About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC - webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 300 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 19 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

CONTENTS

FOREWORD.....	14
INTRODUCTION.....	16
1 Scope.....	17
1.1 General.....	17
1.2 About this document	17
1.3 What is not covered by this document.....	17
1.4 Future considerations	17
1.4.1 Choice of Encoding Mechanisms	17
1.4.2 Choice of Web Service Technologies.....	17
2 Normative references	18
3 Terms, definitions and abbreviated terms	18
3.1 Terms and definitions.....	18
3.2 Abbreviated terms.....	19
4 Overview	19
4.1 General.....	19
4.2 Message format	19
4.3 Profiles	20
4.4 Message archetypes	20
4.5 Header verb and noun	20
4.6 Example IEC 61968-100 messages.....	21
4.7 Message exchange patterns	21
4.7.1 General	21
4.7.2 Request/response message exchange pattern.....	21
4.7.3 Unsolicited event message exchange pattern	21
4.7.4 Consequential event message exchange pattern	22
4.8 Basic request/response message types	22
5 Message archetypes.....	23
5.1 General.....	23
5.2 Request message	23
5.2.1 General	23
5.2.2 Root element.....	23
5.2.3 Structure	23
5.2.4 Header element.....	24
5.2.5 Application-specific data.....	24
5.2.6 Side-effects of a request message.....	24
5.3 Response message.....	24
5.3.1 General	24
5.3.2 Root element	24
5.3.3 Structure	24
5.3.4 Header element.....	25
5.3.5 Application-specific data and status notifications	25
5.3.6 Simple acknowledgement message	25
5.4 Event message	26
5.4.1 General	26
5.4.2 Root element.....	26
5.4.3 Structure	26

5.4.4	Header element	26
5.4.5	Application-specific data	26
5.5	Fault message	27
5.5.1	General	27
5.5.2	Root element	27
5.5.3	Structure	27
5.5.4	Reply element	27
6	Elementary message exchange patterns	27
6.1	General	27
6.2	Request/response message exchange pattern	27
6.2.1	General	27
6.2.2	Response messages	28
6.3	Unsolicited event message exchange pattern	29
6.4	Consequential event message exchange pattern	29
6.5	Simple acknowledgement message exchange patterns	30
6.5.1	General	30
6.5.2	Request/response message exchange pattern with simple acknowledgement messages	31
6.5.3	Unsolicited event message exchange pattern with simple acknowledgement message	32
6.5.4	Consequential event message exchange pattern with simple acknowledgement messages	32
7	Message details	33
7.1	General	33
7.2	Message encoding	34
7.3	Schema definition and validation	34
7.4	Top-level structure	34
7.4.1	General	34
7.4.2	Structure of request messages	34
7.4.3	Structure of response messages	37
7.4.4	Structure of event messages	39
7.5	The <Header> element	42
7.5.1	General	42
7.5.2	Message header subelements	42
7.5.3	Message header for request messages	44
7.5.4	Message header for response messages	46
7.5.5	Message header for event messages	48
7.6	The <Reply> element	50
7.6.1	General	50
7.6.2	Structure	51
7.6.3	Reply subelements	51
7.6.4	The <Reply><Status> subelement	51
7.6.5	Combining the <Reply><Status><ObjectID>, <OperationSet>, <UpdateID> and <TransactionID> elements	58
7.6.6	The <Reply><Transaction> element	59
7.7	The <Payload> element	59
7.7.1	General	59
7.7.2	Payload subelements	59
7.7.3	The <Payload><OperationSet> element	60

