The performance and safety values cover shock absorption, anti-slip characteristics of the base and top friction characteristics of the surface.

NOTE For the specific requirements of international official competitions, see appropriate international regulations.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1
shock absorption
ability of the mat to reduce impact forces on the athlete, expressed as a maximum deceleration under defined test conditions

3.2
deflection
ability of the mat to deform to an impact whilst maintaining the athletes stability, expressed as maximum deflection under defined test conditions

3.3
resilience
ability of the mat to return energy after an impact, expressed as resilience in percent under defined test conditions

3.4
surface
upper side of the mat on which the athlete moves

3.5
base
under side of the mat designed to be in contact with the floor during use
