About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC online collection - oc.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 18 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC - webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC online collection - oc.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

| FOREWORD..... | 9 |
| 0 Introduction | 11 |
| 0.1 General..... | 11 |
| 0.2 Patent declaration..... | 12 |
| 1 Scope..... | 14 |
| 2 Normative references | 14 |
| 3 Terms, definitions, symbols, abbreviated terms and conventions | 16 |
| 3.1 Terms and definitions..... | 16 |
| 3.1.1 Common terms and definitions..... | 16 |
| 3.1.2 CPF 3: Additional terms and definitions | 22 |
| 3.2 Symbols and abbreviated terms | 27 |
| 3.2.1 Common symbols and abbreviated terms..... | 27 |
| 3.2.2 CPF 3: Additional symbols and abbreviated terms | 28 |
| 3.3 Conventions..... | 29 |
| 4 Overview of FSCP 3/1 (PROFIsafe™)..... | 29 |
| 5 General | 32 |
| 5.1 External documents providing specifications for the profile | 32 |
| 5.2 Safety functional requirements..... | 32 |
| 5.3 Safety measures..... | 32 |
| 5.4 Safety communication layer structure..... | 33 |
| 5.4.1 Principle of FSCP 3/1 safety communications | 33 |
| 5.4.2 CPF 3 communication structures | 35 |
| 5.5 Relationships with FAL (and DLL, PhL) | 37 |
| 5.5.1 Device model..... | 37 |
| 5.5.2 Application and communication relationships..... | 38 |
| 5.5.3 Data types | 38 |
| 6 Safety communication layer services | 39 |
| 6.1 F-Host driver services..... | 39 |
| 6.2 F-Device driver services | 43 |
| 6.3 Diagnosis..... | 45 |
| 6.3.1 Safety alarm generation..... | 45 |
| 6.3.2 F-(Sub)Module safety layer diagnosis | 45 |
| 7 Safety communication layer protocol | 46 |
| 7.1 Safety PDU format..... | 46 |
| 7.1.1 Safety PDU structure | 46 |
| 7.1.2 Safety IO data | 47 |
| 7.1.3 Status and Control Byte..... | 47 |
| 7.1.4 (Virtual) MonitoringNumber..... | 49 |
| 7.1.5 (Virtual) MNR mechanism (F_CRC_Seed=0) | 50 |
| 7.1.6 (Virtual) MNR mechanism (F_CRC_Seed=1) | 50 |
| 7.1.7 CRC2 Signature (F_CRC_Seed=0)..... | 52 |
| 7.1.8 CRC2 Signature (F_CRC_Seed=1)..... | 53 |
| 7.1.9 Non-safety IO data | 54 |
| 7.2 FSCP 3/1 behavior..... | 54 |
| 7.2.1 General | 54 |

| | | |
|--------|---|-----|
| 7.2.2 | F-Host driver state diagram | 55 |
| 7.2.3 | F-Device driver state diagram | 58 |
| 7.2.4 | F-Device driver restart | 62 |
| 7.2.5 | Sequence diagrams | 62 |
| 7.2.6 | Timing diagram for a MonitoringNumber reset | 69 |
| 7.2.7 | Monitoring of safety times | 69 |
| 7.3 | Reaction in the event of a malfunction | 72 |
| 7.3.1 | Corruption of safety data | 72 |
| 7.3.2 | Unintended repetition | 72 |
| 7.3.3 | Incorrect sequence | 73 |
| 7.3.4 | Loss | 73 |
| 7.3.5 | Unacceptable delay | 73 |
| 7.3.6 | Insertion | 73 |
| 7.3.7 | Masquerade | 73 |
| 7.3.8 | Addressing | 73 |
| 7.3.9 | Out-of-sequence | 74 |
| 7.3.10 | Loop-back | 74 |
| 7.3.11 | Network boundaries and router | 74 |
| 7.4 | F-Startup and parameter change at runtime | 75 |
| 7.4.1 | Standard startup procedure | 75 |
| 8 | Safety communication layer management | 75 |
| 8.1 | F-Parameter | 75 |
| 8.1.1 | Summary | 75 |
| 8.1.2 | F_Source/Destination_Address (Codename) | 76 |
| 8.1.3 | F_WD_Time (F-Watchdog time) | 77 |
| 8.1.4 | F_WD_Time_2 (secondary F-Watchdog time) | 77 |
| 8.1.5 | F_Prm_Flag1 (Parameters for the safety layer management) | 77 |
| 8.1.6 | F_Prm_Flag2 (Parameters for the safety layer management) | 80 |
| 8.1.7 | F_iPar_CRC (value of iPar_CRC across iParameters) | 81 |
| 8.1.8 | F_Par_CRC calculation (across F-Parameters) | 81 |
| 8.1.9 | Structure of the F-Parameter record data object | 82 |
| 8.2 | iParameter and iPar_CRC | 82 |
| 8.3 | Safety parameterization | 83 |
| 8.3.1 | Objectives | 83 |
| 8.3.2 | GSDL and GSDML safety extensions | 84 |
| 8.3.3 | Securing safety parameters and GSD data | 86 |
| 8.4 | Safety configuration | 90 |
| 8.4.1 | Order of IO data types | 90 |
| 8.4.2 | Securing the safety IO data description | 90 |
| 8.4.3 | Dataltem data type section examples | 91 |
| 8.5 | Data type information usage | 95 |
| 8.5.1 | F-Host Channel driver | 95 |
| 8.5.2 | Rules for standard F-Host Channel drivers | 96 |
| 8.5.3 | Recommendations for the use of F-Host Channel drivers | 97 |
| 8.6 | Safety parameter assignment mechanisms | 98 |
| 8.6.1 | F-Parameter assignment | 98 |
| 8.6.2 | General iParameter assignment | 98 |
| 8.6.3 | System integration requirements for iParameterization tools | 98 |
| 8.6.4 | iPar-Server | 100 |