7.7.4	The <Payload><ObjectUpdate> element.....	66
7.7.5	AbstractPayloadType data	68
7.7.6	Multiple abstract payloads	68
7.8	The <CompressedPayload> element.....	68
7.8.1	General	68
7.8.2	Structure	68
7.8.3	CompressedPayload elements.....	69
7.8.4	The <CompressedPayload><CompressionType> subelement	69
7.8.5	The <CompressedPayload><Base64> subelement	69
7.9	The Transaction Type	69
8	Constraints and conventions.....	70
8.1	General.....	70
8.2	Application-specific data	70
8.2.1	General	70
8.2.2	The AbstractPayloadType	71
8.2.3	Application-specific customisation	71
8.2.4	RDF data	71
8.3	Object management requests and notifications	71
8.3.1	General	71
8.3.2	Create request message.....	72
8.3.3	Change request message	72
8.3.4	Delete request message	73
8.3.5	Update request message	73
8.3.6	Object management notifications	74
8.4	Get requests	74
8.4.1	Making a get request	74
8.4.2	Specifying multiple constraints in a request message	75
8.4.3	Responding to a get request.....	76
8.5	Cancelling transactions	76
8.5.1	General	76
8.5.2	Message exchange pattern.....	76
8.5.3	Transactions IDs.....	77
8.5.4	Receiving a transaction ID	78
8.5.5	Sending a cancellation request message	78
8.5.6	Responding to a cancellation request message	78
8.6	Object identification	78
8.6.1	General	78
8.6.2	Rules for object identification.....	79
8.6.3	Identifying objects using an <mRID> element.....	79
8.6.4	Identifying objects using a <Name> element.....	79
8.6.5	Referencing objects	80
8.7	The ObjectIdentificationRevisionSets profile	81
8.7.1	General	81
8.7.2	Structure	81
8.7.3	Using the ObjectIdentificationRevisionSets profile	83
8.7.4	Adding one or more new identifiers.....	83
8.7.5	Removing one or more identifiers	84
8.7.6	Possible Errors Pertaining To ObjectIdentificationRevisionSets Requests	84

9	Transporting messages	84
9.1	General.....	84
9.2	Transporting over SOAP web services	85
9.2.1	General	85
9.2.2	Encoding of IEC 61968-100 messages inside SOAP messages	85
9.2.3	Example SOAP message	85
9.2.4	Mapping of IEC 61968-100 messages to SOAP messages.....	85
9.2.5	WSDL files.....	86
9.3	Transporting over JMS.....	87
9.3.1	General	87
9.3.2	Message exchange patterns	88
9.3.3	Application-level acknowledgement messages.....	88
9.3.4	JMS headers	88
Annex A	(normative) XSD files.....	90
A.1	General.....	90
A.2	The Message.xsd file	90
A.3	The AbstractPayloadType.xsd file	102
A.4	The LegacyObjectIdentificationRevisionSets.xsd File	103
A.5	The RDF.xsd file	108
Annex B	(normative) Template files	110
B.1	General.....	110
B.2	The GenericMessageWsdITemplate.txt file.....	110
B.3	The StrongMessageXsdTemplate.txt file.....	116
B.4	The StrongMessageWsdITemplate.txt file.....	128
Annex C	(informative) Example XSD profiles inheriting from AbstractPayloadType	135
C.1	GetMeterReadings profile	135
C.2	BinaryData profile	136
Annex D	(informative) Example IEC 61968-100:2021 messages	138
D.1	General.....	138
D.2	Messages dealing with object instantiation.....	138
D.2.1	General	138
D.2.2	Sequence diagram.....	138
D.2.3	Meter instantiation request (request message)	139
D.2.4	Meter instantiation response (step 4, success case)	141
D.2.5	Meter instantiation response (step 4, failure case).....	141
D.3	Messages dealing with the event notification of object instantiation	142
D.3.1	General	142
D.3.2	Sequence diagram.....	142
D.3.3	Publication of a meter instantiation (event message)	142
D.3.4	Publication of a meter instantiation (simple acknowledgement message).....	146
D.4	Messages dealing with requests for information concerning an object instantiation	146
D.4.1	General	146
D.4.2	Sequence diagram.....	146
D.4.3	Request for information concerning a meter instantiation (request message).....	147
D.4.4	Request for information concerning a meter instantiation (response message).....	148
D.5	Messages utilizing an operationset to enforce transactional integrity.....	149

