Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see <https://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by ITU-T (as ITU-T REC. T.803) and drafted in accordance with its editorial rules, in collaboration with Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

This second edition cancels and replaces the first edition (ISO/IEC 15444-2:2004), which has been technically revised. It also incorporates the Amendments ISO/IEC 15444-2:2004/Amd 2:2006, ISO/IEC 15444-2:2004/Amd 3:2015 and ISO/IEC 15444-2:2004/Amd 4:2015 and the Technical Corrigenda ISO/IEC 15444-2:2004/Cor 3:2005 and ISO/IEC 15444-2:2004/Cor 4:2007.

The main changes are as follows:

- Annex N ("JPX file format extended metadata definition and syntax") is deprecated;
- the Registration Authority specified in M.7, which was never created or used, is cancelled;
- signalling for HTJ2K codestreams, as specified in Rec. ITU-T T.814 | ISO/IEC 15444-15, is added;
- the RLT marker segment is added;
- references have been revised to their currently in-force editions;
- signalling for codestreams that conform to ISO/IEC 21122-1 is added;
- parameterized colourspace is added to the Colour Specification box;

- outstanding amendments and corrigenda are consolidated; and
- the definition of the CAP marker segment was moved to Rec. ITU-T T.800 (2019) | ISO/IEC 15444-1:2019.

A list of all parts in the ISO/IEC 15444 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

1 Scope	1
2 Normative references.....	1
2.1 Identical Recommendations International Standards.....	1
2.2 Paired Recommendations International Standards	1
2.3 Additional references.....	2
3 Definitions.....	2
4 Abbreviations	4
5 Conventions	4
6 General description.....	4
6.1 Extensions specified by this Recommendation International Standard	5
6.2 Relation between extensions	6
Annex A – Compressed data syntax, extension.....	8
A.1 Extended capabilities	8
A.2 Extensions to Rec. ITU-T T.800 ISO/IEC 15444-1 marker segment parameters.....	8
A.3 Extended marker segments	14
Annex B – Variable DC offset, extension	34
B.1 Variable DC offset flow.....	34
B.2 Inverse DC offset.....	34
B.3 Forward DC offset (informative)	34
Annex C – Variable scalar quantization, extension	36
C.1 Variable scalar quantization.....	36
C.2 Variable scalar dequantization for irreversible filters	36
C.3 Variable scalar quantization for irreversible filters (informative).....	36
Annex D – Trellis coded quantization extensions.....	38
D.1 Introduction to TCQ	38
D.2 Sequence definition	39
D.3 Forward TCQ quantization (informative).....	40
D.4 Inverse quantization (normative).....	41
D.5 Lagrangian rate allocation (informative)	44
Annex E – Visual masking, extensions	49
E.1 Introduction to visual masking (informative)	49
E.2 Point-wise extended non-linearity (informative)	49
E.3 Decoding with visual masking	51
E.4 Encoding with visual masking (informative).....	52
E.5 Setting parameters (informative).....	52
E.6 Compatibility with other technologies (informative)	52
Annex F – Arbitrary decomposition of tile-components, extensions.....	53
F.1 Wavelet sub-bands.....	53
F.2 Equation, text and decomposition updates.....	54
F.3 Inverse discrete wavelet transformation for general decompositions	63
F.4 Forward discrete wavelet transformation for general decompositions (informative)	70
Annex G – Whole-sample symmetric transformation of images, extensions.....	77
G.1 Wavelet transformation parameters, definitions and normalizations	77
G.2 Whole-sample symmetric (WS) wavelet transformations reconstruction	77
G.3 Whole-sample symmetric (WS) wavelet transformation decomposition (informative)	80
G.4 Examples of WS wavelet transformations (informative)	82
Annex H – Transformation of images using arbitrary wavelet transformations	85
H.1 Wavelet transformation parameters and normalizations	85
H.2 Arbitrary (ARB) wavelet transformation reconstruction procedures	86
H.3 Arbitrary (ARB) wavelet transformation decomposition procedures (informative)	91
H.4 Examples of ARB wavelet transformations (informative)	94

