EESTI STANDARDI EESSÕNA**NATIONAL FOREWORD**

See Eesti standard EVS-ISO/IEC 27005:2014 „Infotehnoloogia. Turbemeetodid. Infoturvariski haldus“ sisaldab rahvusvahelise standardi ISO/IEC 27005:2011 „Information technology – Security techniques – Information security risk management“ identset ingliskeelset teksti. Ettepaneku rahvusvahelise standardi ümbertrüki meetodil ülevõtuks on esitanud EVS/TK 4, standardi avaldamist on korraldanud Eesti Standardikeskus. Standard EVS-ISO/IEC 27005:2014 on jõustunud sellekohase teate avaldamisega EVS Teataja 2014. aasta aprillikuu numbris. Standard on kättesaadav Eesti Standardikeskusest.	This Estonian Standard EVS-ISO/IEC 27005:2014 consists of the identical English text of the International Standard ISO/IEC 27005:2011 „Information technology – Security techniques – Information security risk management“. Proposal to adopt the International Standard by reprint method has been presented by EVS/TK 4, the Estonian standard has been published by the Estonian Centre for Standardisation. This standard has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation. The standard is available from the Estonian Centre for Standardization.

Käsitlusala

See standard annab suuniseid infoturvariski halduseks.

Standard toetab standardis ISO/IEC 27001 spetsifitseeritud üldkontseptsioone ja on kavandatud aitama infoturbe rahuldavat rakendamist riskihaldusliku lähenemisviisi alusel.

Selle standardi täielikuks mõistmiseks on tähtis tunda mõisteid, mudeleid, protsesse ja termineid, mida kirjeldavad ISO/IEC 27001 ja ISO/IEC 27002.

Standardit saab rakendada igat tüüpi organisatsioonidele (näiteks äriettevõtetele, riigiasutustele, mitte-tulunduslikele organisatsioonidele), kes kavatsevad hallata riske, mis võivad rikkuda organisatsiooni teabe turvalisust.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile standardiosakond@evs.ee.

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 27005 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 27, *IT Security techniques*.

This second edition cancels and replaces the first edition (ISO/IEC 27005:2008) which has been technically revised.

EVS

Introduction

This International Standard provides guidelines for information security risk management in an organization, supporting in particular the requirements of an information security management (ISMS) according to ISO/IEC 27001. However, this International Standard does not provide any specific method for information security risk management. It is up to the organization to define their approach to risk management, depending for example on the scope of the ISMS, context of risk management, or industry sector. A number of existing methodologies can be used under the framework described in this International Standard to implement the requirements of an ISMS.

This International Standard is relevant to managers and staff concerned with information security risk management within an organization and, where appropriate, external parties supporting such activities.

EVS

Information technology — Security techniques — Information security risk management

1 Scope

This International Standard provides guidelines for information security risk management.

This International Standard supports the general concepts specified in ISO/IEC 27001 and is designed to assist the satisfactory implementation of information security based on a risk management approach.

Knowledge of the concepts, models, processes and terminologies described in ISO/IEC 27001 and ISO/IEC 27002 is important for a complete understanding of this International Standard.

This International Standard is applicable to all types of organizations (e.g. commercial enterprises, government agencies, non-profit organizations) which intend to manage risks that could compromise the organization's information security.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 27000, *Information technology — Security techniques — Information security management systems — Overview and vocabulary*

ISO/IEC 27001:2005, *Information technology — Security techniques — Information security management systems — Requirements*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 27000 and the following apply.

NOTE Differences in definitions between ISO/IEC 27005:2008 and this International Standard are shown in Annex G.

3.1

consequence

outcome of an **event** (3.3) affecting objectives

[ISO Guide 73:2009]

NOTE 1 An event can lead to a range of consequences.

NOTE 2 A consequence can be certain or uncertain and in the context of information security is usually negative.

NOTE 3 Consequences can be expressed qualitatively or quantitatively.

NOTE 4 Initial consequences can escalate through knock-on effects.
