

EESTI STANDARD

EVS-EN 12699:2001

Execution of special geotechnical work - Displacement piles

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

Käesolev Eesti standard EVS-EN 12699:2001 sisaldb Euroopa standardi EN 12699:2000 ingliskeelset teksti. Standard on kinnitatud Eesti Standardikeskuse 18.05.2001 käskkirjaga ja jõustub sellekohase teate avaldamisel EVS Teatajas. Standard on kätesaadav Eesti standardiorganisatsioonist.	This Estonian standard EVS-EN 12699:2001 consists of the English text of the European standard EN 12699:2000. This standard is ratified with the order of Estonian Centre for Standardisation dated 18.05.2001 and is endorsed with the notification published in the official bulletin of the Estonian national standardisation organisation. The standard is available from Estonian standardisation organisation.

**EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM**

EN 12699

December 2000

ICS 93.020

English version

**Execution of special geotechnical work
Displacement piles**

Exécution des travaux géotechniques spéciaux – Pileux avec refoulement de sol

Ausführung spezieller geotechnischer Arbeiten (Spezialtiefbau) – Verdrängungspfähle

This European Standard was approved by CEN on 2000-11-24.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, the Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and the United Kingdom.

Foreword

This European Standard has been prepared by Technical Committee CEN/TC 288 "Execution of special geotechnical works", the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2001, and conflicting national standards shall be withdrawn at the latest by June 2001.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

This Standard has been prepared by the Working Group (WG 5) of the Technical committee of the Execution of Special Geotechnical Works (TC 288) of the European Committee for Standardisation (CEN). The general remit of TC 288 is the standardisation of the execution procedures for geotechnical works (including testing and control methods) and of the required material properties. WG 5 has been working with the subject area of displacement piles.

The document has been prepared to stand alongside ENV 1997 *Eurocode 7 Part 1: Geotechnical Design, General Rules*. Clause 7 of this Standard covers design aspects of piles.

This document has been drafted by a working group comprised of experts from 14 countries and is based on review of 12 national and international codes of practice.

The annexes A und B are informative.

This document is a preview generated by EVS

1 Scope

1.1 This standard establishes general principles for the execution of displacement piles, that means piles which are installed in the ground without excavation or removal of material from the ground except for limiting heave, vibration, removal of obstructions or to assist penetration.

Piles are driven into the ground using impact, vibration, pressing, screwing or a combination of these methods.

1.2 The material of displacement piles covered by this standard can be :

- steel ;
- cast iron ;
- concrete, mortar ;
- timber ;
- grout ;
- combination of above.

1.3 This standard covers prefabricated, cast in place, or a combination of these methods to form displacement piles of regular shape.

Examples are given in Figures A.2 and A.3 in annex A.

1.4 This standard is limited to piles with a diameter or maximum cross sectional dimension greater than 150 mm.

1.5 Other than practical considerations there are for the purpose of this Standard no limitations regarding shaft or base enlargements, length or rake.

1.6 The provisions of the standard apply to :

- single piles ;
- pile groups ;
- walls formed by concrete sheet piles.

1.7 Columns constructed by ground improvement techniques (such as mixed in place columns, jet grouting, compaction grouting, vibro flotation, stone columns are not covered by this standard. Bored piles are covered in EN 1536. Steel and timber sheet piles walls are covered in EN 12063. Micropiles are covered in (WI 00288010)¹⁾.

¹⁾ A standard on micropiles is under preparation.

2 Normative references

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

3 Terms and definitions

For the purposes of this European Standard, the following terms and definitions apply:

3.1

displacement pile

pile which is installed in the ground without excavation or removal of material from the ground except for limiting heave, vibration, removal of obstructions or to assist penetration
