English Version

Railway applications - Braking - Brake blocks

Applications ferroviaires - Freinage - Semelles de frein

Bahnanwendungen - Bremse - Bremsklotzsohlen

This European Standard was approved by CEN on 28 February 2015.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword.....	7
Introduction	8
1 Scope	9
2 Normative references	9
3 Terms and definitions	10
4 Abbreviations	11
5 Overall requirements	12
5.1 Deviations from requirements	12
5.2 Functions	12
5.3 Operational criteria	13
5.3.1 Friction material performance	13
5.3.2 Service performance	13
5.3.3 Brake block characteristics	14
6 Acceptance procedure	14
6.1 Brake block performance requirements	14
6.1.1 General	14
6.1.2 Category A	14
6.1.3 Category B	15
6.1.4 Category C	15
6.2 Approval test requirements	15
6.3 Dynamometer specification	18
7 Category A requirements	18
7.1 Brake block characteristics	18
7.1.1 Standard design	18
7.1.2 Brake block characterization test	18
7.1.3 Brake block mechanical characteristics for service operation	18
7.2 Dynamic friction performance	19
7.2.1 Generic requirements for assessment process	19
7.2.2 Bedded and non bedded performance	19
7.2.3 Variation in mean coefficient of friction in dry condition for a brake to rest	19
7.2.4 Mean friction coefficient variation under wet conditions	19
7.2.5 Mean friction coefficient variation at high initial temperature	20
7.2.6 Mean friction coefficient variation after simulation of a downhill brake application	20
7.2.7 Instantaneous friction coefficient variation during simulation of a downhill brake application	20
7.2.8 Variation in instantaneous friction for a brake to rest	22
7.3 Static friction coefficient	22
7.4 Extreme winter conditions (freight wagons)	22
7.4.1 General	22
7.4.2 Dynamometer test	23
7.4.3 Train brake test	23
7.5 Locked brake (fusibility)	23
7.5.1 Generic prescriptions	23
7.5.2 Specific prescriptions for freight wagons	24
8 Category B requirements	24

B.11	Test wheels	32
Annex C (normative) Composite brake blocks (K) (2Bg – 2Bgu)– Demonstration of friction properties for S and SS (S/SS) – braked freight wagons ($v_{\max} = 120$ km/h)		33
C.1	Program for performance tests.....	33
C.2	Program for simulation brake assessment.....	38
C.3	Dispersion range of mean friction coefficients.....	39
C.4	Dispersion range of instantaneous friction coefficients.....	42
Annex D (normative) Composite brake blocks (LL) – Demonstration of friction properties for S and SS (S/SS) – braked freight wagons ($v_{\max} = 120$ km/h)		44
D.1	Program for performance tests.....	44
D.2	Program for simulation brake assessment.....	48
D.3	Dispersion range of mean friction coefficients.....	50
D.4	Dispersion range of instantaneous friction coefficients.....	52
Annex E (normative) Composite brake blocks (K) (1Bg)– Demonstration of friction properties for S and SS (S/SS) – braked freight wagons ($v_{\max} = 120$ km/h)		53
E.1	Program for performance tests.....	53
E.2	Dispersion range of mean friction coefficients.....	56

E.3	Dispersion range of instantaneous friction coefficients	58
Annex F (normative) Composite brake blocks (L) – Demonstration of friction properties for extra tread brake of coach.....		
F.1	Program for performance tests	59
F.2	Program for simulation brake assessment.....	62
F.3	Dispersion range of mean friction coefficients in dry condition	63
F.4	Dispersion range of mean friction coefficients in wet condition.....	64
F.5	Dispersion range of instantaneous friction coefficients	65
Annex G (normative) Composite brake blocks (K) – Demonstration of friction properties for locomotives		
G.1	Program for performance tests	67
G.2	Program for simulation brake assessment.....	70
G.3	Dispersion range of mean friction coefficients in dry condition	71
G.4	Dispersion range of mean friction coefficients in wet condition.....	72
G.5	Dispersion range of instantaneous friction coefficients	73
Annex H (normative) Composite brake blocks (K) – Demonstration of friction properties for EMU – DMU		
H.1	Program for performance tests	75
H.2	Program for simulation brake assessment.....	80
H.3	Dispersion range of mean friction coefficients in dry condition	81
H.4	Dispersion range of mean friction coefficients in wet condition.....	82
H.5	Dispersion range of instantaneous friction coefficients	83
Annex I (normative) Composite brake blocks (K) – Demonstration of friction properties for High speed train (motor bogie)		
I.1	Program for performance tests	85
I.2	Program for simulation brake assessment.....	88
I.3	Dispersion range of mean friction coefficients in dry condition	89
I.4	Dispersion range of mean friction coefficients in wet condition.....	91
I.5	Dispersion range of instantaneous friction coefficients	92
Annex J (informative) Dynamometer test program – Generic test program		
J.1	General.....	94
J.2	Generic test program	94
J.3	Definitions	97
J.4	Principle of assessment and pass/fail criteria.....	98
Annex K (normative) Dynamometer Test program to detect the formation of metal pick-up at the brake block		
K.1	Test program for freight wagons with brake blocks type K and LL	99
K.2	Test program for locomotives with brake blocks type K	101
K.3	Test program for EMU – DMU with brake blocks type K	103
K.4	Test program for High speed train with brake blocks type K	106