| | | |
|---|---|-----|
| 9 | System requirements | 111 |
| 9.1 | Indicators and switches | 111 |
| 9.2 | Installation guidelines | 111 |
| 9.3 | Safety function response time | 111 |
| 9.3.1 | Model | 111 |
| 9.3.2 | Calculation and optimization | 113 |
| 9.3.3 | Adjustment of watchdog times for FSCP 3/1 | 115 |
| 9.3.4 | Engineering tool support | 116 |
| 9.3.5 | Retries (repetition of messages) | 116 |
| 9.4 | Duration of demands | 117 |
| 9.5 | Constraints for the calculation of system characteristics | 117 |
| 9.5.1 | Probabilistic considerations | 117 |
| 9.5.2 | Safety related assumptions | 119 |
| 9.5.3 | Non safety related constraints (availability) | 120 |
| 9.6 | Maintenance | 120 |
| 9.6.1 | F-(Sub)Module commissioning / replacement | 120 |
| 9.6.2 | Identification and maintenance functions | 120 |
| 9.7 | Safety manual | 121 |
| 9.8 | Wireless transmission channels | 122 |
| 9.8.1 | Black channel approach | 122 |
| 9.8.2 | Availability | 122 |
| 9.8.3 | Security measures | 122 |
| 9.8.4 | Stationary and mobile applications | 122 |
| 9.9 | Relationship between functional safety and security | 123 |
| 9.10 | Conformance classes | 123 |
| 10 | Assessment | 125 |
| 10.1 | Safety policy | 125 |
| 10.2 | Obligations | 125 |
| Annex A (informative) Additional information for functional safety communication profiles of CPF 3 | | 126 |
| A.1 | Hash function calculation | 126 |
| A.2 | Example values for MonitoringNumbers (MNR) | 130 |
| Annex B (informative) Information for assessment of the functional safety communication profiles of CPF 3 | | 131 |
| Annex C (normative) Optional features | | 132 |
| C.1 | Reaction on Device_Fault in F-Host | 132 |
| C.1.1 | Situation | 132 |
| C.1.2 | Documentation for the user | 132 |
| C.1.3 | Optional extensions of F-Host driver Transition Table | 132 |
| C.1.4 | Recommendation for the case without Extensions of F-Host driver Transitions | 135 |
| C.2 | Optional extensions of F-Host driver to "Disable F-(Sub)Module" | 135 |
| C.3 | Combination of "Disable F-(Sub)Module" and "reaction on Device_Fault" | 139 |
| C.4 | FSCP 3/1 and PROFIenergy | 141 |
| C.4.1 | Use of FSCP 3/1-Devices with PROFIenergy | 141 |
| C.4.2 | Sequence in case of PROFIenergy power off on | 141 |
| C.5 | Requirement multiple F-Hosts communicate with single F-(Sub)Module | 141 |
| C.6 | FSCP 3/1 PiR | 142 |
| Bibliography | | 143 |

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**INDUSTRIAL COMMUNICATION NETWORKS –
PROFILES –****Part 3-3: Functional safety fieldbuses –
Additional specifications for CPF 3**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61784-3-3 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation. It is an International Standard.

