Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 639-4 was prepared by Technical Committee ISO/TC 37, *Terminology and other language and content resources*, Subcommittee SC 2, *Terminographical and lexicographical working methods*.

ISO 639 consists of the following parts, under the general title *Codes for the representation of names of languages*:

- *Part 1: Alpha-2 code*
- *Part 2: Alpha-3 code*
- *Part 3: Alpha-3 code for comprehensive coverage of languages*
- *Part 4: General principles of coding of the representation of names of languages and related entities, and application guidelines*
- *Part 5: Alpha-3 code for language families and groups*
- *Part 6: Alpha-4 code for comprehensive coverage of language variants*

Introduction

ISO 639 provides codes for the identification and specification of individual languages, language variants, and language groups. The identifiers may be used in a variety of applications, including specification of the language used in a text, the language of terms or words in a dictionary or terminological database, the language used in a spoken presentation, language proficiency, language capabilities of software, localization, etc. The various parts of ISO 639 are expected to be implemented in a number of environments.

Parts 1, 2, 3, and 5 of ISO 639 all contain some information about implementation issues. However, it is deemed necessary to expand those descriptions, and to have the implementation rules in a separate document. In future revisions of the other parts of ISO 639, it is expected that those standards will reference this part of ISO 639 rather than duplicating the information.

Codes for the representation of names of languages —

Part 4:

General principles of coding of the representation of names of languages and related entities, and application guidelines

1 Scope

This part of ISO 639 gives the general principles of language coding using the codes that are specified in the other parts of ISO 639 and their combination with other codes. Furthermore, this part of ISO 639 lays down guidelines for the use of any combination of the parts of ISO 639.

The terminology and general descriptions of this part of ISO 639 are intended to replace corresponding text of other parts of ISO 639 as relevant in future revisions.

Relevant metadata for the description of linguistic entities are also given, as a framework for databases of linguistic data to support the ISO 639 series of International Standards.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 639-1:2002, *Codes for the representation of names of languages — Part 1: Alpha-2 code*

ISO 639-2:1998, *Codes for the representation of names of languages — Part 2: Alpha-3 code*

ISO 639-3:2007, *Codes for the representation of names of languages — Part 3: Alpha-3 code for comprehensive coverage of languages*

ISO 639-5:2008, *Codes for the representation of names of languages — Part 5: Alpha-3 code for language families and groups*

ISO 3166-1:2006, *Codes for the representation of names of countries and their subdivisions — Part 1: Country codes*

ISO 3166-2:2007, *Codes for the representation of names of countries and their subdivisions — Part 2: Country subdivision code*

ISO 3166-3:1999, *Codes for the representation of names of countries and their subdivisions — Part 3: Code for formerly used names of countries*

ISO 8601:2004, *Data elements and interchange formats — Information interchange — Representation of dates and times*

ISO/IEC 11179-1:2004, *Information technology — Metadata registries (MDR) — Part 1: Framework*

ISO/IEC 11179-2:2005, *Information technology — Metadata registries (MDR) — Part 2: Classification*

ISO/IEC 11179-3:2003, *Information technology — Metadata registries (MDR) — Part 3: Registry metamodel and basic attributes*

ISO/IEC 11179-4:2004, *Information technology — Metadata registries (MDR) — Part 4: Formulation of data definitions*

ISO/IEC 11179-5:2005, *Information technology — Metadata registries (MDR) — Part 5: Naming and identification principles*

ISO/IEC 11179-6:2005, *Information technology — Metadata registries (MDR) — Part 6: Registration*

ISO 12620:2009, *Terminology and other language and content resources — Specification of data categories and management of a Data Category Registry for language resources*

ISO 15924:2004, *Information and documentation — Codes for the representation of names of scripts*

ISO 19111:2007, *Geographic information — Spatial referencing by coordinates*

ISO 19112:2003, *Geographic information — Spatial referencing by geographic identifiers*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

In future versions of other parts of ISO 639, it is expected that some or all of the terms and definitions will be replaced by a reference to the terms and definitions in this part of ISO 639.

NOTE The definitions in this part of ISO 639 are intended for practical use within the context of the various parts of ISO 639 and their applications. For various linguistic purposes, there are needs for more detailed, and possibly deviating, definitions.

3.1 code

data transformed or represented in different forms according to a pre-established set of rules

NOTE The usage of the term “code” is not uniform in all standardized coding systems. According to the usage that is defined in this part of ISO 639, a “code” is to be understood as a **code table** (3.2) and the set of rules relating to the code table. Each individual row in a code table is a **code element** (3.4) (e.g. “de - German - allemand - Deutsch” in Part 1 of ISO 639), while the item “de” is the **language identifier** (3.5).

3.2 code table

table of **code elements** (3.4) as part of a **code** (3.1)

3.3 code space

totality of possible values for a set of identifiers within a **code** (3.1)

EXAMPLE All sequences of two letters (a–z) form the code space of the alpha-2 language code as specified in part 1 of ISO 639.

NOTE The alpha-3 language codes that are specified in parts 2, 3, and 5 of ISO 639 share the same code space, i.e. no language identifier assigned in one of the parts may be assigned to a different item in another part.
