About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD	4
1 Scope	6
2 Normative References	7
3 Terms and definitions	8
4 Key principles reminder	10
4.1 General	10
4.2 Namespace introduction	10
4.2.1 General	10
4.2.2 Basic namespaces	11
5 Main cases of extensions of IEC 61850	12
5.1 Namespace extensions and associated rules	12
5.1.1 General	12
5.1.2 Domain namespaces	12
5.1.3 Product standard namespaces	12
5.1.4 Transitional namespaces	13
5.1.5 Private namespaces	13
5.2 IEC 61850 profiles for domains	13
5.3 Mapping of IEC 61850 data model to other protocols at CDC level	13
6 What to extend in relation with IEC 61850?	14
6.1 List of basic requirements	14
6.1.1 General	14
6.1.2 IEC 61850 structure reminder	14
6.1.3 Main deliverables and their positioning in IEC 61850 documentation structure	15
6.1.4 Intellectual property requirements	16
6.1.5 Editorial Recommendations	17
6.1.6 Data Model extension requirements	19
6.1.7 XML namespace extensions	28
6.1.8 Cyber-security requirements	29
6.1.9 Conformance Testing requirements	29
6.1.10 Maintenance of standard extension document	29
6.1.11 Backward compatibility treatment	34
6.2 List of IEC 61850 flexibilities	37
6.2.1 General	37
6.2.2 Data Model flexibilities	37
6.2.3 Communication services	39
6.2.4 SCL language	39
6.3 Allowed flexibilities per extension cases	41
7 The main activities for extending IEC 61850	43
7.1 Typical activities applying to all types of extension	43
7.1.1 General	43
7.1.2 List the main use cases for extending IEC 61850 -> deliverable P1	44
7.1.3 Ensure knowledge of the existing IEC 61850 content	44
7.1.4 Identify possible IEC 61850 gaps	44
7.1.5 Build-up IEC 61850 extensions	44
7.1.6 Maintain IEC 61850 extensions	44

7.2	Define a standard namespace (product, domain or transitional) – if needed -> deliverable P2a or P2b	44
7.2.1	General	44
7.2.2	Get a model manager nominated	45
7.2.3	Get the proposed model reviewed.....	45
7.2.4	Publish a namespace extension.....	45
7.3	Define "standard" profile(s) – if needed -> deliverable P3 (and P4)	46
7.3.1	General	46
7.3.2	Define interoperability objectives	46
7.3.3	Publish profile(s) -> deliverable P3	46
7.3.4	Publish profile(s) testing -> deliverable P4.....	46
Annex A (informative) IEC 61850 roadmap (example)		47

INTERNATIONAL ELECTROTECHNICAL COMMISSION

COMMUNICATION NETWORKS AND SYSTEMS FOR POWER UTILITY AUTOMATION –

Part 1-2: Guidelines on extending IEC 61850

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

This consolidated version of the official IEC Standard and its amendment has been prepared for user convenience.

IEC TS 61850-1-2 edition 1.1 contains the first edition (2020-06) [documents 57/2084/DTS and 57/2145/RVDTS] and its amendment 1 (2022-07) [documents 57/2370/DTS and 57/2408/RVDTS].

IEC TS 61850-1-2 has been prepared by IEC technical committee TC 57: Power systems management and associated information exchange. It is a Technical Specification.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 61850 series, published under the general title *Communication networks and systems*, can be found on the IEC website.

The committee has decided that the contents of the base publication and its amendment will remain unchanged until the stability date indicated on the IEC web site under webstore.iec.ch in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

COMMUNICATION NETWORKS AND SYSTEMS FOR POWER UTILITY AUTOMATION –

Part 1-2: Guidelines on extending IEC 61850

1 Scope

This part of IEC 61850, which is a technical specification, is intended for any users but primarily for standardization bodies that are considering using IEC 61850 as a base standard within the scope of their work and are willing to extend it as allowed by the IEC 61850 standards. This document identifies the required steps and high-level requirements in achieving such extensions of IEC 61850 and provides guidelines for the individual steps.

Within that scope, this document addresses the following cases:

- The management of product-level standards for products that have an interface based on IEC 61850
- The management of domain-level standards based on IEC 61850
- The management of transitional standards based on IEC 61850
- The management of private namespaces based on IEC 61850
- The development of standards offering the mapping of IEC 61850 data model at CDC level
- The development and management of IEC 61850 profiles for domains (underlying the role of IEC TR 62361-103 and IEC TR 61850-7-6)

This document includes both technical and process aspects:

On the technical side, this document:

- Highlights the main basic requirements (mostly referring to the appropriate parts of the series which host the requirements or recommendations)
- Lists all possible flexibilities offered by the standards
- Defines which flexibilities are allowed/possible per type of extension cases

On the process side, the document covers:

- The initial analysis of how the existing IEC 61850 object models and/or communication services may be applied and what allowed extensions may be required for utilizing them in new or specific domains (including private ones). The results of that step are expected to be documented
- The extension of the IEC 61850 object models for new domains. The typical associated work is to identify existing logical nodes which can be reused "as is", to determine if existing logical nodes can be extended, or to define new logical nodes
- The purpose and process to use transitional namespaces, which are expected to be merged eventually into an existing standard namespace
- The management of standard namespaces
- The development of private namespaces

2 Normative References

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

code component

part of a standard document which has to be copied/modified from the IEC publication by any potential users of the standards.

Note 1 to entry: Code components are components included in IEC standards that are intended to be directly processed by a computer and also includes any text found between the markers <CODE BEGINS> and <CODE ENDS>, or otherwise clearly labelled in this standard as a code component.

3.2

namespace

domain in which any name and its related information is univocal

3.3

IEC 61850 basic namespace

data model namespace hosted in the IEC 61850 core standard (namely related to IEC 61850-7-2, IEC 61850-7-3, IEC 61850-7-4 parts)

Note 1 to entry: Refer to IEC 61850-7-1, "Namespace".

Note 2 to entry: The 61850-7-4 namespace content may be revised in future in order to discriminate the elements which are generic from the ones which are substation specific.

3.4

IEC 61850 domain namespace

data model namespace which extends IEC 61850 with the purpose of better supporting an application domain

Note 1 to entry: Refer to IEC 61850-7-1, "Namespace".