Annex L (normative) Dynamometer test program to demonstrate the extreme winter braking properties	109
L.1 Test program for freight wagons with brake blocks type K.....	109
L.2 Test program for freight wagons with brake blocks type LL.....	111
L.3 Specific requirements for conducting Test Programs L.1 and L.2	112
L.4 Process of assessment and past fail criteria for test programs L.1 and L.2	113
L.5 Generic flow chart to perform test program	114
L.6 Detailed flow chart to perform test program (example brake block K).....	115
Annex M (normative) Test run to demonstrate the extreme winter braking properties brake blocks K – LL for freight wagons.....	118
M.1 General	118
M.2 Test conditions	118
M.3 Bases for assessment.....	119
M.4 Assessment of measurement data and pass/fail criteria	121
Annex N (normative) Dynamometer Test program to simulate “Locked brake”	123
N.1 Test program for freight wagons with brake blocks type K and LL.....	123
N.2 Test program for locomotives with brake blocks type K	124
N.3 Test program for EMU – DMU with brake blocks type K.....	125
N.4 Test program for High speed train with brake blocks type K.....	126
Annex O (normative) Dynamometer test program to demonstrate the compatibility with track circuits	127
O.1 General	127
O.2 Short description of the measuring method used	127
O.3 Schematic diagram of test set up	127
O.4 Flow chart to perform test program	129
O.5 Preparation of the disc and the rollers.....	129
O.6 Preparation of the samples of brake block.....	129
O.7 Contamination of disc.....	130
O.8 Measurements	131
O.9 Assessment of the results.....	132
Annex P (informative) Vehicle test to demonstrate the compatibility with track circuits	134
P.1 General	134
P.2 Test conditions	134
P.3 Assessment of results	135
P.4 Pass/fail criteria	136
Annex Q (informative) Dynamometer test program – Determination of static friction coefficient.....	138
Q.1 Test program for freight wagons with brake blocks type K and LL.....	138
Q.2 Test program for EMU – DMU and Locomotive with brake blocks type K	139
Q.3 Test program for High speed train with brake blocks type K.....	140

Q.4	Specific Requirements for conducting dynamometer test programmes Q.1 to Q.3	140
Annex R (informative)	Dynamometer test program – Simulation of service conditions for freight wagons.....	143
R.1	Simulation freight wagon with brake block type K 2Bgu	143
R.2	Simulation freight wagon with brake block type LL 2Bgu	145
Annex S (normative)	Interchangeability, rejection lugs and critical dimensions	148
Annex T (normative)	Brake block shear and flexural strength tests.....	151
T.1	General.....	151
T.2	Shear strength test	151
T.3	Flexural strength test	152
Annex U (normative)	Limitation of permissible mechanical damage of brake block.....	154
U.1	General.....	154
U.2	Cracked through to back-plate.....	154
U.3	Crumbling of the friction material	155
U.4	Metal pick-up	155
U.5	Detachment from back-plate	156
U.6	Cracks in the direction of wheel circumference.....	156
U.7	Detachment of the friction material	156
U.8	Interface with the brake block holder	156
Annex V (normative)	In service assessment of brake block.....	158
V.1	General.....	158
V.2	Freight wagon	158
V.3	Coach	159
V.4	Locomotive.....	159
V.5	EMU-DMU.....	160
V.6	High speed train.....	160
V.7	Description of areas to be monitored and additional measures	161
V.8	Pass/fail criteria	162
Annex W (informative)	Complementary definitions and abbreviations	163
Annex X (informative)	Brake block characterization test.....	165
Annex ZA (informative)	Relationship between this European Standard and the Essential Requirements of EU Directive 2008/57/EC	166
Bibliography	169

Foreword

This document (EN 16452:2015) has been prepared by Technical Committee CEN/TC 256 "Railway applications", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by January 2016, and conflicting national standards shall be withdrawn at the latest by January 2016.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive 2008/57/EC.

For relationship with EU Directive 2008/57/EC, see informative Annex ZA, which is an integral part of this document.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

For environmental reasons (reduction of rolling noise), this European Standard does not cover cast iron brake block requirements, although cast iron brake block technology is still widely used in Europe. Cast iron has already been replaced by composite materials for new rolling stock builds and major steps have been taken by EEC (TSI) and UIC in 2004 to accelerate the change from cast iron to composite materials.

When published this European Standard will replace the current UIC requirements for technical approval of brake blocks. The requirements of this EN are based on the state of art from UIC leaflet and a European project "Euro Rolling Silently".

1 Scope

This European Standard gives the requirements for the design, dimensions, performance, and testing of a brake block (otherwise known as brake shoe insert) that acts on the wheel tread as part of a tread brake system. This European Standard does not cover cast iron brake block requirements.

This European Standard is applicable to brake blocks of either “K”, “L”, or “LL” friction level designed to be fitted to tread braked rail vehicles.

This European Standard contains the requirements for interfacing the brake block with the rail vehicle, the testing procedures in order to confirm that it satisfies the basic safety and technical interchangeability requirements, the material control procedures to ensure product quality, reliability and conformity and considers health and environmental needs.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 14478 and the following apply.

3.1
application parameter
configuration parameters refer to vehicle mass, operating speed, wheel diameter, braked mass, brake block configuration, brake block force

3.2
Bg configuration
one brake block 320 mm per brake block holder

Note 1 to entry: Bg comes from UIC and means "Bremsklotzsohle geteilt".

3.3
Bgu configuration
two brake blocks 250 mm per brake block holder

Note 1 to entry: Bgu comes from UIC and means "Bremse geteilt mit unterteilter Sohle".

3.4
brake block
stator part of a tread brake adapted to generate a friction force when engaged with a wheel tread

3.5
brake block force
force with which the brake block is made to come into contact with the wheel tread

3.6
friction material
consumable portion of the brake block that acts on the wheel tread in order to provide the specified brake performance

3.7
coefficient of friction

3.7.1
mean coefficient of friction
coefficient of friction of the friction material, integrated over distance, for any one condition of braking
