ICS 75.180.10

English Version

Petroleum and natural gas industries - Fixed steel offshore structures (ISO 19902:2007)

Industries du pétrole et du gaz naturel - Structures en mer fixes en acier (ISO 19902:2007)

Erdöl- und Erdgasindustrie - Gegründete Stahlplattformen (ISO 19902:2007)

This European Standard was approved by CEN on 3 November 2007.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

EUROPÄISCHES KOMITEE FÜR NORMUNG

Management Centre: rue de Stassart, 36 B-1050 Brussels

Foreword

This document (EN ISO 19902:2007) has been prepared by Technical Committee ISO/TC 67 "Materials, equipment and offshore structures for petroleum and natural gas industries" in collaboration with Technical Committee CEN/TC 12 "Materials, equipment and offshore structures for petroleum, petrochemical and natural gas industries" the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2008, and conflicting national standards shall be withdrawn at the latest by June 2008.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Endorsement notice

The text of ISO 19902:2007 has been approved by CEN as a EN ISO 19902:2007 without any modification.

Foreword.....	xi
Introduction.....	xiii
1 Scope.....	1
2 Normative references.....	1
3 Terms and definitions.....	2
4 Symbols.....	9
5 Abbreviated terms.....	13
6 Overall considerations.....	15
6.1 Types of fixed steel offshore structure.....	15
6.2 Planning.....	17
6.3 Service and operational considerations.....	17
6.4 Safety considerations.....	18
6.5 Environmental considerations.....	19
6.6 Exposure levels.....	20
6.7 Assessment of existing structures.....	22
6.8 Structure reuse.....	22
7 General design requirements.....	23
7.1 General.....	23
7.2 Incorporating limit states.....	23
7.3 Determining design situations.....	23
7.4 Structural modelling and analysis.....	24
7.5 Design for pre-service and removal situations.....	24
7.6 Design for the in-place situation.....	24
7.7 Determination of resistances.....	24
7.8 Strength and stability checks.....	25
7.9 Robustness.....	26
7.10 Reserve strength.....	26
7.11 Indirect actions.....	26
7.12 Structural reliability analysis.....	27
8 Actions for pre-service and removal situations.....	27
8.1 General.....	27
8.2 General requirements.....	28
8.3 Actions associated with lifting.....	30
8.4 Actions associated with fabrication.....	33
8.5 Actions associated with loadout.....	33
8.6 Actions associated with transportation.....	34
8.7 Actions associated with installation.....	35
8.8 Actions associated with removal.....	36
9 Actions for in-place situations.....	36
9.1 General.....	36
9.2 Permanent actions (G) and variable actions (Q).....	36
9.3 Extreme environmental action due to wind, waves and current.....	38
9.4 Extreme quasi-static action due to wind, waves and current (E_e).....	39
9.5 Extreme quasi-static action caused by waves only (E_{we}) or by waves and currents (E_{wce}).....	41
9.6 Actions caused by current.....	46
9.7 Actions caused by wind.....	47

