## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted (see [www.iso.org/directives](http://www.iso.org/directives) or [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)) or the IEC list of patent declarations received (see <https://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html). In the IEC, see [www.iec.ch/understanding-standards](http://www.iec.ch/understanding-standards).

This document was prepared by SNIA (as Swordfish Scalable Storage Management API Specification, Version, 1.2.4a) and drafted in accordance with its editorial rules. It was adopted, under the JTC 1 PAS procedure, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*.

This second edition cancels and replaces the first edition (ISO/IEC 5965:2021), which has been technically revised.

The main changes are as follows:

- document has been aligned with DMTF's Redfish Forum 2021.1 release of the Redfish Specification, schema bundle, and other supporting materials;
- support for NVMe and NVMe-oF has been added, expanding the API to support the management of NVMe and NVMe-oF devices and systems;
- the Swordfish Standalone Configuration has been added in the /Storage collection at the ServiceRoot. This simplification of the hierarchy features Storage systems at the ServiceRoot and makes standalone implementations easier to instrument;
- substantial schema changes have been made, including:
  - enhancements to Volume, including new Actions (e.g., ChangeRAIDLayout, ForceEnable); addition of InitializeMethod, IOPerfModeEnabled, and OwningStorageResource and link to JournalingMedia; added InitializeMethod property; added IsBootCapable,

- enhancements to StoragePools,
- addition of NVMeDomain schema, and Split NVMeFirmwareImage and NVMeDomains schemas,
- deprecation of use of NetworkPort; replacement with Port;
- security has been improved, including:
  - new requirements added to NVMeDrive to conform to schema updates for SecureErase,
  - enhancement of CHAP definitions and usage in StorageGroup;
- Profiles have been expanded, including:
  - addition of new profiles for Access Rights management, Connectivity Rights management, Management Controllers, NVMe EBOF, PCIe JBOF, and NVMe-oF,
  - movement of Swordfish profiles to SwordfishInteroperabilityProfile as base – extends Redfish Interoperability Profile, adding support for “conditionals” and comparison for Required Profiles,
  - update of FeaturesRegistry to v1.3.0 to correspond to latest versions of all profiles,
  - updates in multiple profiles to correct conformance to interoperability schema. Modifications to support change for new RequiredProfiles conditionals support.
  - addition of new profile for Swordfish NVMe Front End (used by complex devices such as arrays),
  - enhancement of profiles to include support / requirements for /Storage (move support to v1.1.0 level),
  - addition of NVMe drive, Advanced Features and Ethernet Attach profiles,
  - enhancement of Swordfish event profile,
  - addition of SupportedPoolTypes to StoragePool Profiles.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html) and [www.iec.ch/national-committees](http://www.iec.ch/national-committees).

## **DISCLAIMER**

The information contained in this publication is subject to change without notice. The SNIA makes no warranty of any kind with regard to this publication, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. The SNIA shall not be liable for errors contained herein or for incidental or consequential damages in connection with the furnishing, performance, or use.

Suggestions for revisions should be directed to <http://www.snia.org/feedback/>.

## **Current Revision**

SNIA is actively engaged in expanding and refining the Swordfish documentation. The most current revision can be found on the SNIA web site at [https://www.snia.org/tech\\_activities/standards/curr\\_standards/swordfish](https://www.snia.org/tech_activities/standards/curr_standards/swordfish).

## **Contact SNIA**

Current SNIA practice is to make updates and other information available through their web site at <http://www.snia.org>.

## **FEEDBACK AND INTERPRETATIONS**

Requests for interpretation, suggestions for improvement and addenda, or defect reports are welcome. They should be sent via the SNIA Feedback Portal at

<http://www.snia.org/feedback/> or by mail to the Storage Networking Industry Association, 4360 ArrowsWest Drive, Colorado Springs, Colorado 80907, U.S.A.

## **INTENDED AUDIENCE**

This document is intended for use by individuals and companies engaged in storage management.