This fourth edition cancels and replaces the third edition published in 2016. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- editorial changes regarding timeliness, transformation of comments in the chart into instructions;
- use abbreviations of PROFINET;
- information added about checks and safety manual for PROFIsafe Address Type 1 and 2;
- information added about PFDavg, support of automatic test, add diagnosis messages;

- explanation and specification of optional statemachines for reaction on device fault;
- new optional variable "OAD_Nec_C" for optional feature "Reaction of Device_Fault in F_Host";
- specification of the optional F-Host feature for "Disable F-(Sub)Module";
- specify requirements for FSCP 3/1 and PROFIenergy;
- specify requirement for multiple F-Hosts communicating with a single F-(Sub)Module; Update of the Safety Manual;
- diverse error corrections, fixes of typos, and reference updates;
- updated bibliography.

The text of this International Standard is based on the following documents:

| FDIS | Report on voting |
|---------------|------------------|
| 65C/1083/FDIS | 65C/1087/RVD |

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts of the IEC 61784-3 series, published under the general title *Industrial communication networks – Profiles – Functional safety fieldbuses*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

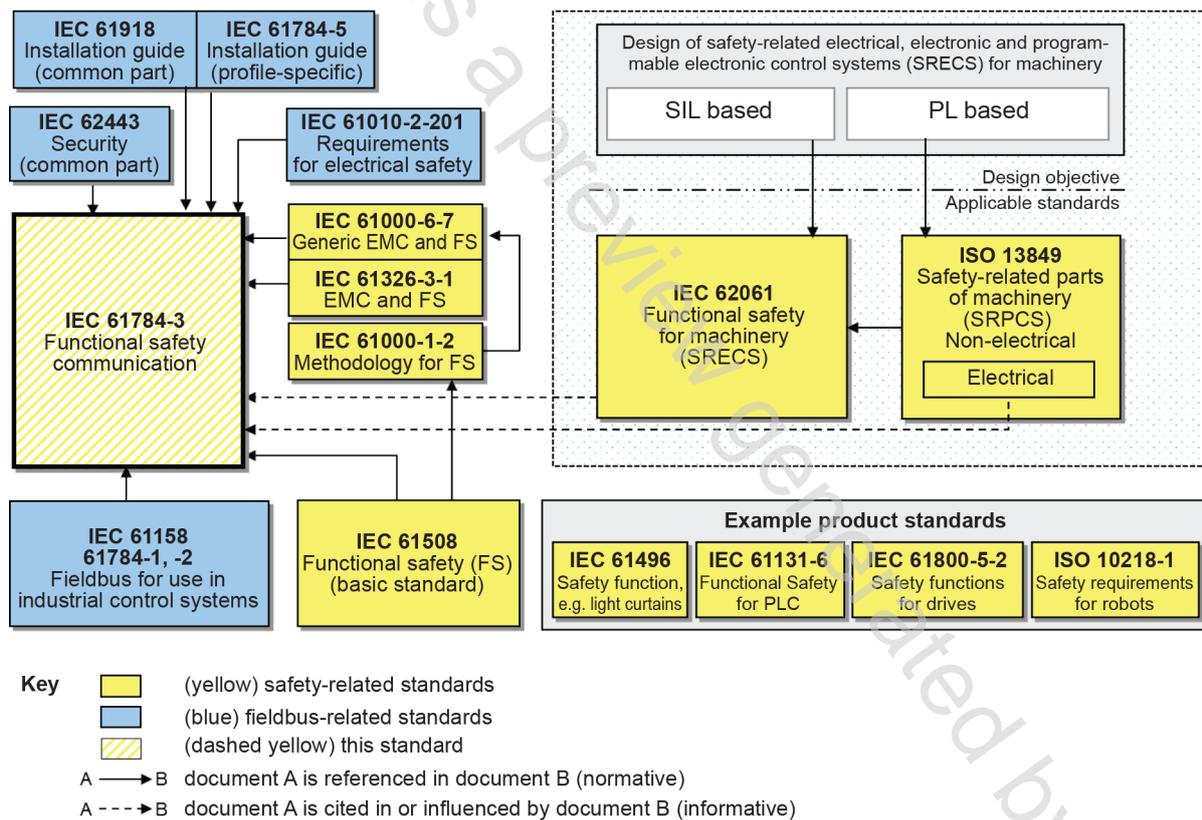

0 Introduction

0.1 General

The IEC 61158 (all parts) fieldbus standard together with its companion standards IEC 61784-1 and IEC 61784-2 defines a set of communication protocols that enable distributed control of automation applications. Fieldbus technology is now considered well accepted and well proven. Thus fieldbus enhancements continue to emerge, addressing applications for areas such as real time and safety-related applications.

