Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 168, *Prosthetics and orthotics*.

This third edition cancels and replaces the second edition (ISO 8549-2:2020), which has been technically revised.

The main changes are as follows:

- the exclusion of wearers of the prostheses;
- inclusion of upper and lower limb prosthetic systems;
- editorial update.

A list of all parts in the ISO 8549 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The terms and definitions provided in this document reflect the changes in the terminology commonly used in the field of prosthetics since the publication of the first edition of this document, i.e. ISO 8549-2:1989.

This vocabulary is intended to help practitioners describe the devices they supply in a standardized manner. It is also relevant to epidemiologists and national health officials.

See also WHO International Classification of Impairments, Disabilities and Handicaps, published by the World Health Organization, Geneva, 1980.

Prosthetics and orthotics — Vocabulary —

Part 2: Terms relating to external limb prostheses

1 Scope

This document defines terms used to describe external limb prostheses.

The terms related to the amputation level used in this document are described in ISO 8549-4.

The types of component used in the construction of prostheses are classified and described in ISO 13405-1, ISO 13405-2 and ISO 13405-3.

For the purposes of this document, the abbreviated term 'prosthetics' and its derivatives only apply to external limb prosthetics.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1

upper limb prosthetic system

collection of compatible components that can be integrated to produce a range of different upper limb prostheses

3.2

upper limb prosthesis

device that replaces the whole or part of the upper limb after amputation (including non-surgical trauma or auto amputation), or, due to congenital limb deficiency

3.2.1

partial hand prosthesis

device that replaces part of the upper limb distal to the wrist joint

Note 1 to entry: Included are finger prosthesis.

3.2.2

wrist disarticulation prosthesis

device that replaces part of the upper limb at the wrist joint

3.2.3

transradial prosthesis

device that replaces part of the upper limb between the wrist and elbow joints