## **VERSIONING POLICY**

This document is versioned material. Versioned material shall have a three-level revision identifier, comprised of a version number ‘v’, a release number ‘r’ and an errata number ‘e’. Future publications of this document are subject to specific constraints on the scope of change that is permissible from one revision to the next and the degree of interoperability and backward compatibility that should be assumed between products designed to this standard. This versioning policy applies to all SNIA Swordfish versioned materials.

**Version Number:** Versioned material having version number ‘v’ shall be backwards compatible with all of revisions of that material that have the same version number ‘v’. There is no assurance of interoperability or backward compatibility between revisions of a versioned material with different version numbers.

**Release Number:** Versioned material with a version number ‘v’ and release number ‘r’ shall be backwards compatible with previous revisions of the material with the same version number, and a lower release number. A minor revision represents a technical change to existing content or an adjustment to the scope of the versioned material. Each minor revision causes the release number to be increased by one.

**Errata Number:** Versioned material having version number ‘v’, a release number ‘r’, and an errata number ‘e’ should be backwards compatible with previous revisions of the material with the same version number and release number (“errata versions”). An errata revision of versioned material is limited to minor corrections or clarifications of existing versioned material. An errata revision may be backwards incompatible, if the incompatibility is necessary for correct operation of implementations of the versioned material.

## **Revision History**

The evolution of this document is summarized in Table 1.

**Table 1:** Revision history

Date	Rev	Notes
19 September 2016	1.0.0	Initial Release
12 October 2016	1.0.1	Errata release for general clean up and formatting consistency
1 November 2016	1.0.2	Errata release to change multiple collections' types from collections (arrays) to ResourceCollections to conform to Redfish usage guidelines  Change multiple collections' types from collections (arrays) to ResourceCollections to conform to Redfish usage guidelines and move NavigationProperties from Links section.
24 January 2017	1.0.3	Errata release to move complex types and enum to versioned namespace  Schedule schema: add property  json schema fix (Swordfish to swordfish)  Specification enhancements, multiple areas  User's guide: multiple new use cases and new document section
25 April 2017	1.0.4	Errata release with minor updates to schema: move FileShare collection, integrate DMTF and SNIA versions of Volume, fix incorrect property references and update descriptions. Update mockups. User's guide: Update cross-references.
3 October 2017	1.0.5	Errata release to include schema simplifications and other lessons from initial implementations, as well as general cleanup of specification.
13 February 2018	1.0.6	Updated Storage Systems model – added notion of Integrated Service Configuration in addition to (and named) Hosted Service Configuration  Added ComplexType common definition section

Date	Rev	Notes
12 October 2018	1.0.7	<p>Added/updated common Redfish property definitions</p> <p>Updates to conform to new SNIA templates.</p> <p>Enhanced Spare Capacity Management Model; Deprecated Remaining Capacity</p> <p>Added OpenAPI support: schema references and OpenAPI YAML files</p> <p>Added iSCSI properties for CHAP</p> <p>Event usage enhancements and guidance</p> <p>Volume schema updates – RAID Type enum (deprecating VolumeType usage), add ReplicaTargets</p> <p>Schema updates: Annotations enhancements: Capabilities designations, owning entities, Redfish.Required usage</p> <p>Clarified and updated ClassOfService IsDefault property usage</p> <p>Updated Capabilities location in hierarchy</p> <p>Fix cardinality issue of StorageReplicaInfo usage in StorageGroups and Volume</p> <p>Consolidate Client and Server Endpoint Groups into single Endpoint Group entity (deprecate usage of separate Client Endpoint Group and Server Endpoint Group)</p> <p>Add MappedVolume construct to StorageGroup – adds LUN info and other properties</p> <p>Clarified and updated ClassOfService IsDefault property usage</p> <p>Updated Capabilities location in hierarchy</p> <p>Fix cardinality issue of StorageReplicaInfo usage in StorageGroups and Volume</p>