Annex I – Single sample overlap discrete wavelet transform, extensions	98
I.1 Introduction to single sample overlapping.....	98
I.2 The code-block anchor points (CBAP) extension.....	98
I.3 The SSO extension	101
I.4 The TSSO extension	109
I.5 Combining the SSO and TSSO extensions (informative)	111
Annex J – Multiple component transformations, extension	112
J.1 Introduction to multiple component transformation concepts	112
J.2 Overview of inverse processing	112
J.3 Transformations.....	118
Annex K – Non-linear transformation.....	128
K.1 Signalling the use of the non-linear transformations.....	128
K.2 Non-linear transformation specifications.....	129
Annex L – Region of interest coding and extraction, extensions	133
L.1 Decoding of ROI	133
L.2 Description of the Scaling based method.....	133
L.3 Region of interest mask generation	134
L.4 Remarks on region of interest coding.....	138
Annex M – JPX extended file format syntax.....	139
M.1 File format scope	139
M.2 Introduction to JPX.....	139
M.3 Greyscale/Colour/Palette/multi-component specification architecture	142
M.4 Fragmenting the codestream between one or more files	143
M.5 Combining multiple codestreams	145
M.6 Using reader requirements masks to determine how a file can be used	149
M.7 Extensions to the JPX file format.....	156
M.8 Differences from the JP2 binary definition.....	157
M.9 Conformance	157
M.10 Key to graphical descriptions (informative)	161
M.11 Defined boxes.....	161
M.12 Dealing with unknown boxes.....	210
M.13 Using the JPX file format in conjunction with other multi-media standards (informative)	211
M.14 Decomposing an XML document into multiple boxes.....	211
Annex N – JPX file format extended metadata definition and syntax	213
N.1 Introduction to extended metadata	213
N.2 Additional references for extended metadata.....	213
N.3 Scope of metadata definitions	213
N.4 Metadata syntax.....	214
N.5 Defined boxes.....	215
N.6 Metadata definitions	217
N.7 Fundamental type and element definitions	246
N.8 JPX extended metadata document type definition	264
N.9 JPX extended metadata XML Schema	275
Annex O – Examples and guidelines, extensions	293
O.1 Arbitrary decomposition examples.....	293
O.2 Odd Tile Low Pass First (OTLPF) convention	314
O.3 Multiple component collection example.....	315
O.4 Background to enhancement of quantization.....	325
O.5 Wrapping JPEG XR (Rec. ITU-T.T.832 ISO/IEC 29199-2) Codestreams by the JPX file format	326
O.6 Representing floating point numbers within JPEG 2000.....	328
O.7 Working with ROI Description boxes	329

	<i>Page</i>
Annex P – Block coder extensions.....	331
P.1 Selective arithmetic coding bypass (lazy mode)	331
P.2 Enhancement of selective arithmetic coding bypass (fast mode)	331
Bibliography	333

