About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTRIC VEHICLE CONDUCTIVE CHARGING SYSTEM –**Part 1-1: Specific requirements for electric vehicle
conductive charging system using type 4 vehicle coupler**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

A PAS is an intermediate specification made available to the public and needing a lower level of consensus than an International Standard to be approved by vote (simple majority).

IEC PAS 61851-1-1 has been processed by IEC technical committee 69: Electrical power/energy transfer systems for electrically propelled road vehicles and industrial trucks.

The text of this PAS is based on the following document:

This PAS was approved for publication by the P-members of the committee concerned as indicated in the following document

Draft PAS	Report on voting
69/860/DPAS	69/869/RVDPAS

Following publication of this PAS, which is a pre-standard publication, the technical committee or subcommittee concerned may transform it into an International Standard.

This PAS shall remain valid for an initial maximum period of 2 years starting from the publication date. The validity may be extended for a single period up to a maximum of 2 years, at the end of which it shall be published as another type of normative document or shall be withdrawn.

This document is to be read in conjunction with IEC 61851-1:2017. The clauses of particular requirements in this document supplement or modify the corresponding clauses in IEC 61851-1:2017. Where the text of subsequent clauses indicates an "addition" to or a "replacement" of the relevant requirement, test specification or explanation of IEC 61851-1:2017, these changes are made to the relevant text of IEC 61851-1:2017, which then becomes part of this document. Where no change is necessary, the words "Clause X or Subclause X.Y of IEC 61851-1:2017 is applicable" are used."

INTRODUCTION

Currently, three AC charging couplers are defined in the IEC 62196 series, namely type 1 adopted in North America and Japan, type 2 proposed by Germany, and type 3, which is not widely used.

This document introduces an AC charging system widely used in China and some other markets. The number of BEV and PHEVs using the Chinese AC system has exceeded 5 million, and public AC charging facilities have exceeded 400 000 in China alone. At the IEC TC69 WG12 meeting held in Shanghai in November 2019, China's interpretation of the control pilot circuits and compatibility with existing IEC 61851-1 was accepted.

Taking into account the long standard maintenance cycle for IEC 61851-1, at the WG12 meeting of TC 69 in December 2021, it is recommended that the Chinese AC charging system be published in IEC as PAS first and then be discussed and merged into IEC 61851-1 Ed.4 when it is published in this maintenance cycle.

ELECTRIC VEHICLE CONDUCTIVE CHARGING SYSTEM –

Part 1-1: Specific requirements for electric vehicle conductive charging system using type 4 vehicle coupler

1 Scope

This document applies to a new type of AC EV supply equipment for charging electric road vehicles, with a rated supply voltage up to 1 000 V AC and a rated output voltage up to 1 000 V AC.

This document provides specific requirements for AC charging system using type 4 vehicle coupler.

Type 4 vehicle coupler is under consideration by SC23H.

Vehicle inlet and vehicle connector of type 4 are intended to be used for charging in modes 2 and 3, case C.

2 Normative references

This clause of IEC 61851-1:2017 is applicable.

3 Terms and definitions

This clause of IEC 61851-1:2017 is applicable.

4 General requirements

This clause of IEC 61851-1:2017 is applicable.

5 Classification

This clause of IEC 61851-1:2017 is applicable, except as follows.

5.1.2 Characteristics of power supply output

This subclause of IEC 61851-1:2017 is not applicable.

6 Charging modes and functions

This clause of IEC 61851-1:2017 is applicable, except as follows:

6.2.3 Mode 3

Addition after the last paragraph:

NOTE In the following countries, the rated output current of the EV supply equipment is limited to 32 A for single phase and to 63 A for three phases: CN.
