Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted (see <u>www.iso.org/directives</u> or <u>www.iec.ch/members experts/refdocs</u>).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see <u>www.iso.org/patents</u>) or the IEC list of patent declarations received (see <u>patents.iec.ch</u>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by the Storage Networking Industry Association (SNIA) (as Linear Tape File System (LTFS) Format Specification, Version 2.5) and drafted in accordance with its editorial rules. It was adopted, under the JTC 1 PAS procedure, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*.

This second edition cancels and replaces the first edition (ISO/IEC 20919:2016), which has been technically revised.

The main changes compared to the previous edition are as follows:

- Volume Advisory Locking a method of marking a volume as locked against future modification;
- Percent Encoding method of including previously reserved characters in names of files and directories;
- Incremental Indexes a method of recording a smaller index containing only changes since the last index;
- File hashes a method of recording fils hash information in the index in an interchangeable manner;
- Open For Write a method of noting files in the index which were still open at the time the index is written to tape.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at <u>www.iso.org/members.html</u> and <u>www.iec.ch/national-committees</u>.

2.4.0 rev 2	1/17/17	Add edits from	SNIA LTFS TWG	Minor editorial changes
		TWG F2F		
2.4.0 rev3	6/12/17	Add edits from	SNIA LTFS TWG	Added Advisory Locking
		TWG		changes
2.4.0 rev 4	6/13/17	Add Media Pool	SNIA LTFS TWG	Added additional extended
		changes per TWG		attributes for Media Pool
2.4.0 rev 5	6/19/17	Add edits per	SNIA LTFS TWG	Cleaned up a couple of
		TWG		typographical errors
2.4.0 rev 6	10/10/17	Add edits per	SNIA LTFS TWG	Incorporated public review
-		TWG	Q	editorial comments
2.4.0 rev 7	10/18/17	Add edits per	SNIA LTFS TWG	Minor editorial changes
		TWG		
2.4.0 rev 8	10/24/17	Annex G	SNIA LTFS TWG	Minor editorial change
2.4.0 rev 9	11/14/17	Annex G	SNIA LTFS TWG	Minor editorial change
2.5.0 rev 0	12/04/18	Sections 5 & 9,	SNIA LTFS TWG	Add incremental indexes;
		Annex B, etc.	· · · ·	changes for sync behavior
2.5.0 rev 1	02/11/19	Add Annex H;	SNIA LTFS TWG	New Annex describing
		edits per TWG		incremental indexes
2.5.0 rev 2	04/02/19	Section 9.2;	SNIA LTFS TWG	Corrected typos in example
		Annex H		XML, updated flowchart in
				Annex H to clarify intent
2.5.1 rev 0	08/18/20	Section 3;	SNIA LTFS TWG	Editorial changes to References
		Annex I		per feedback from ISO

Suggestion for changes or modifications to this document should be sent to the SNIA Linear Tape File System Technical Work Group at http://www.snia.org/feedback/.

Changes between v1.0 and v2.0.0

- Incremented version number to 2.0.0 and updated date to March 11, 2011.
- Improvements in specification text to remove ambiguity and clarify intention of the specification. These changes were made at several locations throughout the document.
- Improvements to clarify description of MAM parameters in Section 10 Medium Auxiliary Memory.
- Removed reference to a specific version of the Unicode standard in Section 7.5 Name pattern format. This removes any requirement to use specific versions of Unicode support code in an implementation.
- Improved description of Name pattern format to remove ambiguity in Section 7.5 Name pattern format.
- Added description of LTFS Format specification version numbering in Section 2.1 Versions.
- Updated XML Schema for Label and Index to match version number format in Annex A and Annex B.
- Added specification of minimum and recommended blocksize value for LTFS Volumes to Section 8.1.2 LTFS Label.
- Added definition of allowed version numbers to Section 8.1.2 LTFS Label and Section 9.2 Index.
- Added definition of fileoffset tag in Section 9.2 Index.
- Extended description in Section 6 Data Extents to support addition of fileoffset tag and associated functionality.
- Added definition of highestfileuid tag in Section 9.2 Index.
- Added definition of fileuid tag in Section 9.2 Index.
- Added definition of backuptime tag in Section 9.2 Index.
- Incremented version number in Application Client Specific Information (ACSI) structure shown in Section 10.3 Use of Volume Coherency Information for LTFS. This increment allows identification of LTFS Volumes written with a LTFS v1.0 compliant implementation. A widely used v1.0 implementation wrote ambiguous ACSI values due to an implementation bug.
- Added definition of extended attributes in the ltfs.* namespace in Annex C.
- Added description for handling unknown XML tags in Index to Section 9.2.13 Managing LTFS Indexes.