D.5.1	General	149
D.5.2	Sequence diagram.....	149
D.5.3	Using an operationset to enforce transactional integrity (request message).....	150
D.5.4	Using an operationset to enforce transactional integrity (response message).....	153
D.6	Messages dealing with the publication of data	153
D.6.1	General	153
D.6.2	Sequence diagram.....	153
D.6.3	Publication of meter readings (event message).....	154
D.6.4	Publication of meter readings (simple acknowledgement message)	155
D.7	Messages dealing with an on-demand data request resulting in a single response.....	156
D.7.1	General	156
D.7.2	Sequence Diagram	156
D.7.3	On-demand meter reading message (request message)	157
D.7.4	On-demand meter reading message (response message).....	158
D.8	Messages dealing with an on-demand data request resulting in multiple responses	159
D.8.1	General	159
D.8.2	Sequence diagram.....	159
D.8.3	Request for an on-demand meter ping (request message)	160
D.8.4	Request for an on-demand meter ping (response message 1)	161
D.8.5	Request for an on-demand meter ping (response message 2)	162
D.8.6	Request for an on-demand meter ping (simple acknowledgement of message 2).....	163
D.8.7	Request for an on-demand meter ping (response message 3)	164
D.8.8	Request for an on-demand meter ping (simple acknowledgement of message 3).....	165
D.9	Messages dealing with historical data request	165
D.9.1	General	165
D.9.2	Sequence diagram.....	165
D.9.3	Historical meter read (request message)	166
D.9.4	Historical meter read (response message).....	167
D.10	Messages dealing with historical data request (responses spread over several messages).....	168
D.10.1	General	168
D.10.2	Historical meter read (response message 1 of 4)	169
D.10.3	Historical meter read (response message 2 of 4)	169
D.10.4	Historical meter read (response message 3 of 4)	170
D.10.5	Historical meter read (response message 4 of 4)	171
D.11	Messages dealing with multiple statuses within a response.....	172
D.11.1	General	172
D.11.2	Sequence diagram.....	173
D.11.3	Historical meter read (response message).....	174
D.12	Messages dealing with a consequential event message	176
D.12.1	General	176
D.12.2	Sequence diagram.....	176
D.12.3	Request for a meter connect (request message).....	177
D.12.4	Request for a meter connect (response message)	178

D.12.5	Request for a meter connect (event message)	179
D.12.6	Request for a meter connect (simple acknowledgement message).....	180
D.13	Using two operationsets to sequence multiple operations with transactional integrity.....	180
D.13.1	General	180
D.13.2	Using two OperationSets to read two meters before disconnecting them (request message).....	181
D.13.3	Using two OperationSets to read two meters before disconnecting them (response message)	182
D.14	Messages dealing with object deletion	184
D.14.1	General	184
D.14.2	Sequence diagram.....	184
D.14.3	Request to delete a meter (request message).....	185
D.14.4	Request to delete a meter (response message)	185
D.15	Messages dealing with cancellation of a single transaction	185
D.15.1	Meter control request message.....	185
D.15.2	Response message containing a single transaction id	186
D.15.3	Cancellation request (request message)	187
D.15.4	Cancellation request (response message)	187
D.16	Messages dealing with cancellation of multiple transactions	188
D.16.1	Response message containing multiple transaction IDs	188
D.16.2	Cancellation request (request message)	189
D.16.3	Cancellation request (response message)	190
D.17	Messages dealing with failed XSD validation	190
D.17.1	General	190
D.17.2	Message that fails XSD validation (request message).....	191
D.17.3	Message that fails XSD validation (response message)	191
D.18	Messages dealing with malformed requests	192
D.18.1	General	192
D.18.2	Message that is malformed (request message)	192
D.18.3	Message that is malformed (response message)	193
Annex E (informative)	Example IEC 61968-100:2021 messages for updating objects.....	194
E.1	General.....	194
E.2	CreateMeterConfig.xml	194
E.3	ModifyFormNumber.xml	195
E.4	RemoveFormNumber.xml.....	196
E.5	AddMeterMultiplier.xml	196
E.6	ModifyMeterMultiplierKind.xml	197
E.7	ModifyMeterMultiplierValue.xml.....	198
E.8	RemoveMeterMultiplierValue.xml	199
E.9	RemoveMeterMultiplier.xml	200
E.10	AddMeterSeal.xml.....	201
E.11	AddMeterSealKind.xml	201
E.12	ModifyMeterSealCondition.xml	202
E.13	RemoveMeterSealCondition.xml	203
E.14	RemoveMeterSeal.xml	204
E.15	ModifyProgramId.xml	205
E.16	RemoveProgramId.xml.....	205
E.17	AddChannel.xml.....	206

E.18	ModifyChannelReadingType.xml	207
E.19	RemoveChannel.xml	208
E.20	AddConnectDisconnectFunction.xml	209
E.21	RemoveConnectDisconnectFunction.xml	210
E.22	DeleteMeterConfig.xml	211
E.23	DeleteMeterConfig.xml	211
E.24	CreateMeterConfigs.xml	212
E.25	MultipleObjectChanges.xml	214
E.26	MultipleObjectChangesWithOperationSet.xml	216
Annex F (informative)	Examples of ObjectIdentificationRevisionSets Messages	220
F.1	General	220
F.2	Add an mRID for the meter object	220
F.3	Modify name two of the meter object	222
F.4	Add name three of the meter object	223
F.5	Remove Name One of the Meter Object	225
F.6	Modify the mRID of the meter object	226
F.7	Remove the mRID of the meter object	228
F.8	Add an mRID and modify name two of the meter object	229
F.9	Modify name two of the meter object and add name one of the customer object	230
F.10	Add name two of the customer object to carry a new IdentifiedObject.name	233
Annex G (informative)	Example IEC 61968-100:2021 messages illustrating the cross-product rule	235
G.1	General	235
G.2	Specifying "OR" operations over the selection criteria	235
G.3	Specifying "AND" operations over the selection criteria	235
G.4	Specifying a combination of logical "AND" and "OR" operations	236
G.5	Example of multiple AbstractPayloadType profiles in a single message	237
Annex H (informative)	Validation of received messages	239
H.1	General	239
H.2	Example message validation using Altova XMLSpy	239
H.3	Example message validation using a Java validator	240
Annex I (informative)	Significant changes between IEC 61968-100:2013 and IEC 61968-100:2021	241

