Space engineering - Space environment

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

See Eesti standard EVS-EN 16603-10-04:2015 sisaldb Euroopa standardi EN 16603-10-04:2015 ingliskeelset teksti.	This Estonian standard EVS-EN 16603-10-04:2015 consists of the English text of the European standard EN 16603-10-04:2015.
Standard on jõustunud sellekohase teate avaldamisega EVS Teatajas	This standard has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation.
Euroopa standardimisorganisatsioonid on teinud Euroopa standardi rahvuslikele liikmetele kättesaadavaks 28.01.2015.	Date of Availability of the European standard is 28.01.2015.
Standard on kättesaadav Eesti Standardikeskusest.	The standard is available from the Estonian Centre for Standardisation.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile standardiosakond@evs.ee.

ICS 49.140

Supersedes EN 14092:2002

English version

Space engineering - Space environment

Ing?ierie spatiale - Environnement spatial

Raumfahrttechnik - Raumfahrtumweltbedingungen

This European Standard was approved by CEN on 28 December 2013.

CEN and CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN and CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN and CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Table of contents

Foreword	12
Introduction.....	13
1 Scope.....	14
2 Normative references	15
3 Terms, definitions and abbreviated terms.....	17
3.1 Terms defined in other standards	17
3.2 Terms specific to the present standard	17
3.3 Abbreviated terms.....	26
4 Gravity	29
4.1 Introduction and description	29
4.1.1 Introduction	29
4.1.2 Gravity model formulation	29
4.1.3 Third body gravitation.....	31
4.1.4 Tidal effects.....	31
4.2 Requirements for model selection and application.....	31
4.2.1 General requirements for gravity models.....	31
4.2.2 Selection and application of gravity models.....	32
5 Geomagnetic fields	33
5.1 Introduction and description	33
5.1.1 The geomagnetic field and its sources	33
5.1.2 The internal field	33
5.1.3 External field: ionospheric components	34
5.1.4 External magnetic field: magnetospheric components.....	34
5.1.5 Models of the internal and external geomagnetic fields	34
5.2 Requirements for model selection and application.....	36
5.2.1 The internal field	36
5.2.2 The external field	36
5.3 Tailoring guidelines.....	37

6 Natural electromagnetic radiation and indices	38
6.1 Introduction and description	38
6.1.1 Introduction	38
6.1.2 Electromagnetic radiation and indices	38
6.2 Requirements	41
6.2.1 Electromagnetic radiation	41
6.2.2 Reference index values	42
6.2.3 Tailoring guidelines	42
6.3 Tables	43
7 Neutral atmospheres	45
7.1 Introduction and description	45
7.1.1 Introduction	45
7.1.2 Structure of the Earth's atmosphere	45
7.1.3 Models of the Earth's atmosphere	45
7.1.4 Wind model of the Earth's homosphere and heterosphere	46
7.2 Requirements for atmosphere and wind model selection	47
7.2.1 Earth atmosphere	47
7.2.2 Earth wind model	48
7.2.3 Models of the atmospheres of the planets and their satellites	48
8 Plasmas	49
8.1 Introduction and description	49
8.1.1 Introduction	49
8.1.2 Ionosphere	49
8.1.3 Plasmasphere	50
8.1.4 Outer magnetosphere	50
8.1.5 Solar wind	51
8.1.6 Magnetosheath	51
8.1.7 Magnetotail	51
8.1.8 Planetary environments	52
8.1.9 Induced environments	52
8.2 Requirements for model selection and application	52
8.2.1 General	52
8.2.2 Ionosphere	53
8.2.3 Auroral charging environment	53
8.2.4 Plasmasphere	54
8.2.5 Outer magnetosphere	54
8.2.6 The solar wind (interplanetary environment)	55

8.2.7	Other plasma environments	55
8.2.8	Tables	56
9	Energetic particle radiation	57
9.1	Introduction and description	57
9.1.1	Introduction	57
9.1.2	Overview of energetic particle radiation environment and effects	57
9.2	Requirements for energetic particle radiation environments.....	60
9.2.1	Trapped radiation belt fluxes	60
9.2.2	Solar particle event models	62
9.2.3	Cosmic ray models.....	63
9.2.4	Geomagnetic shielding.....	63
9.2.5	Neutrons	63
9.2.6	Planetary radiation environments	64
9.3	Preparation of a radiation environment specification	64

Foreword

This document (EN 16603-10-04:2015) has been prepared by Technical Committee CEN/CLC/TC 5 "Space", the secretariat of which is held by DIN.

This standard (EN 16603-10-04:2015) originates from ECSS-E-ST-10-04C.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 2015, and conflicting national standards shall be withdrawn at the latest by July 2015.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association.

This document supersedes EN 14092:2002.

This document has been developed to cover specifically space systems and has therefore precedence over any EN covering the same scope but with a wider domain of applicability (e.g. : aerospace).

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

This standard forms part of the System Engineering branch (ECSS-E-10) of the Engineering area of the ECSS system. As such it is intended to assist in the consistent application of space environment engineering to space products through specification of required or recommended methods, data and models to the problem of ensuring best performance, problem avoidance or survivability of a product in the space environment.

The space environment can cause severe problems for space systems. Proper assessment of the potential effects is part of the system engineering process as defined in ECSS-E-ST-10. This is performed in the early phases of a mission when consideration is given to e.g. orbit selection, mass budget, thermal protection, and component selection policy. As the design of a space system is developed, further engineering iteration is normally necessary with more detailed analysis.

In this Standard, each component of the space environment is treated separately, although synergies and cross-linking of models are specified. Informative annexes are provided as explanatory background information associated with each clause.

1

Scope

This standard applies to all product types which exist or operate in space and defines the natural environment for all space regimes. It also defines general models and rules for determining the local induced environment.

Project-specific or project-class-specific acceptance criteria, analysis methods or procedures are not defined.

The natural space environment of a given item is that set of environmental conditions defined by the external physical world for the given mission (e.g. atmosphere, meteoroids and energetic particle radiation). The induced space environment is that set of environmental conditions created or modified by the presence or operation of the item and its mission (e.g. contamination, secondary radiations and spacecraft charging). The space environment also contains elements which are induced by the execution of other space activities (e.g. debris and contamination).

This standard may be tailored for the specific characteristic and constraints of a space project in conformance with ECSS-S-ST-00.

2

Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this ECSS Standard. For dated references, subsequent amendments to, or revision of any of these publications do not apply. However, parties to agreements based on this ECSS Standard are encouraged to investigate the possibility of applying the more recent editions of the normative documents indicated below. For undated references, the latest edition of the publication referred to applies.