Changes between v2.0.0 and v2.0.1

- Incremented specification version number to 2.0.1.
- Updated specification date to August 17, 2011.
- Expanded historical record of changes between revisions of LTFS Format Specification.
- Improved description of constraints for two Indexes having the same generation number in Section 5.4.1 Generation Number to make it clear that differences in access time values is permitted between Indexes that are otherwise except for self pointer and index pointer values.
- Added note in Section 5.4.1 Generation Number to explicitly state that Index generation numbers may increase by integer values other than 1.
- Expanded description of the ltfs.sync extended attribute in Annex C . The expanded description explicitly states that this extended attribute triggers a sync of the in-memory data to the storage media. That is, the operation is analogous to a POSIX sync operation.

Changes between v2.0.1 and v2.1.0

- Incremented specification version number to 2.1.0.
- Updated specification date to October 18, 2012.
- Added definition of symlink tag in Section 9.2 Index.
- Added example of symlink tag use in Annex E.
- Added symlink tag to Annex B.
- Added description of "Itfs.vendor.X.Y" extended attribute namespace in Annex C .
- Added description of software metadata section in Annex C.
- Added description of drive metadata section in Annex C.
- Added "Itfs.labelVersion" extended attribute in Annex C.
- Added "Itfs.indexVersion" extended attribute in Annex C
- Added "Itfs.mediaEncrypted" extended attribute in Annex C .
- Improved description of "Itfs.mediaStorageAlert" extended attribute in Annex C.

Changes between v2.1.0 and v2.2.0

- Incremented specification version number to 2.2.0.
- Updated specification date to July 16, 2013.
- Changed "2010" to "2013" in XML examples.
- Editorial Cleanup.
- Changed "extentinfo" definition in Section 9.2 Index.
- Changed "symlink" definition in Section 9.2 Index.
- Added additional paragraph to "symlink" definition in Section 9.2 Index.
- Added general comments at start of Section 10 Medium Auxiliary Memory.
- Added Section 10.4 Use of Host-type Attributes for LTFS.
- Removed Section 9 Certification from document.
- Added "Itfs.mamBarcode" extended attribute in Volume Metadata.
- Added "Itfs.mamApplicationVendor" extended attribute in Volume Metadata.
- Added "Itfs.mamApplicationVersion" extended attribute in Volume Metadata.
- Added "Itfs.mamApplicationFormatVersion" extended attribute in Volume Metadata.
- Added new Annex F Interoperability Recommendation and added File Spanning and File Permissions subsections

Changes between v2.2.0 and 2.3.0 rev 1

- Add section F.3 Storing File Hash Values in LTFS
- Add Section 10.5 Volume Advisory Locking to Section 10 Medium Auxiliary Memory
- Added Volume UUID to Section 10.4 and Section 10.4.8
- Added LTFS Name Encoding to Sections 3.1, 7.4, 9.2.1 and 9.2.2
- Added SHA512 to Section F.3 Storing Hash Values in LTFS
- ISO document formatting changes

