

Second edition  
2015-11-01

---

---

**Information technology — Digitally recorded media for information interchange and storage — 120 mm Triple Layer (100,0 Gbytes single sided disk and 200,0 Gbytes double sided disk) and Quadruple Layer (128,0 Gbytes single sided disk) BD Recordable disk**

*Technologies de l'information — Supports enregistrés numériquement pour échange et stockage d'information — 120 mm de couche triple (100,0 Go disque unique face et 200,0 Go disque double face) et quadruple couche (128,0 Go disque unique face) sur disque enregistrable BD*

<b>9.10 Measurement Velocities and Reference servos for axial tracking .....</b>	<b>19</b>
<b>9.10.1 General .....</b>	<b>19</b>
<b>9.10.2 Reference servo for axial tracking at 1x Measurement Velocity .....</b>	<b>19</b>
<b>9.10.3 Reference servo for axial tracking at 2x Measurement Velocity .....</b>	<b>20</b>
<b>9.11 Measurement Velocities and Reference servos for radial tracking .....</b>	<b>21</b>
<b>9.11.1 General .....</b>	<b>21</b>
<b>9.11.2 Reference servo for radial tracking at 1x Measurement Velocity .....</b>	<b>22</b>
<b>9.11.3 Reference servo for radial tracking at 2x Measurement Velocity .....</b>	<b>23</b>
<b>10 Dimensional characteristics.....</b>	<b>24</b>
<b>10.1 General .....</b>	<b>24</b>
<b>10.2 Disk reference planes and reference axis.....</b>	<b>25</b>
<b>10.3 Overall dimensions .....</b>	<b>26</b>
<b>10.4 First transition Area .....</b>	<b>26</b>

10.5	Protection ring .....	27
10.6	Clamping Zone .....	27
10.7	Second transition Area .....	27
10.8	Information Area .....	27
10.8.1	General.....	27
10.8.2	Subdivision of Information Zone on TL disk .....	28
10.8.3	Subdivision of Information Zone on QL disk .....	29
10.9	Rim Area .....	30
11	Mechanical characteristics .....	32
11.1	Mass .....	32
11.2	Moment of inertia .....	32
11.3	Dynamic imbalance .....	32
11.4	Axial runout .....	32
11.4.1	General.....	32
11.4.2	Residual axial tracking error for 1x Measurement Velocity .....	32
11.4.3	Residual axial tracking error for 2x Measurement Velocity .....	33
11.5	Radial runout.....	33
11.5.1	General.....	33
11.5.2	Residual radial tracking error on 1x Measurement Velocity .....	33
11.5.3	Residual radial tracking error on 2x Measurement Velocity .....	34
11.6	Durability of Cover Layer .....	34
11.6.1	Impact resistance of Cover Layer .....	34
11.6.2	Scratch resistance of Cover Layer.....	34
11.6.3	Repulsion of fingerprints by Cover Layer .....	34
12	Optical characteristics in Information Area .....	35
12.1	General.....	35
12.2	Refractive index of the Transmission Stacks (TS).....	35
12.3	Thickness of Transmission Stacks (TS).....	35
12.3.1	Thickness of Transmission Stack of TL disks.....	35
12.3.2	Example of target thickness of Spacer Layers for TL disks .....	36
12.3.3	Thickness of Transmission Stacks of QL disks .....	36
12.3.4	Example of target thickness of Spacer Layers for QL disks.....	37
12.4	Reflectivity of Recording Layers.....	40
12.5	Birefringence.....	40
12.6	Angular deviations.....	41
13	Data Format .....	42
13.1	General.....	42
13.2	Data Frame .....	44
13.3	Error-Detection Code (EDC) .....	44
13.4	Scrambled Data Frame .....	45
13.5	Data Block .....	46
13.6	LDC Block .....	46
13.7	LDC code-words .....	47
13.8	LDC Cluster .....	48
13.8.1	General.....	48
13.8.2	First interleaving step .....	48
13.8.3	Second interleaving step .....	48
13.9	Addressing and Control Data .....	50
13.9.1	General.....	50
13.9.2	Address Units.....	50
13.9.3	User Control Data .....	54
13.9.4	Byte/Bit assignments for User Control Data.....	54
13.10	Access Block.....	56
13.11	BIS Block .....	56
13.12	BIS code-words.....	57
13.13	BIS Cluster.....	58
13.14	ECC Cluster .....	62
13.15	Recording Frames .....	63

