**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

**IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

**IEC online collection - [oc.iec.ch](http://oc.iec.ch)**

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 18 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

## Contents

1.	Overview .....	15
1.1	Scope .....	15
1.2	Purpose .....	15
1.3	Structure and terminology of this standard .....	15
2.	Normative references .....	18
3.	Design entities and configurations .....	19
3.1	General .....	19
3.2	Entity declarations .....	19
3.3	Architecture bodies .....	22
3.4	Configuration declarations .....	25
4.	Subprograms and packages .....	32
4.1	General .....	32
4.2	Subprogram declarations .....	32
4.3	Subprogram bodies .....	36
4.4	Subprogram instantiation declarations .....	39
4.5	Subprogram overloading .....	40
4.6	Resolution functions .....	42
4.7	Package declarations .....	43
4.8	Package bodies .....	45
4.9	Package instantiation declarations .....	46
4.10	Conformance rules .....	47
5.	Types and natures .....	48
5.1	General .....	48
5.2	Scalar types .....	49
5.3	Composite types .....	57
5.4	Access types .....	67
5.5	File types .....	69
5.6	Protected types .....	72
5.7	String representations .....	75
5.8	Natures .....	76
6.	Declarations .....	81
6.1	General .....	81
6.2	Type declarations .....	82
6.3	Subtype declarations .....	82
6.4	Objects .....	84
6.5	Interface declarations .....	95
6.6	Alias declarations .....	113
6.7	Attribute declarations .....	116
6.8	Component declarations .....	117
6.9	Group template declarations .....	117
6.10	Group declarations .....	117

6.11	Nature and subnature declarations .....	118
6.12	PSL clock declarations .....	119
7.	Specifications .....	120
7.1	General .....	120
7.2	Attribute specification .....	120
7.3	Configuration specification .....	123
7.4	Disconnection specification .....	129
7.5	Step limit specification .....	131
8.	Names .....	134
8.1	General .....	134
8.2	Simple names .....	135
8.3	Selected names .....	136
8.4	Indexed names .....	138
8.5	Slice names .....	139
8.6	Attribute names .....	139
8.7	External names .....	140
9.	Expressions .....	144
9.1	General .....	144
9.2	Operators .....	145
9.3	Operands .....	158
9.4	Static expressions .....	166
9.5	Universal expressions .....	170
9.6	Linear forms .....	170
10	Sequential statements .....	173
10.1	General .....	173
10.2	Wait statement .....	173
10.3	Assertion statement .....	175
10.4	Report statement .....	176
10.5	Signal assignment statement .....	177
10.6	Variable assignment statement .....	188
10.7	Procedure call statement .....	192
10.8	If statement .....	192
10.9	Case statement .....	193
10.10	Loop statement .....	195
10.11	Next statement .....	195
10.12	Exit statement .....	196
10.13	Return statement .....	196
10.14	Null statement .....	197
10.15	Break statement .....	197
11.	Architecture statements .....	198
11.1	General .....	198
11.2	Block statement .....	199
11.3	Process statement .....	200
11.4	Concurrent procedure call statements .....	202

11.5	Concurrent assertion statements.....	203
11.6	Concurrent signal assignment statements.....	204
11.7	Component instantiation statements.....	206
11.8	Generate statements.....	212
11.9	Concurrent break statement.....	214
11.10	Simple simultaneous statement.....	215
11.11	Simultaneous if statement.....	216
11.12	Simultaneous case statement.....	216
11.13	Simultaneous procedural statement.....	217
11.14	Simultaneous null statement.....	220
12.	Scope and visibility.....	221
12.1	Declarative region.....	221
12.2	Scope of declarations.....	221
12.3	Visibility.....	223
12.4	Use clauses.....	227
12.5	The context of overload resolution.....	228
13.	Design units and their analysis.....	230
13.1	Design units.....	230
13.2	Design libraries.....	230
13.3	Context declarations.....	232
13.4	Context clauses.....	232
13.5	Order of analysis.....	233
14.	Elaboration and execution.....	234
14.1	General.....	234
14.2	Elaboration of a design hierarchy.....	234
14.3	Elaboration of a block, package, or subprogram header.....	238
14.4	Elaboration of a declarative part.....	241
14.5	Elaboration of a statement part.....	246
14.6	Dynamic elaboration.....	250
14.7	Execution of a model.....	251
14.8	Time and the analog solver.....	266
14.9	Frequency and noise calculation.....	267
15.	Lexical elements.....	269
15.1	General.....	269
15.2	Character set.....	269
15.3	Lexical elements, separators, and delimiters.....	271
15.4	Identifiers.....	273
15.5	Abstract literals.....	274
15.6	Character literals.....	275
15.7	String literals.....	275
15.8	Bit string literals.....	276
15.9	Comments.....	278
15.10	Reserved words.....	279
15.11	Tool directives.....	281

