Gaasivarustuse süsteemid. Maagaasi mõõtejaamat. Funktsionaalnõuded

Gas supply systems - Natural gas measuring stations - Functional requirements

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

Käesolev Eesti standard EVS-EN 1776:2000 sisaldb Euroopa standardi EN 1776:1998 ingliskeelset teksti.	This Estonian standard EVS-EN 1776:2000 consists of the English text of the European standard EN 1776:1998.
Standard on kinnitatud Eesti Standardikeskuse 31.05.2000 käskkirjaga ja jõustub sellekohase teate avaldamisel EVS Teatajas.	This standard is ratified with the order of Estonian Centre for Standardisation dated 31.05.2000 and is endorsed with the notification published in the official bulletin of the Estonian national standardisation organisation.
Euroopa standardimisorganisatsioonide poolt rahvuslikele liikmetele Euroopa standardi teksti kätesaadavaks tegemise kuupäev on 16.12.1998.	Date of Availability of the European standard text 16.12.1998.
Standard on kätesaadav Eesti standardiorganisatsionist.	The standard is available from Estonian standardisation organisation.

ICS 75.180.30

Võtmesõnad: gaasi arvestamine, gaasiarvesti, kaslibreerimine, korrasroid, käitustingimused, maagaas, mõõtmised, märgistamine, talitluse hindamine, tehnilised andmed, turvalisus, töökindlus

Standardite reproduutseerimis- ja levitamisõigus kuulub Eesti Standardikeskusele

Andmete paljundamine, taastekitamine, kopeerimine, salvestamine elektroonilisse süsteemi või edastamine ükskõik millises vormis või millisel teel on keelatud ilma Eesti Standardikeskuse poolt antud kirjaliku loata.

EUROPEAN STANDARD NORME EUROPÉENNE EUROPÄISCHE NORM

EN 1776

December 1998

ICS 75.180.30

English version

Gas supply systems Natural gas measuring stations Functional requirements

Alimentation en gaz – Postes de
comptage de gaz naturel – Prescrip-
tions fonctionnelles

Gasversorgung – Erdgasmeßanlagen –
Funktionale Anforderungen

This European Standard was approved by CEN on 1998-11-27.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, the Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and the United Kingdom.

Foreword

This European Standard has been prepared by Technical Committee CEN/TC 234 "Gas supply", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 1999, and conflicting national standards shall be withdrawn at the latest by June 1999.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

This European Standard relates to other functional standards in the field of gas supply.

The standard is meant for use by gas professionals with enough understanding of their measurement's objectives and applicable gas techniques. A thorough understanding of this standard is highly desirable before starting the design phase of a new measuring station.

In some cases the billing is done in energy units. A part of the standard is therefore dedicated to calorific value measurement.

By nature, a measuring station is an aggregate of several components. In this standard, it is assumed that each component is in full compliance with applicable EN or ISO standards, if any.

1 Scope

This European standard specifies functional requirements for the design, construction, commissioning, operation and maintenance of new gas measuring stations for non-domestic custody transfer of natural gas as described in ISO 13686 with a design capacity equal to or greater than 500 m³/h (at base conditions, see 4.1) and for operating pressures equal to or greater than 1 bar (gauge pressure).

NOTE: Installations using diaphragm gas meters as primary measuring instruments are not covered by this standard.

Except for safety and environmental aspects, the extent to which the requirements of this standard are applied should be justified by the economics of the measuring station. Therefore, stations with an annual throughput of equal to or smaller than 300 000 m³ (at base conditions) are excluded from the scope of this standard.

This European Standard specifies common basic principles for gas supply systems.

Users of this European Standard should be aware that more detailed national standards and/or codes of practice may exist in the CEN member countries.

This European Standard is intended to be applied in association with these national standards and/or codes of practice setting out the above mentioned basic principles.

2 Normative references

This European Standard incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the next and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of those publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

- IEC 801 Electromagnetic compatibility for industrial-process measurement and control equipment

3 Definitions

For the purposes of this standard, the following definitions apply:

3.1 measuring station: An installation comprising all the equipment including the inlet and outlet pipework as far as the isolating valves and any structure within which the equipment is housed, used for gas measurement in custody transfer.

3.2 measuring system: Complete set of measuring instruments and other equipment assembled to carry out specified measurements.

3.3 measuring instrument: Device intended to be used for measurements, alone or in conjunction with supplementary device(s).

EXAMPLE 1: gas meter

EXAMPLE 2: pressure sensor