9.8	Equivalent quasi-static action representing dynamic response caused by extreme wave conditions	48
9.9	Factored actions	50
9.10	Design situations	51
9.11	Local hydrodynamic actions	53
10	Accidental situations	54
10.1	General	54
10.2	Vessel collisions	58
10.3	Dropped objects	59
10.4	Fires and explosions	59
10.5	Abnormal environmental actions	59
11	Seismic design considerations	60
11.1	General	60
11.2	Seismic design procedure	60
11.3	Seismic reserve capacity factor	61
11.4	Recommendations for ductile design	61
11.5	ELE requirements	63
11.6	ALE requirements	64
11.7	Topsides appurtenances and equipment	66
12	Structural modelling and analysis	67
12.1	Purpose of analysis	67
12.2	Analysis principles	68
12.3	Modelling	68
12.4	Analysis requirements	75
12.5	Types of analysis	81
12.6	Non-linear analysis	83
13	Strength of tubular members	86
13.1	General	86
13.2	Tubular members subjected to tension, compression, bending, shear or hydrostatic pressure	87
13.3	Tubular members subjected to combined forces without hydrostatic pressure	94
13.4	Tubular members subjected to combined forces with hydrostatic pressure	96
13.5	Effective lengths and moment reduction factors	99
13.6	Conical transitions	101
13.7	Dented tubular members	111
13.8	Corroded tubular members	118
13.9	Grouted tubular members	118
14	Strength of tubular joints	123
14.1	General	123
14.2	Design considerations	124
14.3	Simple circular tubular joints	132
14.4	Overlapping circular tubular joints	138
14.5	Grouted circular tubular joints	139
14.6	Ring stiffened circular tubular joints	139
14.7	Other circular joint types	139
14.8	Damaged joints	139
14.9	Noncircular joints	140
14.10	Cast joints	140
15	Strength and fatigue resistance of other structural components	140
15.1	Grouted connections	140
15.2	Mechanical connections	147
15.3	Clamps for strengthening and repair	151
16	Fatigue	155
16.1	General	155
16.2	General requirements	156
16.3	Description of the long-term wave environment	159

16.4	Performing the global stress analyses.....	161
16.5	Characterization of the stress range data governing fatigue.....	164
16.6	The long-term local stress range history	165
16.7	Determining the long-term stress range distribution by spectral analysis	167
16.8	Determining the long-term stress range distribution by deterministic analysis	171
16.9	Determining the long-term stress range distribution by approximate methods.....	171
16.10	Geometrical stress ranges.....	172
16.11	Fatigue resistance of the material.....	174
16.12	Fatigue assessment.....	176
16.13	Other causes of fatigue damage than wave action	177
16.14	Further design considerations	178
16.15	Fracture mechanics methods.....	180
16.16	Fatigue performance improvement of existing components.....	181
17	Foundation design.....	182
17.1	General.....	182
17.2	Pile foundations	183
17.3	General requirements for pile design	184
17.4	Pile capacity for axial compression.....	185
17.5	Pile capacity for axial tension	190
17.6	Axial pile performance	190
17.7	Soil reaction for piles under axial compression.....	191
17.8	Soil reaction for piles under lateral actions	194
17.9	Pile group behaviour	198
17.10	Pile wall thickness	199
17.11	Length of pile sections.....	201
17.12	Shallow foundations.....	202
18	Corrosion control.....	203
18.1	General.....	203
18.2	Corrosion zones and environmental parameters affecting corrosivity	203
18.3	Forms of corrosion, associated corrosion rates and corrosion damage	204
18.4	Design of corrosion control.....	204
18.5	Fabrication and installation of corrosion control.....	209
18.6	In-service inspection, monitoring and maintenance of corrosion control	210
19	Materials	211
19.1	General.....	211
19.2	Design philosophy.....	212
19.3	Strength groups	214
19.4	Toughness classes.....	214
19.5	Applicable steels.....	215
19.6	Cement grout for pile-to-sleeve connections and grouted repairs.	216
20	Welding, fabrication and weld inspection.....	217
20.1	General.....	217
20.2	Welding	218
20.3	Inspection	224
20.4	Fabrication.....	225
21	Quality control, quality assurance and documentation.....	228
21.1	General.....	228
21.2	Quality management system	228
21.3	Quality control plan	229
21.4	Inspection of installation aids and appurtenances	230
21.5	Inspection of loadout, sea-fastening and transportation	231
21.6	Installation inspection	231
21.7	Documentation	232
21.8	Drawings and specifications	234
22	Loadout, transportation and installation.....	234
22.1	General.....	234
22.2	Loadout and transportation.....	235