16.	Predefined language environment .....	282
16.1	General .....	282
16.2	Predefined attributes .....	282
16.3	Package STANDARD.....	304
16.4	Package TEXTIO.....	319
16.5	Standard environment package .....	325
16.6	Standard mathematical packages .....	326
16.7	Standard multivalued logic package .....	327
16.8	Standard synthesis packages .....	327
16.9	Standard synthesis context declarations.....	333
16.10	Fixed-point package.....	334
16.11	Floating-point package.....	334
16.12	Standard packages for multiple energy domain support.....	335
17.	VHDL Procedural Interface overview .....	336
17.1	General .....	336
17.2	Organization of the interface.....	336
17.3	Capability sets.....	337
17.4	Handles.....	339
18.	VHPI access functions .....	341
18.1	General .....	341
18.2	Information access functions .....	341
18.3	Property access functions.....	343
18.4	Access by name function .....	344
19.	VHPI information model .....	345
19.1	General .....	345
19.2	Formal notation .....	345
19.3	Class inheritance hierarchy .....	346
19.4	Name properties .....	347
19.5	The stdUninstantiated package .....	360
19.6	The stdHierarchy package.....	363
19.7	The stdTypes package.....	370
19.8	The stdExpr package.....	372
19.9	The stdSpec package.....	375
19.10	The stdSubprograms package .....	377
19.11	The stdStmts package.....	379
19.12	The stdConnectivity package.....	385
19.13	The stdCallbacks package.....	390
19.14	The stdEngine package .....	391
19.15	The stdForeign package .....	391
19.16	The stdMeta package .....	391
19.17	The stdTool package .....	393
19.18	Application contexts .....	394
20.	VHPI tool execution .....	395
20.1	General .....	395
20.2	Registration phase.....	395

20.3	Analysis phase.....	401
20.4	Elaboration phase.....	401
20.5	Initialization phase.....	403
20.6	Simulation phase.....	403
20.7	Save phase.....	403
20.8	Restart phase.....	404
20.9	Reset phase.....	404
20.10	Termination phase.....	405
21.	VHPI callbacks.....	406
21.1	General.....	406
21.2	Callback functions.....	406
21.3	Callback reasons.....	408
22.	VHPI value access and update.....	420
22.1	General.....	420
22.2	Value structures and types.....	420
22.3	Reading object values.....	423
22.4	Formatting values.....	424
22.5	Updating object values.....	426
22.6	Scheduling transactions on drivers.....	430
23.	VHPI function reference.....	433
23.1	General.....	433
23.2	vhpi_assert.....	433
23.3	vhpi_check_error.....	434
23.4	vhpi_compare_handles.....	436
23.5	vhpi_control.....	437

23.32	vhpi_remove_cb.....	470
23.33	vhpi_scan.....	471
23.34	vhpi_schedule_transaction.....	472
23.35	vhpi_vprintf.....	475
24.	Standard tool directives.....	476
24.1	Protect tool directives.....	476
Annex A (informative)	Description of accompanying files.....	493
Annex B (informative)	VHPI header file.....	497
Annex C (informative)	Syntax summary.....	523
Annex D (informative)	Potentially nonportable constructs.....	551
Annex E (informative)	Changes from IEEE Std 1076.1-2007.....	552
Annex F (informative)	Features under consideration for removal.....	555
Annex G (informative)	Guide to use of standard packages.....	556
Annex H (informative)	Guide to use of protect directives.....	594
Annex I (informative)	Glossary.....	600
Annex J (informative)	Bibliography.....	629
Annex K (informative)	IEEE List of participants.....	631
Index	.....	632

## BEHAVIOURAL LANGUAGES –

### Part 6: VHDL Analog and Mixed-Signal Extensions

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC document(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation.

