About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in 14 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

More than 55 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

5.8.13 CIM_SystemDevice (System to SCSIProtocolController)	59
6 Block Services Package	61
6.1 Description	61
6.1.1 General.....	61
6.1.2 Storage Capacity States.....	61
6.1.3 StoragePools	62
6.1.4 Blocks, Metadata, and Capacity Reported	62
6.1.5 StoragePool Management Instance Diagram.....	63
6.1.6 StoragePool, StorageVolume and LogicalDisk Manipulation	63
6.1.7 Declaring Storage Configuration Options	66
6.1.8 StorageVolume Creation Instance Diagram	70
6.1.9 Backward Compatibility	70
6.1.10 Capacity Management.....	71
6.1.11 Mapping of RAID levels to Data Redundancy and Package Redundancy	73
6.1.12 Storage Setting Associations to Storage Capabilities	74
6.1.13 The Usage Property	74
6.1.14 Read-Only Model Requirements	75
6.1.15 StorageExtent Conservation.....	76
6.1.16 Formulas For Calculating Capacity	80

6.1.17	Storage Element Manipulation	81
6.1.18	Block Services Predefined Indications	82
6.2	Health and Fault Management Considerations	84
6.3	Cascading Considerations	84
6.4	Supported Profile, Subprofiles and Packages	84
6.5	Methods of this Profile	84
6.5.1	Extrinsic Methods on StorageCapabilities	84
6.5.2	Intrinsic Methods on StorageSetting	87
6.5.3	Extrinsic Methods on StorageConfiguration	87
6.5.4	Extrinsic Methods on StoragePool	93
6.6	Client Considerations and Recipes	99
6.6.1	Representative Instance Diagram	99
6.6.2	Goals and Settings	99
6.6.3	Representative StoragePool Creation Example	100
6.6.4	Representative example of StorageVolume or LogicalDisk Creation	102
6.6.5	Summarize the StoragePools in a block storage system and verify the capacity reported	105
6.6.6	Conditional: Create StoragePool and Storage Element on Block Server (e.g., Array or Volume Manager)	106
6.6.7	Conditional: Expand Storage Element on Block Server	114
6.6.8	Conditional: Create Storage Element from Elements on Block Server	119
6.6.9	Optional: Intentionally General a CIM Error	125
6.7	Registered Name and Version	126
6.8	CIM Elements	126
6.8.1	General	126
6.8.2	CIM_AllocatedFromStoragePool (Pool from Pool)	132
6.8.3	CIM_AllocatedFromStoragePool (Volume or LogicalDisk from Pool)	132
6.8.4	CIM_ElementCapabilities (EnabledLogicalElementCapabilities to StorageVolume or LogicalDisk)	133
6.8.5	CIM_ElementCapabilities (EnabledLogicalElementCapabilities to StoragePool)	133
6.8.6	CIM_ElementCapabilities (StorageCapabilities to StorageConfigurationService)	133
6.8.7	CIM_ElementCapabilities (StorageCapabilities to StoragePool)	134
6.8.8	CIM_ElementCapabilities (StorageConfigurationCapabilities to StorageConfigurationService)	134
6.8.9	CIM_ElementCapabilities (StorageConfigurationCapabilities to concrete StoragePool)	134
6.8.10	CIM_ElementCapabilities (StorageConfigurationCapabilities to primordial StoragePool)	135
6.8.11	CIM_ElementCapabilities (Used to declare the naming capabilities of the StoragePool)	135
6.8.12	CIM_ElementCapabilities (Used to declare the naming capabilities of the StorageVolume or LogicalDisk)	136
6.8.13	CIM_ElementSettingData	136
6.8.14	CIM_EnabledLogicalElementCapabilities (For StorageConfigurationService)	136
6.8.15	CIM_EnabledLogicalElementCapabilities (For StoragePool)	137
6.8.16	CIM_FilterCollection (Block Services Predefined FilterCollection)	138
6.8.17	CIM_HostedCollection (System to predefined IndicationFilters)	138
6.8.18	CIM_HostedService	138
6.8.19	CIM_HostedStoragePool	139
6.8.20	CIM_IndicationFilter (Logical Disk Creation)	139

INFORMATION TECHNOLOGY – STORAGE MANAGEMENT – Part 4: Block devices

FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.
- 3) IEC, ISO and ISO/IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC Publication or any other IEC, ISO or ISO/IEC publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC Publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 24775-4 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

This International Standard, together with ISO/IEC 24775-1 to ISO/IEC 24775-3 and ISO/IEC 24775-5 to ISO/IEC 24775-8, replaces ISO/IEC 24775, second edition, published in 2011, and constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) reorganization into eight parts;
- b) maturity identification using stages; and
- c) new profiles.

The list of all currently available parts of the ISO/IEC 24775 series, under the general title *Information technology – Storage management*, can be found on the IEC web site.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.

Introduction

The Block Devices part of the series of International Standards, *Information technology – Storage management*, contains the profiles for devices that serve block storage. These devices include RAID arrays, Storage Virtualizers, host volume managers, and disk drives. This part also contains supporting profiles, such as the Block Services package.