22.3	Transfer of the structure from the transport barge into the water.....	237
22.4	Placement on the sea floor and assembly of the structure.....	238
22.5	Pile installation.....	240
22.6	Installation of conductors.....	245
22.7	Topsides installation.....	246
22.8	Grounding of installation welding equipment.....	247
23	In-service inspection and structural integrity management.....	247
23.1	General.....	247
23.2	Data collection and update.....	249
23.3	Evaluation.....	249
23.4	Inspection strategy.....	251
23.5	Inspection programme.....	253
23.6	Inspection requirements.....	253
23.7	Default periodic inspection requirements.....	256
23.8	Personnel qualifications.....	258
24	Assessment of existing structures.....	259
24.1	General.....	259
24.2	Assessment process.....	259
24.3	Data collection.....	262
24.4	Structural assessment initiators.....	263
24.5	Acceptance criteria.....	264
24.6	Structure condition assessment.....	265
24.7	Actions assessment.....	265
24.8	Screening assessment.....	266
24.9	Resistance assessment.....	266
24.10	Prevention and mitigation.....	269
25	Structure reuse.....	269
25.1	General.....	269
25.2	Fatigue considerations for reused structures.....	269
25.3	Steel in reused structures.....	269
25.4	Inspection of structures to be reused.....	270
25.5	Removal and reinstallation.....	271
25.6	In-service inspection and structural integrity management.....	271

D.3	Welding and non-destructive inspection categories	565

Annex E (informative) Welding and weld inspection requirements — Material category approach	568
E.1 General	568
E.2 Weld toughness	568
E.2.1 Weld metal toughness	568
E.2.2 HAZ toughness	568
E.3 Inspection	570
Annex F (informative) Welding and weld inspection requirements — Design class approach	573
F.1 General	573
F.2 Toughness of weld and heat affected zone (HAZ)	573
F.2.1 General	573
F.2.2 CTOD testing	573
F.2.3 PWHT alternative to CTOD testing	573
F.3 Extent of NDT for structural welds	573
Annex G (normative) Fabrication tolerances	576
G.1 Measurements	576
G.2 Launch rails	576
G.3 Global horizontal tolerances	576
G.4 Global vertical tolerances	578
G.5 Roundness of tubular members	579
G.6 Circumference of tubular members	579
G.7 Straightness and circumferential weld locations of tubular members	579
G.8 Joint mismatch for tubular members	582
G.9 Leg alignment and straightness tolerances	584
G.10 Tubular joint tolerances	585
G.11 Cruciform joints	587
G.12 Stiffener tolerances	588
G.12.1 Stiffener location	588
G.12.2 Stiffener cross-section	588
G.13 Conductor, pile guide, pile sleeve and appurtenance support tolerances	590
Annex H (informative) Regional information	592
H.1 General	592
H.2 North West Europe	592
H.2.1 Description of region	592
H.2.2 Regulatory framework in NW Europe	592
H.2.3 Technical information for NW Europe	593
H.3 Canada	593
H.3.1 Description of region	593
H.3.2 Regulatory framework in Canada	593
H.3.3 Technical information for Canada	594
H.3.4 Additional information and guidance for Canada	595
Bibliography	597

Introduction

The series of International Standards applicable to types of offshore structure, ISO 19900 to ISO 19906, constitutes a common basis covering those aspects that address design requirements and assessments of all offshore structures used by the petroleum and natural gas industries worldwide. Through their application, the intention is to achieve reliability levels appropriate for manned and unmanned offshore structures, whatever the type of structure and the nature or combination of the materials used.

It is important to recognize that structural integrity is an overall concept comprising models for describing actions, structural analyses, design rules, safety elements, workmanship, quality control procedures and national requirements, all of which are mutually dependent. The modification of one aspect of design in isolation can disturb the balance of reliability inherent in the overall concept or structural system. The implications involved in modifications, therefore, need to be considered in relation to the overall reliability of all offshore structural systems.

The series of International Standards applicable to the various types of offshore structure is intended to provide wide latitude in the choice of structural configurations, materials and techniques without hindering innovation. Sound engineering judgment is therefore necessary in the use of these International Standards.

Annex A provides background to and guidance on the use of this document and needs to be read in conjunction with the main body of this document. The clause numbering in Annex A is the same as in the normative text to facilitate cross-referencing.