IEC 61784-3 (all parts) explains the relevant principles for functional safety communications with reference to IEC 61508 (all parts) and specifies several safety communication layers (profiles and corresponding protocols) based on the communication profiles and protocol layers of IEC 61784-1, IEC 61784-2 and IEC 61158 (all parts). It does not cover electrical safety and intrinsic safety aspects. It also does not cover security aspects nor does it provide any requirements for security.

Figure 1 shows the relationships between IEC 61784-3 (all parts) and relevant safety and fieldbus standards in a machinery environment.

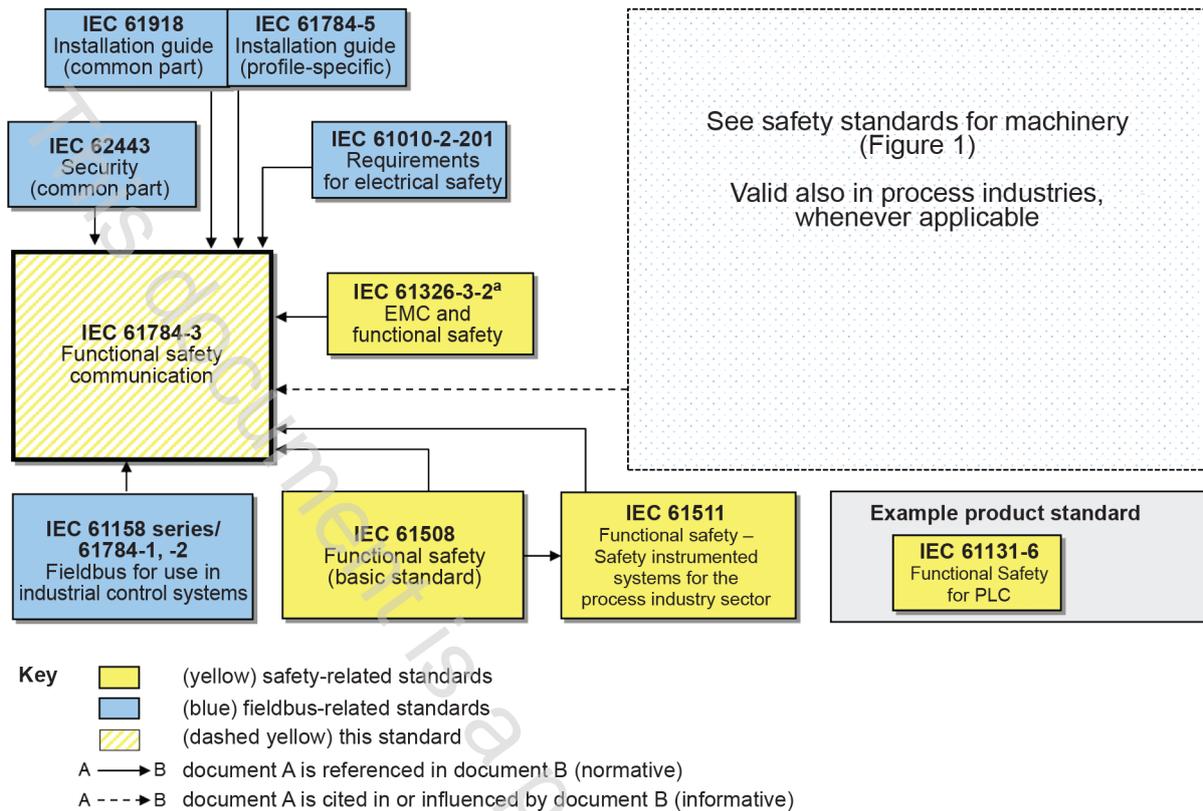

IEC

NOTE IEC 62061 specifies the relationship between PL (Category) and SIL.

