Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 13706 was prepared by Technicat committee ISO/TC 67, *Materials, equipment and offshore structures* for petroleum, petrochemical and natural gas industries, Subcommittee SC 6, Processing equipment and systems.

This second edition cancels and replaces the first edition (ISO 13706:2000), which has been technically revised.

first edition (ISO 13706:2000), when

Introduction

Users of this International Standard should be aware that further or differing requirements may be needed for individual applications. This International Standard is not intended to inhibit a vendor from offering, or the purchaser from accepting, alternative equipment or engineering solutions for the individual application. This

Users of this international Standard should be aware that further of direting requirements may be needed to inbit a vendor from offering, or the purchaser from accepting, alternative equipment or engineering solutions for the individual application. This mentational Standard is not internative to developing technology. Where an alternative is offered, the vendor should be there there is innovative or developing technology. Where an alternative is offered, the vendor should be there there is innovative or developing technology. Where an alternative is offered, the vendor should be there there is innovative or developing technology. Where an alternative is offered, the vendor should be there any variations from this International Standard and provide details.

Petroleum, petrochemical and natural gas industries — Aircooled heat exchangers

1 Scope

This International Standard gives requirements and recommendations for the design, materials, fabrication, inspection, testing and reparation for shipment of air-cooled heat exchangers for use in the petroleum and natural gas industries.

This International Standard s applicable to air-cooled heat exchangers with horizontal bundles, but the basic concepts can also be applied to other configurations.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 76, Rolling bearings — Static load ratings 🔇

ISO 281, Rolling bearings — Dynamic load ratings and rating life

ISO 286 (all parts), ISO system of limits and fits

ISO 1081, Belt drives — V-belts and V-ribbed belts, and coresponding grooved pulleys — Vocabulary

ISO 1459, Metallic coatings — Protection against corrosion by Rodip galvanizing — Guiding principles

ISO 1461, Hot dip galvanized coatings on fabricated iron and steel articles — Specifications and test methods

ISO 2491, Thin parallel keys and their corresponding keyways (Dimensions in millimetres)

ISO 3744, Acoustics — Determination of sound power levels of noise sources using sound pressure — Engineering method in an essentially free field over a reflecting plane

ISO 4183, Belt drives — Classical and narrow V-belts — Grooved pulleys (system based on datum width)

ISO 4184, Belt drives — Classical and narrow V-belts — Lengths in datum system

ISO 5287, Belt drives - Narrow V-belts for the automotive industry - Fatigue test

ISO 5290, Belt drives — Grooved pulleys for joined narrow V-belts — Groove sections 9N/J, 15N/J and 25N/J (effective system)

ISO 8501-1, Preparation of steel substrates before application of paints and related products — Visual assessment of surface cleanliness — Part 1: Rust grades and preparation grades of uncoated steel substrates and of steel substrates after overall removal of previous coatings

ISO 9563, Belt drives — Electrical conductivity of antistatic endless synchronous belts — Characteristics and test method

AGMA 6001¹), Design and selection of components for enclosed gear drives

AGMA 6010, Standard for spur, helical, herringbone and bevel enclosed drives

ASME PTC 30²), Air cooled heat exchangers

ICC³⁾, International Building Code

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

one or more items arranged in a continuous structure

3.2

bare tube surface

total area of the outside surfaces of the tubes, pased on the length measured between the outside faces of the header tubesheets

3.3

bay

one or more tube bundles, serviced by two or more fan including the structure, plenum and other attendant equipment

NOTE Figure 1 shows typical bay arrangements.

3.4

finned surface

 $\langle \text{of a tube} \rangle$ total area of the outside surface exposed to air

3.5

forced-draught exchanger

exchanger designed with the tube bundles located on the discharge side of the fa

3.6

induced-draught exchanger

exchanger designed with the tube bundles located on the suction side of the fan

3.7

item

one or more tube bundles for an individual service

3.8

item number

purchaser's identification number for an item