IEEE Standards documents are developed within IEEE Societies and Standards Coordinating Committees of the IEEE Standards Association (IEEE SA) Standards Board. IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of IEEE and serve without compensation. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards. Use of IEEE Standards documents is wholly voluntary. *IEEE documents are made available for use subject to important notices and legal disclaimers (see <http://standards.ieee.org/ipr/disclaimers.html> for more information).*

IEC collaborates closely with IEEE in accordance with conditions determined by agreement between the two organizations. This Dual Logo International Standard was jointly developed by the IEC and IEEE under the terms of that agreement.

- 2) The formal decisions of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees. The formal decisions of IEEE on technical matters, once consensus within IEEE Societies and Standards Coordinating Committees has been reached, is determined by a balanced ballot of materially interested parties who indicate interest in reviewing the proposed standard. Final approval of the IEEE standards document is given by the IEEE Standards Association (IEEE SA) Standards Board.
- 3) IEC/IEEE Publications have the form of recommendations for international use and are accepted by IEC National Committees/IEEE Societies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC/IEEE Publications is accurate, IEC or IEEE cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications (including IEC/IEEE Publications) transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC/IEEE Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and IEEE do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC and IEEE are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or IEEE or their directors, employees, servants or agents including individual experts and members of technical committees and IEC National Committees, or volunteers of IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE SA) Standards Board, for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC/IEEE Publication or any other IEC or IEEE Publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that implementation of this IEC/IEEE Publication may require use of material covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. IEC or IEEE shall not be held responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patent Claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

IEC 61691-6/IEEE Std 1076.1 was processed through IEC technical committee 91: Electronics assembly technology, under the IEC/IEEE Dual Logo Agreement. It is an International Standard.

The text of this International Standard is based on the following documents:

IEEE Std	FDIS	Report on voting
1076.1 (2017)	91/1715/FDIS	91/1727/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

The IEC Technical Committee and IEEE Technical Committee have decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

Approved 28 September 2017

**IEEE-SA Standards Board**

## Copyrights and Permissions

The editing and technical work done on the 2008 revision of IEEE Std 1076™, which forms the basis for this standard, was done in collaboration between the Accellera VHDL Technical Subcommittee and the IEEE VHDL Analysis and Screening Committee (VASG). Accellera has donated all of its work and copyrights back to the IEEE.

Material in 24.1 titled “Protect Tool Directives” is derived from the document titled “A Mechanism for VHDL Source Protection” © 2003, Cadence Design Systems Inc. Used, modified, and reprinted by permission of Cadence Design Systems Inc.

The packages FIXED\_GENERIC\_PKG, FIXED\_PKG, FLOAT\_GENERIC\_PKG, FLOAT\_PKG, and FIXED\_FLOAT\_TYPES were modified and used with permission from Eastman Kodak Company © 2006. Material in Annex G titled “Using the fixed-point package” (G.4) and “Using the floating-point package” (G.5) is derived from the documents titled “Fixed Point Package User’s Guide” and “Floating Point Package User’s Guide” by Eastman Kodak Company © 2006. Used, modified, and reprinted by permission of Eastman Kodak Company.

**Abstract:** The IEEE 1076.1 language, a hardware description language for the description and the simulation of analog, digital, and mixed-signal systems, is defined in this standard. The language, also informally known as VHDL-AMS, is built on IEEE Std 1076-2008 (VHDL) and extends it with additions and changes to provide capabilities of writing and simulating analog and mixed-signal models.

**Keywords:** analog design, computer, computer languages, hardware design, IEEE 1076™, IEEE 1076.1™, mixed-signal design, VHDL

## Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notices and Disclaimers Concerning IEEE Standards Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

### Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. IEEE Standards are documents developed through scientific, academic, and industry-based technical working groups. Volunteers in IEEE working groups are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE Standards do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers and users of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

## Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

## Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

## Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
Piscataway, NJ 08854 USA

## Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

## Copyrights

IEEE draft and approved standards are copyrighted by IEEE under U.S. and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

## Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

## Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every ten years. When a document is more than ten years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at <http://ieeexplore.ieee.org> or contact IEEE at the address listed previously. For more information about the IEEE SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

## Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

## Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

## Introduction

This introduction is not part of IEEE Std 1076.1-2017, IEEE Standard VHDL Analog and Mixed-Signal Extensions.

