise time or pulse shape, and the timestamp of the events associated with the interaction of radiation in a detector. Alternatively, they may also offer the partial or full recording of the digital signal for more advanced processing. This type of time-stamped data is often called "list-mode data" which may be stored for off-line processing and analysis by software.

Typically, digital data acquisition devices are controlled by a computer, which may be embedded in the device, and which runs proprietary or custom-made data acquisition software. Instrument drivers take care of the communication with the data acquisition device. This document specifies the format of the data presented by digital data acquisition devices, primarily used for accurate laboratory measurements, but also for new applications in nuclear safety, security and safeguards. The data may be stored on a local or remote computer, or may be streamed to a remote computer in a network.

This document relies on ASN.1 notation. ASN.1 is an internationally-standardised, vendor-, platform- and language-independent notation to specify data structures at a high level of abstraction. The ASN.1 notation standard is complemented with standardised encoding rules, which are independent of the notation, and again are platform- and language-independent. The encoding rules determine the precise bit-patterns in which values of these data structures are represented, when they are stored in a file or transferred to another computer over a network. Tools are available that facilitate the implementation of this document in software for data acquisition and analysis.

NUCLEAR INSTRUMENTATION – DATA FORMAT FOR LIST MODE DIGITAL DATA ACQUISITION USED IN RADIATION DETECTION AND MEASUREMENT

1 Scope

This international standard specifies the format of binary list-mode data at the output of digital data acquisition devices used for the detection and measurement of radiation. Such data acquisition devices may employ digital signal processors (DSPs) and field-programmable gate arrays (FPGAs) in combination with memory and a communication interface with a computer.

This document is applicable to those data acquisition devices which are able to record and present interaction data of radiation in detectors on an event-per-event basis, with data stored in an output file or streamed to a remote computer. Such list-mode data typically contains timestamp and energy information, but may also contain digital signals or properties like rise time or sub-areas of signals computed by the DSP or FPGA from the signal samples.

It is not the scope of this document to specify the communication protocol between data acquisition hardware and the instrument drivers. Instead, it specifies a standard format for the presentation of data acquired by one or more acquisition devices, to the user or user application.

This document only specifies the binary formatting of data. The formatted data may be sent or stored as specified by other protocols. Also, commands to control data acquisition devices are not included in this document.

This document does not put requirements on encryption or authentication of data. However, data is canonically encoded in the format of this document, which allows the application of data security algorithms.

This document does not replace IEC 62755. This document provides optional mechanisms to include IEC 62755 formatted data into list-mode data.

This document does not apply to data acquisition devices used as instrumentation and control systems in nuclear power plants, nor other safety-critical applications. It is also not intended for medical applications.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