List of Tables

Table A.1 – Syntax support for extensions.....	8
Table A.2 – Capability Rsiz parameter, extended.....	9
Table A.3 – Start of tile-part parameter values, extended	9
Table A.4 – Number of tile-parts, TNsot, parameter value, extended	9
Table A.5 – Coding style parameter values for the Scod parameter.....	10
Table A.6 – Coding style parameter values of the SGcod parameter	10
Table A.7 – Coding style parameter values of the SPcod and SPcoc parameters, extended.....	11
Table A.8 – Multiple component transformation for the SGcod parameters	11
Table A.9 – Decomposition for the SPcod and SPcoc parameters, extended	11
Table A.10 – Transformation for the SPcod and SPcoc parameters, extended	11
Table A.11 – SSO parameters, extended	12
Table A.11bis – SXcod parameter	12
Table A.12 – Quantization default values for the Sqcd, Sqcc, Sqpd, and Sqpc parameters, extended.....	13
Table A.13 – Quantization values (irreversible transformation only), extended.....	13
Table A.14 – SPqcd, SPqcc, SPqpd, and SPqpc parameters (irreversible transformation only), extended	13
Table A.15 – SPqcd, SPqcc, SPqpd, and SPqpc parameters (irreversible transformation only), extended	14
Table A.16 – Region-of-interest parameter values for the Srgn parameter.....	14
Table A.17 – Component index parameter value for the Crgn parameter	14
Table A.18 – Region-of-interest values from SPrgn parameter (Srgn = 1 or Srgn = 2)	14
Table A.19 – List of markers and marker segments	15
Table A.20 – Variable DC offset parameter values	16
Table A.21 – Variable DC offset parameter values for the Sdco parameter	16
Table A.22 – Visual masking parameter values	17
Table A.23 – Component parameter value for the Cvms parameter.....	17
Table A.24 – Visual masking for the Svms parameters	17
Table A.25 – Downsampling factor styles parameter values	18
Table A.26 – Arbitrary decomposition styles parameter values.....	19
Table A.27 – Arbitrary transformation parameter values.....	20
Table A.28 – Arbitrary transformation values for the Satk parameter.....	21
Table A.29 –Component bit depth definition parameter values	22
Table A.30 – Component bit depth definition values for the Ncbd parameter.....	22
Table A.31 – Component bit depth definition values for the BDcbd ⁱ parameter	22
Table A.32 – Multiple component transformation definition parameter values.....	23
Table A.33 – Multiple component transformation definition values for the Imct parameter.....	23
Table A.34 – Multiple component collection parameter values	25
Table A.35 – Multiple component collection values for the Xmcc ⁱ parameter.....	25
Table A.36 – Multiple component collection values for the Nmcc ⁱ parameter.....	25
Table A.37 – Multiple component collection values for the Mmcc ⁱ parameter	25

Table A.38 – Multiple component collection values for the Tmcc ⁱ parameter (array-based).....	26
Table A.39 – Multiple component collection values for the Tmcc ⁱ parameter (wavelet-based).....	26
Table A.40 – Multiple component intermediate collection parameter values.....	27
Table A.41 – Non-linearity transformation parameter values	28
Table A.42 – Non-linearity transformation parameter values for the Cnlt parameter	28
Table A.43 – Decoded image component bit depth parameter values for the BDnlt parameter	28
Table A.44 – Non-linearity transformation parameter values of the Tnlt parameter.....	28
Table A.45 – Non-linearity transformation parameter values of the STnlt parameter (Tnlt = 1).....	29
Table A.46 – Non-linearity transformation parameter values of the STnlt parameter (Tnlt = 2).....	29
Table A.47 – Quantization default, precinct parameter values.....	30
Table A.48 – Quantization precinct component parameter values	32
Table A.49 – Ccap ² syntax and semantics.....	32
Table A.50 – Precinct length, tile-part header parameter values	33
Table A.51 – Srlt values and semantics.....	33
Table A.52 – Semantics of Jrlt ⁱ values when Srlt is in the range [0, 2 ³¹ – 1]	33
Table D.1 – Parent LUTs for $k > 0$ in the trellis of Figure D.3.....	41
Table D.2 – Description of functional blocks in Figure D.4	41
Table D.3 – Description of functional blocks in Figure D.5	42
Table D.4 – Look-up table for $A(s)$	43
Table D.5 – Look-up table for $S(s,q_k)$	43
Table D.6 – Description of functional blocks for Figure D.6.....	44
Table D.7 – Sub-band statistics required for LRA	45
Table D.8 – ρ_b parameters for TCQ.....	45
Table D.9 – Δ_b parameters for TCQ	45
Table D.10 – ρ_b parameters for SQ	46
Table D.11 – Δ_b parameters for SQ	46
Table D.12 – Description of functional blocks in Figure D.7	48
Table F.1 – Updates to contexts for significance propagation and cleanup coding passes	55
Table F.2 – Quantities for sub-band info calculation	59
Table F.3 – $S(ab)$ and $J(ab)$ as a function of $d_S(i)$	63
Table F.4 – $S(ab)$ and $J(ab)$ as a function of $d_R(i)$	63
Table F.5 – Characteristics for sample wavelet decomposition in Figure F.14.....	64
Table G.1 – Parameters for wavelet transformations	77
Table G.2 – Parameters of the 5-3 reversible wavelet transformation	82
Table G.3 – Parameters of the 13-7 reversible wavelet transformation	83
Table G.4 – Parameters of the 5-3 irreversible wavelet transformation.....	83
Table G.5 – Parameters of the irreversible 7-5 wavelet transformation.....	84
Table G.6 – Parameters of the irreversible 9-7 wavelet transformation.....	84
Table H.1 – Additional parameters for arbitrary wavelet transformations.....	85
Table H.2 – Minimum left extension length.....	89
Table H.3 – Minimum right extension length.....	89
Table H.4 – Parameters of the reversible Haar 2-2 wavelet transformation	95
Table H.5 – Parameters of the reversible 2-6 wavelet transformation	95

