Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this part of ISO 15489 may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 15489-1 was prepared by Technical Committee ISO/TC 46, *Information and documentation*, Subcommittee SC 11, *Archives/records management*.

ISO 15489 consists of the following parts, under the general title *Information and documentation — Records management*:

— *Part 1: General*

— *Part 2: Guidelines* [Technical Report]

Introduction

The standardization of records management policies and procedures ensures that appropriate attention and protection is given to all records, and that the evidence and information they contain can be retrieved more efficiently and effectively, using standard practices and procedures.

This part of ISO 15489 was developed in response to consensus among participating ISO member countries to standardize international best practice in records management using the Australian Standards AS 4390, *Records management* as its starting point.

This International Standard is accompanied by a Technical Report (ISO/TR 15489-2) that is recommended for use with it. ISO/TR 15489-2 provides further explanation and implementation options for achieving the outcomes of this International Standard. It also includes a bibliography.
