

**Masinad ja jaamad lehtklaasi valmistamiseks ja
töötlemiseks. Ohutusnõuded. Osa 6: Praagi
väljalõikamismasinad**

Machines and plants for the manufacture, treatment and
processing of flat glass - Safety requirements - Part 6:
Machines for break-out

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

Käesolev Eesti standard EVS-EN 13035-6:2006+A1:2010 sisaldab Euroopa standardi EN 13035-6:2006+A1:2009 ingliskeelset teksti.

Standard on kinnitatud Eesti Standardikeskuse 28.02.2010 käskkirjaga ja jõustub sellekohase teate avaldamisel EVS Teatajas.

Euroopa standardimisorganisatsioonide poolt rahvuslikele liikmetele Euroopa standardi teksti kättesaadavaks tegemise kuupäev on 16.12.2009.

Standard on kättesaadav Eesti standardiorganisatsioonist.

This Estonian standard EVS-EN 13035-6:2006+A1:2010 consists of the English text of the European standard EN 13035-6:2006+A1:2009.

This standard is ratified with the order of Estonian Centre for Standardisation dated 28.02.2010 and is endorsed with the notification published in the official bulletin of the Estonian national standardisation organisation.

Date of Availability of the European standard text 16.12.2009.

The standard is available from Estonian standardisation organisation.

English Version

**Machines and plants for the manufacture, treatment and
processing of flat glass - Safety requirements - Part 6: Machines
for break-out**

Machines et installations pour la production, le façonnage
et la transformation du verre plat - Exigences de sécurité -
Partie 6: Machines à rompre

Maschinen und Anlagen für die Herstellung, Be- und
Verarbeitung von Flachglas - Sicherheitsanforderungen -
Teil 6: Brechmaschinen

This European Standard was approved by CEN on 24 May 2006 and includes Amendment 1 approved by CEN on 8 November 2009.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 13035-6:2006+A1:2009) has been prepared by Technical Committee CEN/TC 151 “Construction equipment and building material machines — Safety”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2010, and conflicting national standards shall be withdrawn at the latest by June 2010.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document includes Amendment 1, approved by CEN on 2009-11-08.

This document supersedes EN 13035-6:2006.

The start and finish of text introduced or altered by amendment is indicated in the text by tags **A1** and **A1**.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association and supports essential requirements of EU Directive(s).

A1 For relationship with EU Directive(s), see informative Annexes ZA and ZB, which are integral parts of this document. **A1**

It is one of a series concerning machinery for the manufacture, treatment and processing of flat glass (see Bibliography).

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Introduction

This European Standard is a type C standard as stated in EN ISO 12100-1.

The machinery concerned and the extent to which hazards, hazardous situations and events are covered are indicated in the scope of this European Standard.

When provisions of this type C standard are different from those stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards for machines that have been designed and built according to the provisions of this type C standard.

When compiling this European Standard it was assumed that:

- machines for break-out used in shops for the treatment of flat glass are compact and can be overlooked from the working place of the operator; but sometimes extended plants with remote parts are usual preferably in factories for the production of flat glass without the possibility of a survey from any position;
- transport, break-out of flat glass on the machinery generate no hazards by noise, but feeding waste glass into bins manually may make dangerous noise, when the glass is not placed with care but thrown off. Dangerous noise may also be generated by crushing waste glass or feeding waste glass into containers by conveyors near to the operator's working place so that wearing of ear plugs may be necessary;
- negotiations occur between the manufacturer and the user about measures to avoid dangerous noise at the operator's position by other sources, e.g. by separation and/or insulation of noisy operations, such as charging of waste glass into containers or crushing of waste glass;
- gas burners for naked flames used to induce stress to glass present no other significant hazards than burns by the flame, because burners have very low capacity, are used in big halls and are always in the operator's view so that automatic surveillance of the flame or specific ducts for exhaust are not usual and necessary;
- as far as applicable obstructions by the structure of guards during servicing work such as fault clearing are prevented by a minimum distance of 0,5 m between the guard and the machinery;
- the existing ad-hoc standards for components are applied, e.g. EN 619, EN 13035-3, EN 13035-5, when conveyors, cutting operations or unloading equipment are integrated.

1 Scope

1.1 This European Standard applies for machines for break-out of flat glass including the following steps: transport and positioning, break-out, transport of the cut sizes to the unloading position, leading away of waste flat glass.

1.2 A1 This European Standard deals with the significant hazards, hazardous situations and events relevant to machines for the break-out of flat glass when they are used as intended and under the conditions of misuse which are reasonably foreseeable by the manufacturer (see Clause 4). A1 Those hazards which are dealt with in EN 619 for conveyors are excepted. A1 This European Standard specifies the appropriate technical measures to eliminate or reduce risks arising from the significant hazards during commissioning, operation and maintenance. A1 Hazards from noise are not considered to be significant.

1.3 This European Standard is not applicable to the break-out operation (opening the cut) of cutting machines for laminated glass (see EN 13035-7).

1.4 This European Standard is not applicable to the treatment of waste flat glass such as crushing and/or charging of waste flat glass into bins, containers.

1.5 This European Standard does not apply to the significant hazards of conveyors. If there are specific hazards which arise by the co-operation of conveyors with machines for break-out of flat glass, appropriate measures are specified.

1.6 This European Standard is not applicable to machines for break-out of flat glass which are manufactured before the date of publication of this European Standard by CEN.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN ISO 12100-1:2003 and the following apply.

3.1

break-out

method to open a cut (score) by generating strain e.g. by mechanical devices, by local heating with gas burners