Materials, welding and weld inspection requirements can be based either on a "material category" or on a "design class" approach, as discussed in Clauses 19 and 20. If the material category approach is used, the corresponding provisions of Annexes C and E are normative; if the design class approach is used, the corresponding provisions of Annexes D and F are normative.

Annex G gives requirements on fabrication tolerances.

Regional information on the application of the document to certain specific offshore areas is provided in informative Annex H.

To meet certain needs of industry for linking software to specific elements in this International Standard, a special numbering system has been permitted for figures, tables, equations and bibliographic references.

Petroleum and natural gas industries — Fixed steel offshore structures

1 Scope

This International Standard specifies requirements and provides recommendations applicable to the following types of fixed steel offshore structures for the petroleum and natural gas industries:

- caissons, free-standing and braced;
- jackets;
- monotowers;
- towers.

In addition, it is applicable to compliant bottom founded structures, steel gravity structures, jack-ups, other bottom founded structures and other structures related to offshore structures (such as underwater oil storage tanks, bridges and connecting structures), to the extent to which its requirements are relevant.

This International Standard contains requirements for planning and engineering of the following tasks:

- a) design, fabrication, transportation and installation of new structures as well as their future removal;
- b) in-service inspection and integrity management of both new and existing structures;
- c) assessment of existing structures;
- d) evaluation of structures for reuse at different locations.

NOTE 1 Specific additional requirements for the design of fixed steel offshore structures in arctic environments are to be contained in ISO 19906^[1].

NOTE 2 Requirements for topsides structures are to be contained in ISO 19901-3^[2], for marine operations in ISO 19901-6^[3] and for the site-specific assessment of jack-ups in ISO 19905-1^[4].

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 10414-1, *Petroleum and natural gas industries — Field testing of drilling fluids — Part 1: Water-based fluids*

ISO 12135, *Metallic materials — Unified method of test for the determination of quasistatic fracture toughness*

ISO 13702, *Petroleum and natural gas industries — Control and mitigation of fires and explosions on offshore production installations — Requirements and guidelines*

ISO 19900:2002, *Petroleum and natural gas industries — General requirements for offshore structures*

ISO 19901-1:2005, *Petroleum and natural gas industries — Specific requirements for offshore structures — Part 1: Metocean design and operating considerations*

ISO 19901-2, *Petroleum and natural gas industries — Specific requirements for offshore structures — Part 2: Seismic design procedures and criteria*

ISO 19901-4, *Petroleum and natural gas industries — Specific requirements for offshore structures — Part 4: Geotechnical and foundation design considerations*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 19900, ISO 19901-1, ISO 19901-2 and ISO 19901-4, and the following apply.

3.1 abnormal value

value of a parameter of abnormal severity used in accidental limit state checks in which a structure should not suffer complete loss of integrity

NOTE 1 Abnormal design situations are used to provide robustness against events with a probability of exceedance of typically between 10^{-3} and 10^{-4} per annum by avoiding, for example, gross overloading.

NOTE 2 Abnormal values and events have probabilities of exceedance of the order of 10^{-3} to 10^{-4} per annum. In the limit state checks, some or all of the partial factors are set to 1,0.

NOTE 3 Adapted from ISO 19901-1:2005, definition 3.1.

3.2 accidental design situation

design situation involving exceptional conditions of the structure or its exposure

EXAMPLE Impact, fire, explosion, local failure, loss of intended differential pressure (e.g. buoyancy).

3.3 after damage design situation

design situation for which the condition of the structure reflects damage due to an accidental design situation and for which the environmental conditions are specially defined

3.4 analysis type

method including governing equations for deriving action effects

EXAMPLE Static analysis, transient dynamic analysis, non-linear analysis.

3.5 basic variable

one of a specified set of variables representing physical quantities which characterize actions, environmental influences, geometrical quantities, or material properties including soil properties

[ISO 19900:2002]

3.6 boundary conditions

actions and constraints on a [section of a] structural component [or a group of structural components] by other structural components or by the environment surrounding it

NOTE Boundary conditions can be used to generate reaction forces at locations of restraint.