Date	Rev	Notes
8 November 2018	1.0.7a	<p>Consolidate Client and Server Endpoint Groups into single Endpoint Group entity (deprecate usage of separate Client Endpoint Group and Server Endpoint Group)</p> <p>Add MappedVolume construct to StorageGroup – adds LUN info and other properties</p>
22 August 2019	1.1.0	<p>Restored RAIDType property that was missing from 1.0.7</p> <p>Minor correction to schema versioning</p> <p>Restructured to add features and profiles</p> <p>Add description of SupportedFeatures usage and requirements</p> <p>Add requirements for subsets of Add language to clarify support for use with and without the class of service (now an optional feature)</p> <p>Added descriptions of support for seamless extension of Redfish Storage model to Swordfish</p> <p>Add updated model diagrams to reflect new model permutations</p> <p>Added descriptions of new constructs (e.g., Consistency Groups)</p> <p>Cleaned up references to Redfish Specification based on latest version</p> <p>Add Status Codes clarification and constraints section</p>
12 November 2019	1.1.0	Released as Technical Position
12 November 2019	1.1.0a	<p>Released as Corrected Technical Position</p> <p>Formatting fixes – word wrap in pdf doc format to fix truncated lines</p> <p>Consistent object labeling in images (replace drive with disk)</p>

Date	Rev	Notes
		Editorial and grammar changes and cleanup to status code guidance section
24 March 2020	1.1.0b	<p>Released as Corrected Technical Position</p> <p>TLS requirements now based on both ISO and SNIA standards</p> <p>Redfish references now based on both ISO and SNIA standards</p> <p>Bibliography added</p>
29 May 2020	1.2.0	<p>Note: This release is done in conjunction with the DMTF's Redfish Forum Work-in-Progress June 2020 release of DSP-IS0014 (v0.95), which contains multiple schema to support this work. Both are released as Working Drafts / work-in-progress for public review, and plan simultaneous releases in early fall 2020 to support full technical specification level capability and availability.</p> <p>Functionality availability in Swordfish includes:</p> <ul style="list-style-type: none"> <li>• Enhancements to Volume, StoragePools</li> <li>• New schema: NVMeDomain</li> </ul> <p>Other supporting documentation released in conjunction with this specification and schema bundle:</p> <ul style="list-style-type: none"> <li>• Multiple mockups reflecting multiple implementation permutation options (available on swordfishmockups.com)</li> <li>• Model overview documentation (NVMe to RF/SF Model Mapping Working Draft, dated May 2020)</li> </ul>
18 August 2020	1.2.1	<p>Note: This release is done in conjunction with the DMTF's Redfish Forum 2020.3 Release of the Redfish Specification, schema bundle and other supporting materials.</p> <p>Functionality availability in Swordfish includes:</p>
12 July 2022		

Date	Rev	Notes
		<ul style="list-style-type: none"> <li>• NVMe Mapping Support, Enhancements to Volume, StoragePools</li> </ul> <p>Additional Enhancements in the Specification and schema:</p> <ul style="list-style-type: none"> <li>• Added InitializeMethod property to Volume.</li> <li>• Made DedicateSpareDrives ReadWrite-able</li> <li>• Added enhanced Volume Access Capabilities and usage in StorageGroup.</li> <li>• Fix multiple URI issues across various schema.</li> </ul> <p>Updated formatting of tables to support automatic table numbering and ISO compatible table representation.</p>
29 September 2020	1.2.1a	Added bibliography and updated TLS references
20 October 2020	1.2.1c	Updated with additional Redfish.URI annotations.
31 October 2020	1.2.1c	Released as SNIA Standard
2 March 2021	1.2.2	<p>Added sections to document use of complex types.</p> <p>Updated common properties sections.</p> <p>Schema changes:</p> <p>Add actions to Add and Remove drives directly from StoragePool.</p> <p>Split NVMeFirmwareImage and NVMeDomains schemas.</p> <p>Deprecate use of NetworkPort; replace with Port.</p> <p>Update Redfish.URI references.</p> <p>Corrected \$ref references in JSON schema files.</p> <p>Fix incorrect references in deprecated JSON files.</p>
30 August 2021	1.2.3	<p>Adds updates / corrections to Redfish.URI annotations</p> <p>Add IsBootCapable to Volume</p>