	Page
Table H.6 – Parameters of the reversible 2-10 wavelet transformation	95
Table H.7 – Parameters of the irreversible 6-10 wavelet transformation.....	96
Table H.8 – Parameters of the irreversible 10-18 wavelet transformation.....	96
Table M.1 – Example expression.....	151
Table M.2 – Expanded expression	151
Table M.3 – Example factored expression	151
Table M.4 – Example of a Reader Requirements expressions for Equations M-6 and M-7.....	153
Table M.5 – Example of a Reader Requirements box for Equations M-6 and M-7	153
Table M.6 – Reader Requirements table for Equations M-10 and M-11	154
Table M.7 – Reader Requirements box data for Equations M-10 and M-11	154
Table M.8 – Reader Requirements box data for Equations M-16 and M-17	155
Table M.9 – Example Reader Requirements box to test	155
Table M.11 – Items which can be extended through Recommendations International Standards	156
Table M.12 – Items which can be extended by registration	157
Table M.13 – Boxes defined within this Recommendation International Standard	163
Table M.14 – Legal values of the SF ⁱ field	165
Table M.15 – Format of the contents of the Reader Requirements box.....	167
Table M.16 – Format of the contents of the Data Reference box	168
Table M.17 – Format of the contents of the Fragment List box	169
Table M.18 – Format of the contents of the Cross-Reference box	170
Table M.19 – Legal C values	171
Table M.20 – BPC and BPC ⁱ parameters	172
Table M.21 – Format of the contents of the Image Header box	172
Table M.22 – Legal METH values.....	176
Table M.23 – Legal APPROX values	177
Table M.24 – Format of the contents of the Colour Specification box.....	177
Table M.24bis – Nominal maximum sample values.....	177
Table M.25 – Additional legal EnumCS values	178
Table M.26 – Format of the contents of the METHDAT field for the Enumerated method.....	179
Table M.27 – Format of the contents of the METHDAT field for the Any ICC method	180
Table M.28 – Format of the contents of the METHDAT field for the Vendor Colour method	180
Table M.28bis – Format of the METHDAT field for the Parameterized method	181
Table M.29 – Standard illuminant values for CIELab	182
Table M.30 – Format of the contents of the EP field for CIELab (EnumCS = 14)	183
Table M.30bis – Default Offset Values and Encoding of Offsets for the CIEJab Colourspace.....	184
Table M.31 – Format of the contents of the EP field for CIEJab (EnumCS = 19).....	184
Table M.32 – Colours indicated by the Asoc ⁱ field	185
Table M.33 – Otyp field values	186
Table M.34 – Format of the contents of the Opacity box.....	186
Table M.35 – Format of the contents of the Codestream Registration box.....	188
Table M.35bis	189
Table M.35ter – Common floating point formats (informative).....	189
Table M.36 – Format of the contents of the Composition box	190
Table M.37 – Format of the contents of the Composition Options box	191
Table M.38 – Ityp field values	191

