

Geosynthetic barriers - Test method for determining the resistance to leaching

Geosynthetic barriers - Test method for determining the resistance to leaching

EESTI STANDARDI EESSÖNA**NATIONAL FOREWORD**

Käesolev Eesti standard EVS-EN 14415:2004 sisaldb Euroopa standardi EN 14415:2004 ingliskeelset teksti.	This Estonian standard EVS-EN 14415:2004 consists of the English text of the European standard EN 14415:2004.
Käesolev dokument on jõustatud 27.08.2004 ja selle kohta on avaldatud teade Eesti standardiorganisatsiooni ametlikus väljaandes.	This document is endorsed on 27.08.2004 with the notification being published in the official publication of the Estonian national standardisation organisation.
Standard on kättesaadav Eesti standardiorganisatsioonist.	The standard is available from Estonian standardisation organisation.

Käsitlusala: This European Standard describes a method of testing the resistance to leaching of polymeric or bituminous geosynthetic barriers, and the polymeric component of geosynthetic clay barriers, in hot water (method A), aqueous alkaline liquids (method B) and organic alcohols (method C).	Scope: This European Standard describes a method of testing the resistance to leaching of polymeric or bituminous geosynthetic barriers, and the polymeric component of geosynthetic clay barriers, in hot water (method A), aqueous alkaline liquids (method B) and organic alcohols (method C).

Barrières géosynthétiques - Méthode d'essai pour la
détermination de la résistance à la lixiviation

Geosynthetische Dichtungsbahnen - Prüfverfahren zur
Bestimmung der Beständigkeit gegen Auslaugen

This European Standard was approved by CEN on 2 February 2004.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 14415:2004) has been prepared by Technical Committee CEN/TC 189, "Geosynthetics", the secretariat of which is held by IBN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2004, and conflicting national standards shall be withdrawn at the latest by November 2004.

This document includes a Bibliography.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Introduction

This European Standard defines a method for testing the behaviour geosynthetic barriers in hot water, aqueous alkaline liquids and organic alcohols, with respect to leaching, visible changes, and tensile properties. Leaching of stabilizers can accelerate the oxidation of the geosynthetic barrier.

The standard does not purport to address all of the safety problems, if any, associated with its use.

1 Scope

This European Standard describes a method of testing the resistance to leaching of polymeric or bituminous geosynthetic barriers, and the polymeric component of geosynthetic clay barriers, in hot water (method A), aqueous alkaline liquids (method B) and organic alcohols (method C).

2 Normative References

This European Standard incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

EN 12226:2000	<i>Geotextiles and geotextile-related products-General tests for evaluation following durability testing</i>
EN 14030	<i>Geotextiles and geotextile-related products - Screening test method for determining the resistance to acid and alkaline liquids (ISO/TR 12960:1998, modified)</i>

3 Terms and Definitions

For the purposes of this European Standard, the terms and definitions given in prEN ISO 10318:2000 apply.

4 Principle

A sample of geosynthetic barrier is placed in the test liquid for 56 days. Subsequently the sample is recovered from the liquid and changes in properties (mass change, mechanical and visible) are measured in accordance with EN ISO 527.

5 Reagents

Following reagents are used:

- Distilled or de-ionized water;
- Saturated Ca(OH)₂ in accordance with EN 14030;
- A mixture of:
 - 30 volume-% methanol;
 - 30 volume-% 2-propanol (isopropanol);
 - 40 volume-% 1,2-ethanediol (glycol).
