Plastics and rubber machines - Thermoforming machines - Safety requirements

Machines pour les matières plastiques et le caoutchouc -
Machines de thermoformage - Prescriptions de sécurité

Kunststoff- und Gummimaschinen - Warmformmaschinen -
Sicherheitsanforderungen

This European Standard was approved by CEN on 24 August 2008 and includes Amendment 1 approved by CEN on 29 August 2011.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 12409:2008+A1:2011) has been prepared by Technical Committee CEN/TC 145 "Plastics and rubber machines", the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2012, and conflicting national standards shall be withdrawn at the latest by April 2012.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document includes Amendment 1, approved by CEN on 2011-08-29.

The start and finish of text introduced or altered by amendment is indicated in the text by tags **[A1]** **[A1]**.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EC Directive(s).

[A1] For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document. **[A1]**

This document supersedes **[A1]** EN 12409:2008 **[A1]**.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Introduction

This document is a type C standard as stated in EN ISO 12100.

The machinery concerned and the extent to which hazards, hazardous situations and events are covered are indicated in the scope of this document.

When provisions of this type C standard are different from those which are stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards, for machines that have been designed and built according to the provisions of this type C standard.

1 Scope

This European Standard deals with all significant hazards, hazardous situations and events relevant to thermoforming machines for continuous sheet and single sheets of thermoplastics materials, when they are used as intended and under conditions of misuse which are foreseeable by the manufacturer (see Clause 4).

A thermoforming machine may consist of a forming unit or a forming unit linked to one or more additional units. This standard covers the following units:

- continuous sheet unwind unit;
- single sheet feed unit;
- material intake;
- conveying equipment;
- heating unit;
- preheating unit;
- edge heating unit;
- component feeding/inserting unit;
- forming station;
- finishing station;
- stacking station;
- discharge station;
- residual sheet winding unit;
- sheet cutting unit.

This European standard does not apply to units mounted upstream or downstream of the thermoforming machine:

- which have a separate control system; and/or
- are located separately.

NOTE 1 This European Standard specifies requirements for machines supplied as a single forming unit or a number of units designed to operate as a single machine. Additional units that may be introduced at a later stage should be considered separately applying relevant standards and taking into account any hazards arising through their interaction with the thermoforming machine.

This European Standard does not apply to units which are integrated into form, fill and seal machines. These are covered in EN 415-3:1999.

This European standard does not apply to units which incorporate heating systems which are fuelled by gas.

NOTE 2 Thermoforming machines generally do not create explosive atmospheres. In principle they therefore correspond with line F of Table 2 of the ATEX Guideline and consequently do not fall within the scope of Directive 94/9/EC.

This European Standard is not applicable to thermoforming machines which are manufactured before the date of its publication as EN.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN ISO 12100-1:2003 and the following apply.

3.1
thermoforming machine
machine which renders thermoplastic sheet material formable, by heating, and deforms it either by using vacuum or compressed air with or without the use of a stretching aid, for example, a stretching punch

3.2
continuous sheet unwind unit
unit where a continuous sheet roll is clamped and unwound as required by the manufacturing process

3.3
sheet roll
continuous sheet wound on a core with or without an integral shaft
