**Lubiväetised. Magneesiumisisalduse määramine.
Aatomabsorptsiooni spektromeetriline meetod**

Liming materials - Determination of magnesium content -
Atomic absorption spectrometric method

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

Käesolev Eesti standard EVS-EN 12947:2000 sisaldb Euroopa standardi EN 12947:2000 ingliskeelset teksti. Standard on kinnitatud Eesti Standardikeskuse 15.11.2000 käskkirjaga ja jõustub sellekohase teate avaldamisel EVS Teatajas. Euroopa standardimisorganisatsioonide poolt rahvuslikele liikmetele Euroopa standardi teksti kätesaadavaks tegemise kuupäev on 21.06.2000. Standard on kätesaadav Eesti standardiorganisatsionist.	This Estonian standard EVS-EN 12947:2000 consists of the English text of the European standard EN 12947:2000. This standard is ratified with the order of Estonian Centre for Standardisation dated 15.11.2000 and is endorsed with the notification published in the official bulletin of the Estonian national standardisation organisation. Date of Availability of the European standard text 21.06.2000. The standard is available from Estonian standardisation organisation.

English version

Liming materials

Determination of magnesium content – Atomic absorption spectrometric method

Amendements calciques et/ou magnésiens – Détermination de la teneur en magnésium – Méthode par spectrométrie d'absorption atomique

Calcium-/Magnesium-Bodenverbesserungsmittel – Bestimmung des Magnesiumgehaltes – Atomabsorptionsspektrometrisches Verfahren

This European Standard was approved by CEN on 1999-11-13.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, the Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and the United Kingdom.

Foreword

This European Standard has been prepared by Technical Committee CEN/TC 260 "Fertilizers and liming materials", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2000, and conflicting national standards shall be withdrawn at the latest by December 2000.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

1 Scope

This draft European Standard specifies a method for the determination of the magnesium content of all liming materials by atomic absorption spectrometry.

2 Normative references

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text, and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

EN 1482, *Sampling of solid fertilisers and liming materials*

ISO 3310-1, *Test sieves - Technical requirement and testing part 1: Test sieves of metal wire cloth*

3 Principle

Dissolution of the test portion in diluted hydrochloric acid. Filtration and dilution. Determination of magnesium by flame atomic absorption spectrometry at a wavelength of 285,2 nm.

4 Reagents

4.1 General

Commercially available standard solutions may be used instead of standard solutions produced on-site in the laboratory.

4.2 Hydrochloric acid solution, diluted

Dilute 500 ml of concentrated hydrochloric acid ($\rho_{20} = 1,18 \text{ g/ml}$) to 1 000 ml with water.

4.3 Hydrochloric acid solution

Approximately $c(\text{HCl}) \approx 1 \text{ mol/l}$

4.4 Hydrochloric acid solution

Approximately $c(\text{HCl}) \approx 0,5 \text{ mol/l}$

4.5 Standard magnesium solution

Containing 1,000 g of magnesium per litre.

4.5.1 Weigh 1,013 g of magnesium sulfate ($\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$) into a 100 ml volumetric flask, dissolve in hydrochloric acid solution (4.4) and dilute to the mark with the same solution.

or

4.5.2 Heat magnesium oxide (MgO) at 600 °C for 2 h. Weigh 1,658 g of the freshly calcined MgO into a 500 ml beaker, dissolve in 100 ml of water and 120 ml of hydrochloric acid solution (4.3). Transfer quantitatively the solution to a 1 000 ml volumetric flask, dilute to the mark with water and mix thoroughly.
