**Machines and plants for the manufacture, treatment and
processing of flat glass - Safety requirements - Part 7: Cutting
machines for laminated glass**

Machines et installations pour la production, le façonnage
et la transformation du verre plat - Exigences de sécurité -
Partie 7: Machines à couper le verre feuilleté

Maschinen und Anlagen zur Herstellung, Be- und
Verarbeitung von Flachglas - Sicherheitsanforderungen -
Teil 7: Schneidmaschinen für Verbundglas

This European Standard was approved by CEN on 24 May 2006 and includes Amendment 1 approved by CEN on 24 October 2009.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 13035-7:2006+A1:2009) has been prepared by Technical Committee CEN/TC 151 “Construction equipment and building material machines — Safety”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2010, and conflicting national standards shall be withdrawn at the latest by June 2010.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document includes Amendment 1, approved by CEN on 2009-10-24.

This document supersedes EN 13035-7:2006.

The start and finish of text introduced or altered by amendment is indicated in the text by tags **A1** **A1**.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association and supports essential requirements of EU Directive(s).

A1 For relationship with EU Directive(s), see informative Annexes ZA and ZB, which are integral parts of this document. **A1**

It is one of a series concerning machinery for the treatment and processing of flat glass (see Bibliography).

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Introduction

This European Standard is a type C standard as stated in EN ISO 12100-1.

The machinery concerned and the extent to which hazards, hazardous situations and events are covered are indicated in the scope of this European Standard.

When provisions of this type C standard are different from those stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards for machines that have been designed and built according to the provisions of this type C standard.

The processing steps at machines for cutting laminated glass as a whole are slower than those at machines for cutting monolithic flat glass. Whereas the positioning, cutting and separating process with modern machines proceeds all-automatically, the loading and unloading of the glass is mainly performed by hand so that operational access is usual, and generally there is no link with other machinery.

For possible tiltable parts, reference to the ad-hoc standard EN 13035-4 can be made. The considerable hazards by the fast-moving cutting bridges at machines for cutting monolithic glass do not exist with machines for cutting laminated glass having static cutting bridges only for x-cuts.

When compiling this European Standard, it was assumed that the existing ad-hoc standards for components are applied, e.g. EN 619, when conveyors are integrated.

1 Scope

1.1 This European Standard applies for cutting machines for laminated glass including the following steps: transport and positioning, synchronous cutting (scoring) from both sides, break-out, electrical heating and separation.

1.2 A1 This European Standard deals with the significant hazards, hazardous situations and events relevant to cutting machines for laminated glass when they are used as intended and under the conditions of mis-use which are reasonably foreseeable by the manufacturer (see Clause 4). A1 Those hazards, which are dealt with in the ad-hoc standard EN 619 for conveyors are excepted. A1 This European Standard specifies the appropriate technical measures to eliminate or reduce risks arising from the significant hazards during commissioning, operation and maintenance. A1 Hazards from noise are not considered to be significant.

1.3 This European Standard is not applicable to cutting (scoring) and break-out of monolithic glass (see EN 13035-3 and EN 13035-6).

1.4 This European Standard is not applicable to the cutting of laminated glass by sawing or by the use of high-pressure liquid.

1.5 This European Standard is not applicable to the significant hazards of conveyors and machines for the manufacture, treatment and processing of flat glass such as tilting tables.

1.6 This European Standard is not applicable to cutting machines for laminated glass which are manufactured before the date of publication of this European Standard by CEN.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN ISO 12100-1:2003 and the following apply:

3.1

laminated (glass)

(flat) glass composed of layers of flat glass joined together by plastic layers

3.2

break-out

method to open a cut (score) by generating strain, e.g. by mechanical devices

3.3

carriage

mounting assembly for moving the cutting heads with the cutting tools in the axis of the (fixed) cutting bridge