Table M.39 – Format of the contents of the Instruction Set box	192
Table M.40 – Format of the contents of the INST ⁱ parameter in the Instruction Set box.....	194
Table M.41 – Format of the contents of the Association box.....	196
Table M.42 – AN ⁱ field values.....	196
Table M.43 – Format of the contents of the Number List box	196
Table M.44 – Legal Filter types.....	197
Table M.45 – Format of the contents of the Binary Filter box	198
Table M.46 – Format of the contents of the Graphics Technology Standard Output box	199
Table M.47 – Legal R ⁱ values	199
Table M.48 – Allowed Rtyp ⁱ values.....	200
Table M.49 – Format of the contents of the ROI Description box	200
Table M.49bis – Interpreting the 2 bit D field of Rtyp ⁱ for quadrilateral refinements.....	201
Table M.50 – Legal Styp values	202
Table M.51 – Legal Ptyp values	203
Table M.52 – Format of the contents of the Digital Signature box	203
Table N.1 – Format of the contents of the Image Creation box.....	215
Table N.2 – Format of the contents of the Content Description box	216
Table N.3 – Format of the contents of the History box.....	216
Table N.4 – Format of the contents of the Intellectual Property Rights box.....	217
Table N.5 – Format of the contents of the Image Identifier box	217
Table N.6 – Image Source values.....	218
Table N.7 – Scene type values	218
Table N.8 – Sensor technology values	220
Table N.9 – Exposure program values	224
Table N.10 – Metering mode values	225
Table N.11 – Scene illuminant values	225
Table N.12 – Back light values	225
Table N.13 – Auto focus values.....	226
Table N.14 – Name description values.....	241
Table N.15 – Date description values.....	242
Table N.16 – Additional name description values	245
Table N.17 – Address component type values.....	249
Table N.18 – Address type values.....	250
Table N.19 – Phone number type values	250
Table N.20 – Name component type values	253
Table N.21 – Latitude reference values	258
Table N.22 – Latitude values	258
Table N.23 – Longitude reference values	258
Table N.24 – Longitude values	258
Table N.25 – GPS Status values	259
Table N.26 – GPS Measure mode values	259
Table N.27 – GPS Speed reference unit values	259
Table N.28 – Direction reference values	259
Table N.29 – GPS Destination distance reference unit values	260

Introduction

This Recommendation | International Standard defines a set of lossless (bit-preserving) and lossy compression methods for coding continuous-tone, bi-level, grey-scale, colour digital still images, or multi-component images.

This Recommendation | International Standard:

- specifies extended decoding processes for converting compressed image data to reconstructed image data;
- specifies an extended codestream syntax containing information for interpreting the compressed image data;
- specifies an extended file format;
- specifies a container to store image metadata;
- defines a standard set of image metadata;
- provides guidance on extended encoding processes for converting source image data to compressed image data;
- provides guidance on how to implement these processes in practice.

INTERNATIONAL STANDARD
ITU-T RECOMMENDATION

**Information technology –
 JPEG 2000 image coding system – Extensions**

1 Scope

This Recommendation | International Standard defines a set of lossless (bit-preserving) and lossy compression methods for coding continuous-tone, bi-level, grey-scale, colour digital still images, or multi-component images.

This Recommendation | International Standard:

- specifies extended decoding processes for converting compressed image data to reconstructed image data;
- specifies an extended codestream syntax containing information for interpreting the compressed image data;
- specifies an extended file format;
- specifies a container to store image metadata;
- defines a standard set of image metadata;
- provides guidance on extended encoding processes for converting source image data to compressed image data;
- provides guidance on how to implement these processes in practice.

2 Normative references

The following Recommendations and International Standards contain provisions which, through reference in this text, constitute provisions of this Recommendation | International Standard. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies. At the time of publication, the editions indicated were valid. All Recommendations and Standards are subject to revision, and parties to agreements based on this Recommendation | International Standard are encouraged to investigate the possibility of applying the most recent edition of the Recommendations and Standards listed below. Members of IEC and ISO maintain registers of currently valid International Standards. The Telecommunication Standardization Bureau of the ITU maintains a list of currently valid ITU-T Recommendations.

3 Definitions

For the purposes of this Recommendation | International Standard, the following definitions apply. The definitions defined in Rec. ITU-T T.800 | ISO/IEC 15444-1, Clause 3 also apply to this Recommendation | International Standard, except for the terms decomposition level, sub-band and resolution, which are redefined in this clause.

3.1 attribute: XML construct that is a name-value pair extending or qualifying the meaning of an element.

3.2 cell: Optional subdivision of a tile used for low-memory encoding and decoding.