Parts of this Standard

This International Standard is subdivided into the following parts:

- *Information technology – Storage management – Part 1: Overview*
- *Information technology – Storage management – Part 2: Common architecture*
- *Information technology – Storage management – Part 3: Common profiles*
- *Information technology – Storage management – Part 4: Block devices*
- *Information technology – Storage management – Part 5: Filesystems*
- *Information technology – Storage management – Part 6: Fabric*
- *Information technology – Storage management – Part 7: Host elements*
- *Information technology – Storage management – Part 8: Media libraries*

Changes since the Last Edition

This third edition cancels and replaces the second edition published in 2011 and constitutes a technical revision. This edition includes the following significant changes with respect to the previous edition. The changes fall into three broad categories:

- **Improved organization.** The International Standard has been reorganized into eight parts to provide more information more easily. The parts are:
 - *Part 1 Overview:* The overview book provides a high level overview of the standard.
 - *Part 2 Common Architecture:* This part covers general information about the interface, such as security and protocols.
 - *Part 3 Common Profiles:* This part covers component profiles that extend profiles in other books, such as target ports and job control.
 - *Part 4 Block Devices:* This part covers storage profiles that support various forms of disk storage.
 - *Part 5 Filesystems:* This part covers profiles that support filesystems, such as NAS (Network Attached Storage).
 - *Part 6 Fabric:* This part covers profiles that deal with interconnection of host servers and storage devices, such as switches.
 - *Part 7 Host Elements:* This part covers profiles for storage software on host servers, such as disk partitioning and Host Hardware RAID controllers.
 - *Part 8 Media Libraries:* This part covers profiles that deal with removable media such as tape libraries.
- **Maturity identification.** As material is added to the standard it goes through various stages of maturity. The initial stage is *Experimental*, which is material that has not yet been implemented and is subject to change. The other stages indicate the degree of implementations. The stages are:
 - **Experimental:** Full design review, no commercial implementations.
 - **Implemented:** Initial implementations available, may be removed at minor revision.
 - **Stable:** Three or more vendors have implemented the identified material, backward compatibility assured, removed only at major revision.
 - **Finalized:** Relies solely on Finalized content, deprecated only at major revision.
 - **Deprecated:** Obsolete material, may be removed in future revisions.

For a more detailed explanation of each maturity level and its typographical indication, see Clause 4 Typographical Conventions.

- **Expanded scope.** The range of SAN components modeled by the profiles defined in the parts has been greatly expanded.
 - New profiles include:
 - *Part 3 Common Profiles:* Serial Attached SCSI (SAS) Target Port, Serial ATA (SATA) Target Ports, SB Target Port, SAS Initiator Ports, ATA Initiator Ports, FC-SB-x Initiator Ports, FCoE Initiator Ports, Power Supply, Fan, Sensors, Base Server, Media Access Device, Storage Enclosure, Software Inventory, Profile Registration, Proxy Server System Management, Operational Power.
 - *Part 4 Block Devices:* Block Storage Views, CKD Block Services, Erasure, Storage Server Asymmetry, Volume Composition, Storage Element Protection, Replication Services, Pools from Volumes, Group Masking and Mapping, Thin Provisioning.
 - *Part 5 Filesystems:* File Export, File Server Manipulation, File Storage, Filesystem, Filesystem Copy Services, Filesystem Performance, Filesystem Quotas, NAS Network Port, Host Filesystem, Filesystem Remote Copy Services.
 - *Part 6 Fabric:* Fibre Channel Security, Fabric Views, Virtual Fabrics, Switch Partitioning, SAS Expander, N Port Virtualizer, Inter Fabric Routing.
 - *Part 7 Host Elements:* Storage HBA, Host Hardware RAID Controller.
 - *Part 8 Media Libraries:* Partitioned Tape Library, Virtual Tape Library, Virtual Tape Library Copy and Library Views.
 - The following experimental profiles were removed from the International Standard:
 - *Part 3 Common Profiles:* Security, 3rd Party Authentication, Authorization, Credential Management, Identity Management, Security Role Based Access Control and Security Resource Ownership.
 - *Part 4 Block Devices:* Pool Management Policy.
 - The following profiles were deprecated:
 - *Part 3 Common Profiles:* Cascading (replaced by direct use of cascading classes).
 - *Part 4 Block Devices:* Volume Management (and not replaced).
 - *Part 6 Fabric:* Router (and not replaced).
 - *Part 7 Host Elements:* FC HBA (replaced by Storage HBA), SB Multipath Management (and not replaced).
 - *Part 8 Media Libraries:* InterLibraryPort Connection (and not replaced).
 - In addition, many of the existing profiles have been enhanced.

This International Standard was prepared by the SNIA (Storage Networking Industry Association)¹. The standard is often referred to as **SMI-S** (*Storage Management Initiative Specification*).

INFORMATION TECHNOLOGY – STORAGE MANAGEMENT – Part 4: Block devices

1 Scope

This part of ISO/IEC 24775 defines an interface for the secure, extensible, and interoperable management of a distributed and heterogeneous storage system. This interface uses an object-oriented, XML-based, messaging-based protocol designed to support the specific requirements of managing devices and subsystems in this storage environment. Using this protocol, this International Standard describes the information available to a WBEM Client from an Information technology – Storage management compliant CIM WBEM Server.

2 Normative References

The following documents, in whole or in part, are normatively referenced in the document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document, including any amendments, applies.

ISO/IEC 24775-2, *Information technology – Storage management – Part 2: Common architecture*

ISO/IEC 24775-3, *Information technology – Storage management – Part 3: Common profiles*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 24775-2 as well as the following apply.

3.1

Constituent Volume

StorageVolumes used to create a concrete StoragePool

3.2

Pool Volume

StorageVolume created from a Constituent Pool

3.3

Constituent Pool

concrete StoragePool created from constituent volumes
