Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 136, *Furniture*.

This third edition cancels and replaces the second edition (ISO 3055:1985), which has been technically revised.

The main changes compared to the previous edition are as follows:

- Specification of the scope;
- Terms and definitions of kitchen furniture and appliances added;
- Normative references revised;
- Requirements for the coordinating sizes (height, width and depth) of kitchen units and appliances given in more detail;
- Annexes A and B deleted.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The purpose of standardization of kitchen equipment is to allow components to be combined in arrangements, which are harmonious and rational, due to account being taken of ergonomic and economic considerations.

To this end, the following aspects are considered:

- the sizes of component parts;
- the specific areas of each item of equipment, taking into account the possibility of their complete or partial overlapping;
- the location of pipes (water, gas, drainage, electricity);
- the combinations of components.

This document has been prepared according to the principles of modular coordination in building.

Attention is drawn to the fact that there can be national or regional regulations concerning supply of services (e.g. gas, electricity, water).

Attention is also drawn to the fact that there can be national or regional regulations/guidelines to cater for people with special needs.

Kitchen equipment — Coordinating sizes

1 Scope

This document specifies dimensions for the height, width and depth of kitchen units and worktops. Additionally, it defines the space for integrating appliances, such as sink units, ovens, refrigerators, in kitchens.

This document does not apply to customized kitchens.

This document does not apply to kitchens for commercial use (e.g. in hotels, restaurants, and hospitals).

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1 Worktop

3.1.1 worktop

solid horizontal element attached to the top of a free standing or floor standing kitchen unit to provide a working surface

3.1.2 height of worktop

vertical distance from the floor to the top of the worktop

Note 1 to entry: See [Figure 1](#), h_1 .

3.1.3

depth of worktop

horizontal distance from the front edge to the rear edge of the worktop

Note 1 to entry: See [Figure 2](#), l_1 .

3.1.4

depth of working area

horizontal distance from the front edge of the worktop to the wall or wall attachment

Note 1 to entry: See [Figure 2](#), l_5 .

Note 2 to entry: A wall attachment is typically recess panelling or wall end profiles.
