Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 114183 was prepared by Technical Committee ISO/TC 76, *Transfusion, infusion and injection equipment for medical and pharmaceutical use*.

This second edition cancels and replaces the first edition (ISO 11418-3:1996), which has been technically revised.

ISO 11418 consists of the following parts, under the general title *Containers and accessories for pharmaceutical preparations*:

- *Part 1: Drop-dispensing glass bottles*
- *Part 2: Screw-neck glass bottles for syrups*
- *Part 3: Screw-neck glass bottles (veral) for solid and liquid dosage forms*
- *Part 4: Tablet glass bottles*
- *Part 5: Dropper assemblies*
- *Part 7: Screw-neck vials made of glass tubing for liquid dosage forms*

Containers and accessories for pharmaceutical preparations —

Part 3:

Screw-neck glass bottles (veral) for solid and liquid dosage forms

1 Scope

This part of ISO 11418 specifies the design, dimensions, material and requirements of screw-neck glass bottles (veral) for pharmaceutical preparations in solid and liquid dosage forms. Screw-neck glass bottles are applicable to primary packs used in direct contact with a drug.

This part of ISO 11418 is applicable to screw-neck glass bottles (veral) used in pharmacy. Together with the corresponding closure systems, they serve for packaging of pharmaceutical preparations in solid and liquid dosage forms which are not intended for parenteral use.

NOTE The potency, purity, stability and safety of a drug during its manufacture and storage can be strongly affected by the nature and performance of the primary pack.