13.16	Physical Cluster .....	63
13.17	17PP Modulation for Recordable data .....	63
13.17.1	General .....	63
13.17.2	Bit conversion rules .....	64
13.17.3	dc-control procedure .....	64
13.17.4	Frame Sync .....	64
13.18	Modulation and NRZI conversion .....	66
14	Physical Data Allocation and Linking .....	67
14.1	General .....	67
14.2	Recording-Unit Block (RUB) .....	67
14.2.1	General .....	67
14.2.2	Data Run-in .....	67
14.2.3	Data Run-out .....	68
14.2.4	Guard_3 field .....	69
14.3	Locating data relative to wobble addresses .....	70
15	Track Format .....	71
15.1	General .....	71
15.2	Track shape .....	71
15.3	Track path .....	72
15.4	Track Pitch .....	73
15.4.1	Track Pitch in Zone reserved for BCA .....	73
15.4.2	Track Pitch in Embossed HFM Area .....	73
15.4.3	Track Pitch in Recordable Areas .....	73
15.4.4	Track Pitch between Embossed HFM Area and Recordable Area .....	73
15.5	Track layout of HFM Groove .....	73
15.5.1	General .....	73
15.5.2	Data Format .....	74
15.5.3	Addressing and Control Data .....	75
15.5.4	Recording Frames .....	79
15.6	Track layout of Wobbled Grooves .....	80
15.6.1	General .....	80
15.6.2	Modulation of wobbles .....	81
15.6.3	Wobble polarity .....	82
15.7	ADIP information .....	82
15.7.1	General .....	82
15.7.2	ADIP-Unit Types .....	83
15.7.3	ADIP word structure .....	83
15.7.4	ADIP data structure .....	84
15.7.5	ADIP error correction .....	88
15.8	Disk Information in ADIP Aux Frame .....	89
15.8.1	General .....	89
15.8.2	Error protection for Disk Information Aux Frames .....	90
15.8.3	Disk-Information Data structure .....	90
16	General description of Information Zone .....	137
16.1	General .....	137
16.2	Format of Information Zone on Triple-Layer disk .....	137
16.3	Format of Information Zone on Quadruple-Layer disk .....	137
17	Layout of Recordable Area of Information Zone .....	137
18	Inner Zone(s) .....	147
18.1	General .....	147
18.2	Permanent Information & Control Data (PIC) Zone .....	155
18.2.1	Genarel .....	155
18.2.2	Content of PIC Zone .....	155
18.2.3	Emergency Brake .....	157
18.3	Recordable Area of Lead-in Zone of TL disk .....	158
18.3.1	Protection-Zone 2 .....	158
18.3.2	Buffer .....	158

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/IEC JTC 1, *Information technology, SC 23, Digitally recorded media for information interchange and storage*.

This second edition cancels and replaces (ISO/IEC 30191: 2013), of which it constitutes a minor revision.

## Introduction

In March 2002, 9 companies started BDF (Blu-ray Disc Founders) aiming for the creation of the Formats with large capacity and high speed transfer rate, that enable the recording and reproducing of the high definition video contents. In October 2004, more than 100 companies joined and BDF was changed to an open forum named BDA (Blu-ray Disc Association). In October 2005, BDA issued the first version of the Blu-ray Disc™ Recordable Format Part1 and in April 2008 Version 1.3 of Blu-ray Disc™ Recordable Format Part1 was issued, which enabled the Recording Velocity up to 6x. In June 2010, BDA issued Blu-ray Disc™ Recordable Format Part1 Version 2.0, which specifies the TL and QL of BD Recordable disk.

By the end of 2010, over 100 million Blu-ray Disc™ had already been shipped, and Blu-ray™ devices such as players, recorders, game consoles and PC drives were in use all over the world.

The BDA also conducts verification activities for both disks and devices and has established more than 10 Testing Centers in Asia, Europe and the USA.

The BDA gave consumer applications the highest priority in the first few years. But it was known, of course, that International Standardization would be required before many government entities and their contractors would be allowed to use Blu-ray Disc™. In February and January of 2011, the chairs of ISO/IEC JTC 1/SC 23 and JIIMA (Japan Image & Information Management Association) formally requested the BDA to consider International Standardization. The reason for this was to enable the inclusion of writable BDs, along with DVDs and CDs, in an International Standard specifying test methods for the estimation of lifetime of optical storage media for long-term data storage. In October 2011, the President of the BDA responded that his organization had decided to pursue International Standard of the basic physical formats for the Recordable and Rewritable Blu-ray™ Formats.