The IEEE 1076.1 language, informally known as VHDL-AMS, is a superset of IEEE Std 1076-2008 (VHDL) that provides capabilities for describing and simulating analog and mixed-signal systems with conservative and nonconservative semantics for the analog portion of the system.<sup>1</sup> The language supports modeling at many abstraction levels in electrical and nonelectrical energy domains for lumped systems that can be described by ordinary differential equations and algebraic equations. The language does not specify any particular technique to solve the equations, but it rather defines the results that must be achieved. The solution of the equations may include discontinuities. Interaction between the digital part of a model and its analog part is supported in a flexible and efficient manner. Finally, support for frequency domain small-signal and noise simulation is provided.

The extension of VHDL to support analog and mixed-signal systems began in 1989, as part of the second revision of IEEE Std 1076 targeted for a 1993 release. A large number of requirements to support analog and mixed-signal systems were submitted, and it soon became apparent that the complexity of the topic required the formation of a separate working group. The design of the IEEE 1076.1 language formally began in 1993, when the IEEE 1076.1 Working Group was formed under the auspices of the Design Automation Standards Committee of the IEEE Computer Society, under Project Authorization Request (PAR) 1076.1. Its charter was to extend the IEEE 1076 (VHDL) language to support the requirements for the description and simulation of analog and mixed-signal systems. The IEEE 1076.1 Working Group approved the draft standard in June 1997. The first release of the draft of IEEE Std 1076.1-1999 was approved by the IEEE Standards Board on 18 March 1999.

The 2017 revision includes changes made to IEEE Std 1076 since the publication of IEEE Std 1076.1-2007, as well as additions to the language. See the Annex E for a list of changes from the 2007 release.

The IEEE 1076.1 Working Group will continue to maintain the IEEE 1076.1 language.<sup>2</sup>

# IEEE Standard VHDL Analog and Mixed-Signal Extensions

## 1. Overview

### 1.1 Scope

This standard defines the IEEE 1076.1™ language, a hardware description language for the description and the simulation of analog, digital, and mixed-signal systems. Informally called VHDL-AMS (VHSIC Hardware Description Language for Analog and Mixed-Signal, where VHSIC stands for Very High Speed Integrated Circuits), the language is built on the IEEE 1076™ (VHDL) language and extends it to provide capabilities of writing and simulating analog and mixed-signal models.

### 1.2 Purpose

To support the design and verification of complex electronic systems containing a mixture of analog and digital devices, the IEEE 1076.1 language provides, as an extension of the IEEE VHDL 1076 language, a comprehensive set of capabilities for the description and simulation of mixed-signal and mixed-technology systems.

The revision adds selected new features to the language definition of IEEE Std 1076.1-2007, and it updates that standard to reflect changes in the VHDL specification, IEEE Std 1076-2008.<sup>1</sup>

### 1.3 Structure and terminology of this standard

#### 1.3.1 General

This document contains the complete reference of the IEEE 1076.1 VHDL language, including the unchanged portions of the base language and the extensions. Formally, IEEE Std 1076.1-2017 defines the extensions only, consisting of additions to, and changes of, the text of IEEE Std 1076-2008. The corresponding text is highlighted in light gray. Text that is not highlighted is identical in this document and in IEEE Std 1076-2008.

This standard is organized into clauses, each of which focuses on some particular area of the language. Within each clause, individual constructs or concepts are discussed in each subclause.

<sup>1</sup>Information on references can be found in Clause 2.

Each subclause describing a specific construct begins with an introductory paragraph. Next, the syntax of the construct is described using one or more grammatical *productions*.

A set of paragraphs describing the meaning and restrictions of the construct in narrative form then follow.

In this document, the word *shall* is used to indicate a mandatory requirement. The word *should* is used to indicate a recommendation. The word *may* is used to indicate a permissible action. The word *can* is used for statements of possibility and capability.

Finally, each clause may end with examples, notes, and references to other pertinent clauses.

### 1.3.2 Syntactic description

The form of a VHDL description is described by means of context-free syntax using a simple variant of the Backus-Naur form (BNF); in particular:

- a) Lowercase words in roman font, some containing embedded underlines, are used to denote syntactic categories, for example:

`formal_port_list`

Whenever the name of a syntactic category is used, apart from the syntax rules themselves, spaces take the place of underlines [thus, “formal port list” would appear in the narrative description when referring to the syntactic category in item a)].

- b) Boldface words are used to denote reserved words, for example:

**array**

Reserved words shall be used only in those places indicated by the syntax.