INTERNATIONAL ELECTROTECHNICAL COMMISSION

APPLICATION INTEGRATION AT ELECTRIC UTILITIES – SYSTEM INTERFACES FOR DISTRIBUTION MANAGEMENT –

Part 100: IEC implementation profiles for application integration

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61968-100 has been prepared by IEC technical committee 57: Power systems management and associated information exchange. It is an International Standard.

Future standards in this series will carry the new general title as cited above. Titles of existing standards in this series will be updated at the time of the next edition.

This IEC 61968-100:2022 edition cancels and replaces the IEC 61968-100:2013 edition published in 2013. This edition constitutes a technical revision.

- a) This edition includes the following significant technical changes with respect to the previous edition: IEC 61968-100:2022 has been refined to remove ambiguities and redundancies. Informative and normative clauses are marked as such and, in the latter case, appropriate verbal forms of language are used;
- b) The messages defined by IEC 61968-100:2022 are in general not backwards compatible with those of IEC 61968-100:2013. Annex I lists the significant technical changes introduced since the publication of IEC 61968-100:2013 and provides appropriate suggestions for migrating to IEC 61968-100:2022.

The text of this International Standard is based on the following documents:

Draft	Report on voting
57/2446/FDIS	57/2455/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 61968 series, published under the general title *Application integration at electric utilities – System interfaces for distribution management*, can be found on the IEC website.

NOTE

The following print types are used:

- Literal text such as program fragments or XML elements in `Courier New 10`.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This document specifies how implementations of IEC 61968 may be made interoperable using common enterprise integration technologies. In particular, it describes how message payloads defined in IEC 61968 (Parts 3 to 9 and Part 13), IEC 61970 and IEC 62325 are to be exchanged between systems using transport mechanisms such as web services and the Java Message Service.

This document may also find usage beyond information exchanges defined for these International Standards such as for the integration of market systems or for general enterprise integration.

APPLICATION INTEGRATION AT ELECTRIC UTILITIES – SYSTEM INTERFACES FOR DISTRIBUTION MANAGEMENT –

Part 100: IEC implementation profiles for application integration

1 Scope

1.1 General

This part of IEC 61968 defines how messages may be exchanged between cooperating systems in order to facilitate the transfer of application-specific data. Such application-specific data include but are not limited to the message payloads defined in IEC 61968 (Parts 3 to 9 and Part 13), IEC 61970 and IEC 62325.

1.2 About this document

This document provides normative definitions for:

- a set of message archetypes (Clause 5);
- a set of message exchange patterns that both sending and receiving systems are expected to implement (Clause 6);
- the exact format of the messages that are to be transmitted over the various integration technologies including a precise description of the information that each message must contain (Clause 7);
- a set of constraints and conventions to which applications must adhere in order to facilitate message exchange using IEC 61968-100 (Clause 8);
- the details of how IEC 61968-100 messages should be implemented using various underlying transport mechanisms (Clause 9).

1.3 What is not covered by this document

Security considerations lie outside the scope of IEC 61968-100. This document defers to the IEC 62351 series for definitions and practices relating to the secure transmission of messages.

1.4 Future considerations

1.4.1 Choice of Encoding Mechanisms

This document prescribes XML as the normative encoding mechanism for all messages defined by this document.

Future editions of IEC 61968-100 may specify additional normative encoding methods including support for JSON (RFC 4627) documents whose semantics are defined by the IEC CIM and whose syntax is defined by an IETF JSON schema.

1.4.2 Choice of Web Service Technologies

This document provides normative definitions for the use of SOAP Web Services (9.2) and Java Message Service (9.3) for the transport of messages.

Future editions of IEC 61968-100 may specify additional normative web service technologies such as REST.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