In December of 2011, the BDA sent project proposals for the International standardization of four formats to ISO/IEC JTC 1/SC 23 via the Japan national body. In July of 2013, ISO/IEC published the four International standards. They are ISO/IEC 30190 - 120 mm Single Layer (25,0 Gbytes per disk) and Dual Layer (50,0 Gbytes per disk) BD Recordable disk, ISO/IEC 30192 - 120 mm Single Layer (25,0 Gbytes per disk) and Dual Layer (50,0 Gbytes per disk) BD Rewritable disk, ISO/IEC 30191 - 120 mm Triple Layer (100,0 Gbytes per disk) and Quadruple Layer (128,0 Gbytes per disk) BD Recordable disk and ISO/IEC 30193 - 120 mm Triple Layer (100,0 Gbytes per disk) BD Rewritable disk.

In July of 2014, the BDA developed a double sided Triple Layer BD Recordable disk of 200,0 Gbytes and revised Blu-ray Disc™ Recordable Format Part1 Version 2.0 to Version 2.1. In the same month, the BDA sent a project proposal to revise ISO/IEC 30191 to include the double sided Triple Layer BD Recordable disk to ISO/IEC JTC 1/SC 23 via the Japan national body. The revised edition of ISO/IEC 30191 includes the 120 mm Triple Layer (100,0 Gbytes single sided disk and 200,0 Gbytes double sided disk) and Quadruple Layer (128,0 Gbytes single sided disk) BD Recordable disk.

This International Standard specifies the mechanical, physical and optical characteristics of a 120 mm recordable optical disk with a capacity of 100,0 Gbytes, 128,0 Gbytes or 200,0 Gbytes.

A few additional specifications are required in order to write and read video-recording applications, such as the BDMV and BDAV formats, which have been specified by the BDA for use on BD Recordable disks. These specifications, which are related to the Application, the file system or the Content-protection system, are required for the disk, the generating system and the receiving system. For more information of the Application, the Content-protection system and the additional requirements for the Blu-ray™ Format specifications, see <http://www.blu-raydisc.info>.

The International Organization for Standardization (ISO) and International Electrotechnical Commission (IEC) draw attention to the fact that it is claimed that compliance with this document may involve the use of patents.

ISO and IEC take no position concerning the evidence, validity and scope of these patent rights.

The holders of these patent rights have assumed ISO and IEC that they are willing to negotiate licenses under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statements of holders of these patent rights are registered with ISO and IEC. Information may be obtained from:

# Information technology — Digitally recorded media for Information interchange and storage — 120 mm Triple Layer (100,0 Gbytes single sided disk and 200,0 Gbytes double sided disk) and Quadruple Layer (128,0 Gbytes single sided disk) BD Recordable disk

## 1 Scope

This International Standard specifies the mechanical, physical and optical characteristics of a 120 mm recordable optical disk with a capacity of 100,0 Gbytes, 128,0 Gbytes or 200,0 Gbytes. It specifies the quality of the recorded and unrecorded signals, the format of the data and the recording method, thereby allowing for information interchange by means of such disks. User data can be written once and read many times using a non-reversible method. This disk is identified as BD Recordable disk.

This International Standard specifies

- three related but different Types of this disk,
- the conditions for conformance,
- the environments in which the disk is to be operated and stored,
- the mechanical and physical characteristics of the disk, so as to provide mechanical interchange between data processing systems,
- the format of the information on the disk, including the physical disposition of the Tracks and Sectors,
- the error correcting codes and the coding method used,
- the characteristics of the signals recorded on the disk, enabling data processing systems to read the data from the disk.

This International Standard provides for interchange of disks between disk drives. Together with a standard for volume and file structure, it provides for full data interchange between data processing systems.

## 2 Conformance

### 2.1 Optical disk

A claim of conformance with this International Standard shall specify the Type implemented. An optical disk shall be in conformance with this International Standard if it meets all mandatory requirements specified for its Type.

### 2.2 Generating system

A generating system shall be in conformance with this International Standard if the optical disk it generates is in accordance with 2.1.

### 2.3 Receiving system

A receiving system shall be in conformance with this International Standard if it is able to handle both a Type TL disk and a Type QL disk according to 2.1. Handling of a Type TL/D disk is optional for a receiving system. See Clause 7 for the Types of disk.

### 2.4 Compatibility statement

A claim of conformance by a Generating or Receiving system with this International Standard shall include a statement listing any other standards supported. This statement shall specify the numbers of the standards, the optical disk Types supported (where appropriate) and whether support includes reading only or both reading and writing.