Date	Rev	Notes
		Add SupportedPoolTypes to StoragePool
5 December 2021	1.2.3	Release as SNIA Standard
12 April 2022	1.2.4	<p>Release as Working Draft. Schema changes:</p> <ul style="list-style-type: none"> <li>• FeaturesRegistry: Errata fix – make Features property a collection.</li> <li>• IOStatistics: clarify intent regarding reset / wrap.</li> <li>• StoragePool: errata fixes for Actions.</li> <li>• Volume: errata fixes for Actions. Add: LBAFormatsSupported property to NVMeNamespaceProperties.</li> </ul>
12 July 2022	1.2.4a	<p>Release as SNIA Standard.</p> <p>Includes Errata fixes to multiple profiles.</p>

## About SNIA

The Storage Networking Industry Association (SNIA) is a non-profit organization made up of member companies spanning information technology. A globally recognized and trusted authority, SNIA's mission is to lead the storage industry in developing and promoting vendor-neutral architectures, standards and educational services that facilitate the efficient management, movement and security of information.

## Acknowledgements

The SNIA Scalable Storage Management Technical Work Group, which developed and reviewed this work in progress, would like to recognize the significant contributions made by the following members listed in Table 2.

## 1 Abstract

The Swordfish Scalable Storage Management API (“Swordfish”) defines a RESTful interface and a standardized data model to provide a scalable, customer-centric interface for managing storage and related data services. It extends the Redfish Scalable Platforms Management API Specification (DSP0266) from the DMTF.

## 2 Scope

### 2.1 Document Goals

Swordfish extends the Redfish Scalable Platforms Management API Specification to define a comprehensive, RESTful API for storage management that addresses block storage, file systems, object storage, and storage network infrastructure. It is centered around common operational and business concerns of storage management, including:

- Configuration and provisioning
- Monitoring
- Event and log management
- Performance assessment
- Diagnostics
- Fault detection and remediation
- Security
- Accounting and resource consumption

Swordfish's storage model is built around well-defined classes of service, which provide a means to map high-level business goals and objectives to specific, storage-based actions and requirements, in a clear and consistent way that can be applied uniformly across a broad spectrum of storage configurations and storage types (e.g., block storage, file systems, object stores). Common storage management functionality covered by class of service includes snapshots, replication, mapping and masking, and provisioning.

The Redfish specification provides the protocols and a core set of data models and behaviors for the management of systems. It defines the elements and behaviors that are mandatory for all Redfish implementations. Additionally it defines additional elements and behaviors that can be chosen by system vendors or manufacturers. The specifications also defines points at which OEM (system vendor) extensions can be provided by a given implementation. The specifications specifies normative requirements for Redfish Services and associated materials, such as Redfish Schema files. The Redfish specifications does not set requirements for Redfish clients, but will indicate what a Redfish client should do in order to access and utilize a Redfish Service successfully and effectively.

The Swordfish specification defines additional data models and behaviors for the management of storage systems and storage infrastructure. A Swordfish implementation shall conform to all requirements specified in the Redfish specifications.

Swordfish is suitable for a wide range of storage, from small-scale object drives, integrated RAID cards or RBODs providing storage services, to external disk arrays or file servers, to infrastructure providing storage services for converged, hyperscale and large scale cloud environments.

This document defines the Swordfish Scalable Storage Management API.

## 2.2 Audience Assumptions

As Swordfish is designed as an extension of the Redfish specification, this document is written with the presumption that the reader has a detailed understanding of the Redfish specification. This document cannot be fully understood without that context.

### 3 Normative References

#### 3.1 Overview

The documents referenced in Table 3 are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

#### 3.2 Approved references

The approved references that contribute to this document are summarized in Table 3.

**Table 3:** Approved normative references