Add Media Pool Extended Attributes and MAM

Changes between v2.3.0 rev 1 and v2.4.0

- Incremented specification version number to 2.4.0.
- Added new text to Section 10.5 Volume Advisory Locking
- Added new text to Annex C.4 VolumeMetadata, ltfs.volumeLockState
- Added new text for "openforwrite" to Section 9.2.9
- Added new entry to the file element list in Annex B
- Added new descriptive text to Annex E
- Added new example file "partialfile.bin" to Annex E
- Updated the compliance statement to "version 2.4.0" in Section 7.4 Name Format
- Added new percentencoding text to Section 7.4 Name Format
- Removed percentencoding definition from Section 9.2.7
- Removed percentencoding definition from Section 9.2.9
- Added new text to symlink definition in Section 9.2.9
- Removed percentencoding paragraph(s) from Section 9.2.10
- Removed the percentencoded entry from the directory, file and extended attributes sections in Annex B
- Changed the name definition in the directory section of Annex B
- Changed the name definition in the file section of Annex B
- Changed the symlink definition in the file section of Annex B
- Changed the key definition in the extended attributes section of Annex B
- Added new NameType definition to Annex B
- Changed the entry for fileuid "10" in Annex E

Changes between v2.4.0 and v2.4.0 rev 1

- Incremented specification version number to 2.4.0 rev 1.
- Changed version from 2.3.0 to 2.4.0 in Section 2.1 Versions
- Changed version from 2.3.0 to 2.4.0 in Annex E
- Cleaned up some hyperlinks and minor editorial changes

Changes between v2.4.0 rev 1 and v2.4.0 rev 2

- Changed version from 2.3.0 to 2.4.0 throughout document except for Section 9.2.19
- Changed updatetime in Annex E to reflect correct date/time value for example shown
- Changed highestfileuid in Annex E to reflect correct value for example shown
- Changed lockType to locktype throughout document
- Changed NameType to nametype throughout document

Changes between v2.4.0 rev 2 and v2.4.0 rev 3

 Updated the definition of the volumeLockState virtual extended attribute in Section 10.5 and Annex C.4

Changes between v2.4.0 rev 3 and v2.4.0 rev 4

• Updated the definition of the Media Pool MAM attribute in Section 10.4 and Annex F.4.1.1

Changes between v2.4.0 rev 4 and v2.4.0 rev 5

• Fixed a couple of typographical errors

Changes between v2.4.0 rev 5 and v2.4.0 rev 6

- Corrections to Annex B XML Schema
- Added Annex G character representations
- Clarified in Section 7.4 that percent encoding does not apply to Table 13, and added reference to Annex G
- Added two further IBM contributors to the Acknowledgements

Changes between v2.4.0 rev 6 and v2.4.0 rev 7

- Changed title and reference of table G.1 in Annex G applies to 2.3 and later
- Added clarifying note for symlinks in Annex G

Changes between v2.4.0 rev 7 and v2.4.0 rev 8

- Changed column heading in tables G.1 and G.2 to "symlink target name"
- Improved wording of Note 3 in Annex G

Changes between v2.4.0 rev 8 and v2.4.0 rev 9

- Changed column heading in tables G.1 and G.2 to "File name, directory name, filename pattern"
- Added corresponding Note 4 in Annex G

Changes between v2.4.0 rev 9 and v2.5.0

- Incremented specification version number to 2.5.0.
- Added new text to describe Full and Incremental Indexes, in particular in 5.4 Index Layout and 9 Index Format.
- Added new virtual extended attributes related to Incremental Indexes in C.4.
- Specify required behavior in response to writing ltfs.commitMessage and ltfs.sync VEAs in Annex C.

Changes between v2.5.0 rev 0 and v2.5.0 rev 1

- Added new informative Annex H describing background information on Incremental Indexes
- Editorial changes to clarify required vs optional elements in Incremental Indexes in 9 Index Format.
- Clarified that the required behavior for ltfs.commitMessage and ltfs.sync applies only to implementations supporting those VEAs.

Changes between v2.5.0 rev 1 and v2.5.0 rev 2

- Corrected typos in Incremental Indexes example XML in 9.2.2 and 9.2.12
- Corrected typos in Annex H and amended flowchart H.1 to clarify the intent

Changes between v2.5.0 rev 2 and v2.5.1 rev 0

- <text> Moved informative references from Section 3 to new Annex I Bibliography
- Amended all references to SPC-3 / SPC-4 to SPC-5

1 Introduction

This document defines a Linear Tape File System (LTFS) Format separate from any implementation on data storage media. Using this format, data is stored in LTFS Volumes. An LTFS Volume holds data files and corresponding metadata to completely describe the directory and file structures stored on the volume.

