EUROPEAN STANDARD

EN 15163-2

NORME EUROPÉENNE

EUROPÄISCHE NORM

June 2022

ICS 73.120

Supersedes EN 15163:2017

English Version

Machines and installations for the exploitation and processing of natural stone - Safety - Part 2: Requirements for transportable diamond wire saws

Machines et installations pour l'exploitation et la transformation de la pierre naturelle - Sécurité - Partie 2 : Prescriptions pour les scies à fil diamanté transportables

Maschinen und Anlagen zur Gewinnung und Bearbeitung von Naturstein - Sicherheit - Teil 2: Anforderungen für mobile Diamantseilsägen

This European Standard was approved by CEN on 27 March 2022.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN 15163-2:2022) has been prepared by Technical Committee CEN/TC 151 "Construction equipment and building material machines - Safety", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2022, and conflicting national standards shall be withdrawn at the latest by December 2022.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 15163:2017.

This document has been prepared under a Standardization Request given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s) / Regulation(s).

For relationship with EU Directive(s) / Regulation(s), see informative Annex ZA, which is an integral part of this document.

This document deals with safety requirements of transportable diamond wire saws previously treated in EN 15163:2017 with safety requirements of stationary diamond wire saws, now treated in EN 15163-1:2022. As safety requirements related two types of machines have been separated, this standard edition is completely different from the previous one.

Safety requirements treated in Clause 4, information for use treated in Clause 5 and related annexes have been deeply modified, in addition, the following changes have been introduced:

- list of the significant hazards has been moved from Clause 4 to Annex A, according to 6.10.3.1 of CEN Guide 414;
- normative references have been modified and updated to Clause 2;
- new terms and definitions have been introduced and improved to Clause 3 (e.g. transportable diamond wire saw; coated diamond wire, cutting operations);
- Annex ZA has been modified according to the last edition of CEN Guide 414.

Any feedback and questions on this document should be directed to the users' national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

This document has been prepared to be a harmonized standard to provide one means of conforming to the essential health and safety requirements of the Machinery Directive and associated EFTA Regulations.

This document is a type-C standard as stated in EN ISO 12100.

This document is of relevance, in particular, for the following stakeholder groups representing the market players with regard to machinery safety:

- machine manufacturers (small, medium and large enterprises);
- health and safety bodies (regulators, accident prevention organizations, market surveillance, etc.).

Others can be affected by the level of machinery safety achieved with the means of the document by the above-mentioned stakeholder groups:

- machine users/employers (small, medium and large enterprises);
- machine users/employees (e.g. trade unions, organizations for people with special needs);
- service providers, e.g. for maintenance (small, medium and large enterprises);
- consumers (in case of machinery intended for use by consumers).

The above-mentioned stakeholder groups have been given the possibility to participate at the drafting process of this document.

The machinery concerned and the extent to which hazards, hazardous situations or hazardous events are covered are indicated in the scope of this document.

When requirements of this type-C standard are different from those which are stated in type-A or type-B standards, the requirements of this type-C standard take precedence over the requirements of the other standards for machines that have been designed and built according to the requirements of this type-C standard.

1 Scope

This document deals with all significant hazards, hazardous situations and events which are relevant to transportable diamond wire saws, used in quarries for cutting natural stones (e.g. marble, granite), when they are used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer (see Annex A).

For this document, the intended use of machine is limited by the following cutting operations, defined in Clause 3:

- 1) vertical cut (see 3.16);
 - a) mountain vertical cut (see 3.16.1);
 - b) mountain side vertical cut (see 3.16.2);
 - c) block vertical cut (see 3.16.3);
 - d) overhead underslung vertical cut (see 3.16.4);
- 2) horizontal cut (see 3.17);
 - a) horizontal cut with one side open (see 3.17.1);
 - b) horizontal cut with two sides open (see 3.17.2);
- 3) block inclined cut (see 3.18).

Cutting operations listed above are performed without any path variation (see 3.11).

This document does not deal with any other cutting operation not listed above or defined in Clause 3.

This document deals only with transportable diamond wire saws using coated diamond wire as tool.

This document specifies the appropriate technical measures to eliminate or reduce risks arising from the significant hazards.

This document deals with all significant hazards that could occur within the expected lifetime of the machinery including the phases of transport, assembly, dismantling, disabling and scrapping.

This document does not deal with the significant hazards arising by the use of other facilities/devices not described in this document, that could be fitted on the machines or that could be used during the work cycle.

This document does not apply to:

- i) machines intended for operation in a potentially explosive atmosphere;
- ii) machines which are manufactured before the date of publication of this document.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN ISO 12100:2010 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1

transportable diamond wire saw

integrated fed machine, generally used in quarries or similar sites, designed for cutting natural stones (e.g. marble, granite) by the use of a coated diamond wire as tool and intended to be easily transported to several points of the quarry by the use of appropriate provisions and other machines; transportable diamond wire saw is powered by an electric motor as main drive, for cutting natural stones into benches, blocks using an only coated diamond wire as tool and where the cutting is performed by the movement of the wire joined to moving back of the machine on its rail

Note 1 to entry: See Figures 1 to 3.

Note 2 to entry: Transportable diamond wire saws are generally intended for outdoor use, usually in quarries.

Note 3 to entry: During the cutting operation, the coated diamond wire can be cooled by water.