- c) A *production* consists of a *left-hand side*, the symbol “:=” (which is read as “can be replaced by”), and a *right-hand side*. The left-hand side of a production is always a syntactic category; the right-hand side is a replacement rule. The meaning of a production is a textual-replacement rule: any occurrence of the left-hand side may be replaced by an instance of the right-hand side.
- d) A vertical bar (|) separates alternative items on the right-hand side of a production unless it occurs immediately after an opening brace, in which case it stands for itself, as follows:

`letter_or_digit ::= letter | digit`  
`choices ::= choice { | choice }`

In the first instance, an occurrence of “letter\_or\_digit” can be replaced by either “letter” or “digit.” In the second case, “choices” can be replaced by a list of “choice,” separated by vertical bars [see item f) for the meaning of braces].

- e) Square brackets [ ] enclose optional items on the right-hand side of a production; thus, the following two productions are equivalent:

`return_statement ::= return [ expression ] ;`  
`return_statement ::= return ; | return expression ;`

Note, however, that the initial and terminal square brackets in the right-hand side of the production for signatures (see 4.5.3) are part of the syntax of signatures and do not indicate that the entire right-hand side is optional.

- f) Braces { } enclose a repeated item or items on the right-hand side of a production. The items may appear zero or more times; the repetitions occur from left to right as with an equivalent left-recursive rule. Thus, the following two productions are equivalent:

`term ::= factor { multiplying_operator factor }`  
`term ::= factor | term multiplying_operator factor`

- g) If the name of any syntactic category starts with an italicized part, it is equivalent to the category name without the italicized part. The italicized part is intended to convey some semantic

information. For example, *type\_name* and *subtype\_name* are both syntactically equivalent to *name* alone.

- h) The term *simple\_name* is used for any occurrence of an identifier that already denotes some declared entity.

### 1.3.3 Semantic description

The meaning and restrictions of a particular construct are described with a set of narrative rules immediately following the syntactic productions. In these rules, an italicized term indicates the definition of that term, and identifiers appearing entirely in uppercase letters refer to definitions in package STANDARD (see 16.3).

The following terms are used in these semantic descriptions with the following meanings:

**erroneous:** The condition described represents an ill-formed description; however, implementations are not required to detect and report this condition. Conditions are deemed erroneous only when it is impossible in general to detect the condition during the processing of the language.

**error:** The condition described represents an ill-formed description; implementations are required to detect the condition and report an error to the user of the tool.

**illegal:** A synonym for “error.”

**legal:** The condition described represents a well-formed description.

### 1.3.4 Front matter, examples, notes, references, and annexes

Prior to this subclause are several pieces of introductory material; following Clause 24 are some annexes and an index. The front matter, annexes (except Annex B), and index serve to orient and otherwise aid the user of this standard, but are not part of the definition of VHDL; Annex B, however, is normative.

Some clauses of this standard contain examples, notes, and cross-references to other clauses of the standard; these parts always appear at the end of a clause. Examples are meant to illustrate the possible forms of the construct described. Illegal examples are italicized. Notes are meant to emphasize consequences of the rules described in the clause or elsewhere. In order to distinguish notes from the other narrative portions of this standard, notes are set as enumerated paragraphs in a font smaller than the rest of the text. Cross-references are meant to guide the user to other relevant clauses of the standard. Examples, notes, and cross-references are not part of the definition of the language.

### 1.3.5 Incorporation of Property Specification Language

VHDL incorporates the simple subset of the Property Specification Language (PSL) as an embedded language for formal specification of the behavior of a VHDL description. PSL is defined by IEEE Std 1850™-2005. All PSL constructs that appear in a VHDL description shall conform to the VHDL flavor of PSL. Within this standard, reference is made to syntactic rules of PSL. Each such reference has the italicized prefix *PSL\_* and corresponds to the syntax rule in IEEE Std 1850-2005 with the same name but without the prefix.

## 2. Normative references

The following referenced documents are indispensable for the application of this document (i.e., they must be understood and used, so each referenced document is cited in text and its relationship to this document is explained). For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments or corrigenda) applies.

IEEE Std 754™-1985 (Reaff 1990), IEEE Standard for Binary Floating-Point Arithmetic.<sup>2,3</sup>

IEEE Std 854™-1987 (Reaff 1994), IEEE Standard for Radix-Independent Floating-Point Arithmetic.