The LTFS Format has these features:

- An LTFS Volume can be mounted and volume content accessed with full use of the data • without the need to access other information sources.
- Data can be passed between sites and applications using only the information written to • an LTFS Volume.
- Files can be written to, and read from, an LTFS Volume using standard POSIX file operations.

The LTFS Format is particularly suited to these usages:

- Data export and import.
- Data interchange and exchange. •
- Direct file and partial file recall from sequential access media.
- ified, s Archival storage of files using a simplified, self-contained or "self-describing" format on sequential access media.

2 **Scope**

This document defines the LTFS Format requirements for interchanged media that claims LTFS compliance. Those requirements are specified as the size and sequence of data blocks and file marks on the media, the content and form of special data constructs (the LTFS Label and LTFS Index), and the content of the partition labels and use of MAM parameters.

The data content (not the physical media) of the LTFS format shall be interchangeable among all data storage systems claiming conformance to this format. Physical media interchange is dependent on compatibility of physical media and the media access devices in use.

NOTE: This document does not contain instructions or tape command sequences to build the LTFS structure.

2.1 Versions

This document describes version 2.5.0 of the Linear Tape File System (LTFS) Format Specification.

The version number for the LTFS Format Specification consists of three integer elements separated by period characters of the form *M.N.R*, where *M*, *N* and *R* are positive integers or zero. Differences in the version number between different revisions of this specification indicate the nature of the changes made between the two revisions. Each of the integers in the format specification are incremented according to Table 1.

Element	Description U
М	Incremented when a major update has been made to the LTFS Format Specification. Major updates are defined as any change to the on-media format or specification semantics that are expected to break compatibility with older versions of the specification.
N	Incremented when a minor update has been made to the LTFS Format Specification. Minor updates are defined as any change to the on-media format or specification semantics that is not expected to break compatibility with older versions of the specification that have the same value for <i>M</i> in the version number.
R	Incremented when textual revisions are made to the LTFS Format Specification. Textual revisions are defined as revisions that improve the clarity of the specification document <i>without</i> changing the intent of the document. By definition, minor changes do not alter the on-media format or specification semantics.

Table	1 —	Version	elements
-------	-----	---------	----------

NOTE 1: When any element of the specification version number is incremented, all sub-ordinate elements to the right are reset to zero. For example, if the version is 1.0.12 and N is incremented to 1, then R is set to zero resulting in version 1.1.0.

NOTE 2: The first public version of this document used version number 1.0. This value should be interpreted as equivalent to 1.0.0 in the version numbering defined in this document.

The result of comparison between two LTFS version numbers $M_A.N_A.R_A$ and $M_B.N_B.R_B$ is defined in Table 2.

Conditional	Description
$M_A < M_B$	$M_A.N_A.R_A$ is an earlier version than $M_B.N_B.R_B$.
M _A = M _B and M _A < N _B	$M_A.N_A.R_A$ is an earlier version than $M_B.N_B.R_B$.
M_A = M_B and N_A = N_B and $R_A < R_B$	$M_A.N_A.R_A$ is an earlier version than $M_B.N_B.R_B$. However, as defined above, changes that result only in a different <i>R</i> value are descriptive changes in the specification rather than on media changes.

Table 2 — Version comparisons

2.2 Conformance

Recorded media claiming conformance to this format shall be in a consistent state when interchanged or stored. See Section 4.1.4.

Any implementation conforming to this specification should be able to correctly read Label and Index structures from all prior versions of this specification and write Label and Index structures conforming to the descriptions in this document. The current Label and Index structures are defined in Section 8 <text> Label Format and in Section 9 Index Format.

NOTE: Where practical, any implementation supporting a given version value for M should endeavor to support LTFS volumes with version numbers containing higher values for N and R than those defined at the time of implementation.
