## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents). ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 5, *Grinding wheels and abrasives*.

This second edition cancels and replaces the first edition (ISO 603-8:1999), which has been technically revised. It also incorporates the Corrigendum ISO 603-8:1999/Cor 1:1999.

The main changes are as follows:

- the Scope has been specified;
- [Clause 2](#) has been revised;
- [Clause 3](#) has been added;
- in [Clause 4](#) (former Clause 3), introductory, explanatory sentences have been added for better understanding;
- the values in [Table 1](#) have been adapted to the state of the art and for a more global acceptance, the most common dimensions for imperial sizes have also been included;
- former Clause 5 “Specifications” has been removed and the reference to ISO 13942 has been added in the Scope for information;
- the Bibliography has been revised.

A list of all parts in the ISO 603 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

# Bonded abrasive products — Dimensions —

## Part 8: Grinding wheels for deburring and fettling/snagging on stationary machine

### 1 Scope

This document specifies the nominal dimensions, in millimetres, of:

- shape type 1: straight grinding wheel.

These bonded abrasive products are intended to be used for deburring and fettling of any surface of a workpiece. The workpiece is manually guided, and the grinding wheel is fixed.

This document does not specify limit deviations and run-out tolerances, which are given in ISO 13942.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 525, *Bonded abrasive products — Shape types, designation and marking*
