Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 127, *Earth-moving machinery*, Subcommittee SC 3, *Machine characteristics, electrical and electronic systems, operation and maintenance*.

This third edition cancels and replaces the second edition (ISO 10261:2002), of which it constitutes a minor revision. It also incorporates the Amendment ISO 10261:2002/Amd 1:2015. The changes compared to the previous edition are as follows:

- merge the content of ISO 10261:2002/Amd 1:2015, Table 2 into [Table 1](#);
- update the text in accordance with the latest editions of ISO/IEC Directives, Part 1 and Part 2; especially update [Annex A](#) wordings as to Registration Authority for “WMC” in accordance with ISO/IEC Directives, Part 1:2020, Annex SN.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Earth-moving machinery — Product identification numbering system

1 Scope

This document specifies the requirements, content, structure and identification location of a product identification numbering system for earth-moving machinery as defined in ISO 6165.

NOTE ISO 10261 PIN can be used on other types of off-road work machines.

It is not applicable to the identification of components or attachments.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1

product identification number

PIN

unique set of 17 alphanumeric characters assigned to a complete machine by the *manufacturer* (3.6) for identification purposes

Note 1 to entry: The PIN consists of four *fields* (3.5) as defined in 3.1.1 to 3.1.4.

3.1.1

world manufacturer code

WMC

first *field* (3.5) of the *PIN* (3.1), alphanumeric code designating the *manufacturer* (3.6) of the machine

3.1.2

machine descriptor section

MDS

second *field* (3.5) of the *PIN* (3.1), comprising information describing the machine

3.1.3

machine indicator section

MIS

last *field* (3.5) of the *PIN* (3.1), distinguishing, in conjunction with the WMC and MDS, one machine from another by designation
