### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Recherche de publications IEC -

[webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 300 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 19 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

|                                                                                   |    |
|-----------------------------------------------------------------------------------|----|
| FOREWORD.....                                                                     | 8  |
| INTRODUCTION.....                                                                 | 11 |
| 1 Scope.....                                                                      | 13 |
| 2 Normative references .....                                                      | 13 |
| 3 Terms and definitions .....                                                     | 14 |
| 4 Concepts.....                                                                   | 16 |
| 4.1 Object.....                                                                   | 16 |
| 4.2 Aspect.....                                                                   | 17 |
| 4.3 Systems.....                                                                  | 19 |
| 4.4 Structuring.....                                                              | 19 |
| 4.5 Function.....                                                                 | 19 |
| 4.6 Products and components.....                                                  | 20 |
| 4.7 Location.....                                                                 | 21 |
| 4.8 Types.....                                                                    | 21 |
| 4.9 Object occurrences and product individuals .....                              | 21 |
| 4.10 Relations between concepts .....                                             | 22 |
| 5 Structuring principles.....                                                     | 23 |
| 5.1 General.....                                                                  | 23 |
| 5.2 Forming structures.....                                                       | 26 |
| 5.3 Function-oriented structure .....                                             | 28 |
| 5.4 Product-oriented structure.....                                               | 29 |
| 5.5 Location-oriented structure .....                                             | 30 |
| 5.6 Type-oriented structure.....                                                  | 31 |
| 5.7 Structures based on "other aspects" .....                                     | 31 |
| 5.8 Structures based on more than one aspect .....                                | 33 |
| 6 Construction of reference designations.....                                     | 34 |
| 6.1 General.....                                                                  | 34 |
| 6.2 Format of reference designations.....                                         | 35 |
| 6.2.1 Single level.....                                                           | 35 |
| 6.2.2 Multi-level.....                                                            | 36 |
| 6.2.3 Use of letter codes .....                                                   | 36 |
| 6.3 Different structures within the same aspect.....                              | 37 |
| 7 Reference designation set.....                                                  | 37 |
| 8 Designation of locations .....                                                  | 39 |
| 8.1 General.....                                                                  | 39 |
| 8.2 Assemblies .....                                                              | 39 |
| 9 Presentation of reference designations.....                                     | 41 |
| 9.1 Reference designations .....                                                  | 41 |
| 9.2 Reference designation set .....                                               | 42 |
| 9.3 Presentation of identifiers for the top-node.....                             | 43 |
| 10 Labelling.....                                                                 | 44 |
| 11 Presentation of properties for an object .....                                 | 45 |
| 12 Application of the reference designation system .....                          | 46 |
| Annex A (informative) Information model on the reference designation system ..... | 47 |
| A.1 General.....                                                                  | 47 |

|         |                                                                                            |    |
|---------|--------------------------------------------------------------------------------------------|----|
| A.2     | EXPRESS-G model .....                                                                      | 47 |
| A.3     | Entity descriptions .....                                                                  | 48 |
| A.3.1   | object .....                                                                               | 48 |

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**INDUSTRIAL SYSTEMS, INSTALLATIONS  
AND EQUIPMENT AND INDUSTRIAL PRODUCTS –  
STRUCTURING PRINCIPLES AND REFERENCE DESIGNATIONS –****Part 1: Basic rules****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 81346-1 has been prepared by IEC technical committee 3: Documentation, graphical symbols and representations of technical information, in close cooperation with ISO technical committee 10: Technical product documentation. It is an International Standard.

It is published as a double logo standard and has the status of a horizontal publication in accordance with IEC Guide 108.

This second edition cancels and replaces the first edition published in 2009. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) the scope includes a reference to IEC Guide 108 for being a horizontal publication;
- b) synchronization with IEC 81346-2:2019 and ISO 81346-12:2018;

- c) the introduction of the type aspect;
- d) introduction of an information model of the reference designation system;
- e) introduction of an information model for the framework of reference designation system to comply with International Standard 81346 series;
- f) introduction of recommendation for metadata for design structure management;
- g) introduction of rules and method for designation of relations between objects;
- h) introduction of requirements for development of sector-specific parts of the International Standard 81346 series;
- i) introduction of requirements for incorporation of sub-object in object structures;
- j) introduction of recommendations for documentation of the application of the International Standard 81346 series;
- k) introduced definition of new terms used;
- l) new rules added and existing rules modified;
- m) notes related to rules are converted to normative text as "Comment to Rule nn".

The text of this International Standard is based on the following documents:

| Draft       | Report on voting |
|-------------|------------------|
| 3/1541/FDIS | 3/1548/RVD       |

Full information on the voting for its approval can be found in the report on voting indicated in the above table. In ISO, the standard has been approved by 10 members out of 11 having cast a vote.

The language used for the development of this International Standard is English.