Figure 1 – Relationships of IEC 61784-3 with other standards (machinery)

Figure 2 shows the relationships between IEC 61784-3 (all parts) and relevant safety and fieldbus standards in a process environment.

IEC

^a For specified electromagnetic environments; otherwise IEC 61326-3-1 or IEC 61000-6-7.

Figure 2 – Relationships of IEC 61784-3 with other standards (process)

Safety communication layers which are implemented as parts of safety-related systems according to IEC 61508 (all parts) provide the necessary confidence in the transportation of messages (information) between two or more participants on a fieldbus in a safety-related system, or sufficient confidence of safe behaviour in the event of fieldbus errors or failures.

Safety communication layers specified in IEC 61784-3 (all parts) do this in such a way that a fieldbus can be used for applications requiring functional safety up to the Safety Integrity Level (SIL) specified by its corresponding functional safety communication profile.

The resulting SIL claim of a system depends on the implementation of the selected functional safety communication profile (FSCP) within this system – implementation of a functional safety communication profile in a standard device is not sufficient to qualify it as a safety device.

IEC 61784-3 (all parts) describes:

- basic principles for implementing the requirements of IEC 61508 (all parts) for safety-related data communications, including possible transmission faults, remedial measures and considerations affecting data integrity;
- functional safety communication profiles for several communication profile families in IEC 61784-1 and IEC 61784-2, including safety layer extensions to the communication service and protocols sections of IEC 61158 (all parts).

0.2 Patent declaration

The International Electrotechnical Commission (IEC) draws attention to the fact that it is claimed that compliance with this document may involve the use of patents concerning the functional safety communication profiles for family 3. IEC takes no position concerning the evidence, validity, and scope of these patent rights.

The holder of these patent rights has assured IEC that s/he is willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of these patent rights is registered with IEC. Information may be obtained from the patent database available at <http://patents.iec.ch>.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those in the patent database. IEC shall not be held responsible for identifying any or all such patent rights.

INDUSTRIAL COMMUNICATION NETWORKS – PROFILES –

Part 3-3: Functional safety fieldbuses – Additional specifications for CPF 3

1 Scope

This part of IEC 61784-3 (all parts) specifies a safety communication layer (services and protocol) based on CPF 3 of IEC 61784-1, IEC 61784-2 (CP 3/1, CP 3/2, CP 3/4, CP 3/5 and CP 3/6) and IEC 61158 Types 3 and 10. It identifies the principles for functional safety communications defined in IEC 61784-3 that are relevant for this safety communication layer. This safety communication layer is intended for implementation in safety devices only.

NOTE 1 It does not cover electrical safety and intrinsic safety aspects. Electrical safety relates to hazards such as electrical shock. Intrinsic safety relates to hazards associated with potentially explosive atmospheres.

This document defines mechanisms for the transmission of safety-relevant messages among participants within a distributed network using fieldbus technology in accordance with the requirements of IEC 61508 (all parts)¹ for functional safety. These mechanisms may be used in various industrial applications such as process control, manufacturing automation and machinery.

This document provides guidelines for both developers and assessors of compliant devices and systems.

NOTE 2 The resulting SIL claim of a system depends on the implementation of the selected functional safety communication profile within this system – implementation of a functional safety communication profile according to this document in a standard device is not sufficient to qualify it as a safety device.

3 Terms, definitions, symbols, abbreviated terms and conventions

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 61784-3 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

NOTE Italics are used in the definitions to highlight terms which are themselves defined in 3.1.

3.1.1 Common terms and definitions

NOTE These common terms and definitions are inherited from IEC 61784-3:2021.

3.1.1.1

active network element

network element containing electrically and/or optically active components that allows extension of the network

Note 1 to entry: Examples of active network elements are repeaters and switches.

[SOURCE: IEC 61918:2018, 3.1.2]

3.1.1.2

availability

probability for an automated system that for a given period of time there are no unsatisfactory system conditions such as loss of production

3.1.1.3

bit error probability

P_e

probability for a given bit to be received with the incorrect value

3.1.1.4

black channel

defined communication system containing one or more *elements* without evidence of design or validation according to IEC 61508

Note 1 to entry: This definition expands the usual meaning of channel to include the system that contains the channel.

3.1.1.5

communication channel

logical connection between two end-points within a *communication system*

3.1.1.6

communication system

arrangement of hardware, software and propagation media to allow the transfer of *messages* (ISO/IEC 7498-1 application layer) from one application to another