A list of parts of the 81346 International Standard, published under the general title *Industrial systems, installations and equipment and industrial products – Structuring principles and reference designations*, can be found on the IEC website.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/standardsdev/publications](http://www.iec.ch/standardsdev/publications).

In this document, *italic type* is used as follows:

- terms defined in Clause 3 (applies to the text of Clause 3 only);
- in the description of the EXPRESS model, entity names and attribute identifiers;
- commenting on the story from a structuring and reference designation perspective in Clause B.2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT** – The "colour inside" logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.

## INTRODUCTION

This document establishes a further development of earlier and withdrawn standards on item designation. It provides the basics for establishing models of plants, machines, buildings, infrastructure, etc.

This document specifies:

- principles for structuring of objects including associated information;
- rules on forming of reference designations based on the resulting structure.

By applying the structuring principles, even very large sets of information describing a complex system can be handled efficiently. In Annex B, the life-cycle story of an object shows how different structures and aspects are related to the sets of information.

The structuring principles and the rules for reference designations:

- are applicable to objects of both physical and non-physical character;
- provide a system that is easy to navigate within and easy to maintain;
- provide an excellent overview on a technical system since composite structures are simple to establish and understand;
- support alternative design and engineering processes in the life cycle of an object since they are based on the successively established results of this process and not on how the engineering process itself is carried out;
- allow, by accepting more than one aspect, that more than one coding principle can be applied;
- allow "old structures" to be handled together with "new structures" by using multiple unambiguous identifiers;
- support individual management for the establishment of reference designations and enable subsequent integration of modules into larger constructs;
- support the establishment of reusable modules, either as functional specifications or as physical deliverables;

NOTE The concept of reusable modules encompasses for example, for manufacturers: the establishment of contract independent modules, and, for operators of complex assemblies: the description of requirements in terms of supplier independent modules.

- support concurrent work and allow different partners within a project to add and/or remove data to the structured project result as it proceeds; and
- recognize time factor within the life cycle as important for the application of different structures based on different views on the considered technical system.

The rules for structuring of information and for the construction of reference designations forms the basis for creating a reference designation system (RDS) complying with the International Standard 81346 series. Such systems are used for structuring and designating objects based on the needs of the organization using them.

The rules listed above are based on the fundamental ideas provided in Annex M that were defined for the development of the predecessor document for this document.

Annex A provides an information model of the framework described in this document and in IEC 81346-2. Annex A includes also elements related to other publications where the application of the reference designation in accordance with International Standard 81346 is considered.

Figure 1 provides an overview on International Standards providing a consistent system for designation, documentation, and presentation of information. Annex A provides more information on the relations between the International Standard 81346 series and other publications applying reference designations.

**Figure 1 – International Standards providing a consistent system for designation, documentation and presentation of information**

This document describes the fundamental rules and methods for structuring of information and for the definition of reference designation of objects within buildings, infrastructure, industrial systems, installations and equipment and industrial products. These rules form a basis for the establishment of specific reference designation systems (RDS) for use by industries, enterprises, projects or other organizational contexts.

IEC 81346-2 establishes classification schemes with defined object classes and their associated letter codes. It is primarily intended for use in reference designations and for designation of generic types. Classes can also be used for other purposes, for example, by manufacturers to show multiple potential use of a product. In this way, the classification can enhance searchability.

Used in combination, this document and IEC 81346-2 define a fundamental framework for reference designations that is independent of the context in which reference designations are applied. This is applicable for objects in all technical disciplines and all branches of industry, and is applicable through the whole life-cycle of objects.

The International Standard 81346 series additionally includes parts that define sector-specific reference designation frameworks that tailor the fundamental reference designation framework of this document and IEC 81346-2 to the needs of specific sectors. Requirements for developing sector-specific parts of the International Standard 81346 series are given in Annex J.

# INDUSTRIAL SYSTEMS, INSTALLATIONS AND EQUIPMENT AND INDUSTRIAL PRODUCTS – STRUCTURING PRINCIPLES AND REFERENCE DESIGNATIONS –

## Part 1: Basic rules

### 1 Scope

This part of 81346 International Standard, published jointly by IEC and ISO, establishes general principles for the structuring of systems including structuring of information about systems.

Based on these principles, rules and guidance are given for the formulation of unambiguous reference designations for objects in any system.

The reference designation identifies objects for the purpose of creation and retrieval of information about an object and, where realized, about its corresponding component.

A reference designation labelled at a component is the key to finding information about that object among different kinds of documents.

The principles are general and are applicable to all technical areas (for example mechanical engineering, electrical engineering, construction engineering, process engineering). They can be used for systems based on different technologies or for systems combining several technologies.

This document is also a horizontal publication intended for use by technical committees in preparation of publications related to reference designations in accordance with the principles laid down in IEC Guide 108.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
