EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

Käesolev Eesti standard EVS-EN 1992-2:2005 sisaldab Euroopa standardi EN 1992-2:2005 ingliskeelset teksti. Standard on kinnitatud Eesti Standardikeskuse 25.11.2005 käskkirjaga ja jõustub sellekohase teate avaldamisel EVS Teatajas. Euroopa standardimisorganisatsioonide poolt rahvuslikele liikmetele Euroopa standardi teksti kättesaadavaks tegemise kuupäev on . Standard on kättesaadav Eesti standardiorganisatsioonist.	This Estonian standard EVS-EN 1992-2:2005 consists of the English text of the European standard EN 1992-2:2005. This standard is ratified with the order of Estonian Centre for Standardisation dated 25.11.2005 and is endorsed with the notification published in the official bulletin of the Estonian national standardisation organisation. Date of Availability of the European standard text . The standard is available from Estonian standardisation organisation.

English Version

**Eurocode 2 - Design of concrete structures - Concrete bridges -
Design and detailing rules**

Eurocode 2 - Calcul des structures en béton - Partie 2:
Ponts en béton - Calcul et dispositions constructives

Eurocode 2 - Planung von Stahlbeton- und
Spannbetontragwerken - Teil 2: Betonbrücken - Planungs-
und Ausführungsregeln

This European Standard was approved by CEN on 25 April 2005.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

SECTION 1	General	7
1.1	Scope	7
1.1.2	Scope of Part 2 of Eurocode 2	7
1.106	Symbols	7
SECTION 2	Basis of Design	13
SECTION 3	Materials	13
3.1	Concrete	13
3.1.2	Strength	13
3.1.6	Design compressive and tensile strengths	13
3.2	Reinforcing steel	14
3.2.4	Ductility characteristics	14
SECTION 4	Durability and cover to reinforcement	15
4.2	Environmental conditions	15
4.3	Requirements for durability	15
4.4	Methods of verifications	15
4.4.1	Concrete cover	15
4.4.1.2	Minimum cover, $c_{\min}$	15
SECTION 5	Structural analysis	17
5.1	General	18
5.1.1	General requirements	18
5.1.3	Load cases and combinations	18
5.2	Geometric imperfections	18
5.3	Idealisation of the structure	18
5.3.1	Structural models for overall analysis	18
5.3.2	Geometric data	18
5.3.2.2	Effective span of beams and slabs	18
5.5	Linear elastic analysis with limited redistribution	19
5.6	Plastic analysis	19
5.6.1	General	19
5.6.2	Plastic analysis for beams, frames and slabs	20
5.6.3	Rotation capacity	20
5.7	Non-linear analysis	20
5.8	Analysis of second order effects with axial load	21
5.8.3	Simplified criteria for second order effects	21
5.8.3.3	Global second order effects in buildings	21
5.8.4	Creep	21
5.10	Prestressed members and structures	21
5.10.1	General	21
5.10.8	Effects of prestressing at ultimate limit state	21
SECTION 6	Ultimate Limit States (ULS)	22
6.1	Bending with or without axial force	22
6.2	Shear	24
6.2.2	Members not requiring design shear reinforcement	24
6.2.3	Members requiring design shear reinforcement	25
6.2.4	Shear between web and flanges of T-sections	28
6.2.5	Shear at the interface between concrete cast at different times	29
6.2.106	Shear and transverse bending	29
6.3	Torsion	29
6.3.2	Design procedure	29
6.7	Partially loaded areas	32
6.8	Fatigue	32
6.8.1	Verification conditions	32

6.8.4	Verification procedure for reinforcing and prestressing steel	33
6.8.7	Verification of concrete under compression or shear	33
6.109	Membrane elements	34
SECTION 7	Serviceability Limit States (SLS)	36
7.2	Stresses	36
7.3	Crack control	36
7.3.1	General considerations	36
7.3.2	Minimum reinforcement areas	37
7.3.3	Control of cracking without direct calculation	39
7.3.4	Calculation of crack widths.....	39
7.4	Deflection control	39
7.4.1	General considerations	39
7.4.2	Cases where calculations may be omitted	39
SECTION 8	Detailing of reinforcement and prestressing tendons — General	40
8.9	Bundled bars	41
8.9.1	General.....	41
8.10	Prestressing tendons	41
8.10.3	Anchorage zones of post-tensioned members	41
8.10.4	Anchorage and couplers for prestressing tendons	41
SECTION 9	Detailing of members and particular rules.....	43
9.1	General.....	43
9.2	Beams	43
9.2.2	Shear reinforcement.....	43
9.5	Columns.....	44
9.5.3	Transverse reinforcement.....	44
9.7	Deep beams	44
9.8	Foundations.....	44
9.8.1	Pile caps.....	44
9.10	Tying systems.....	44
SECTION 10	Additional rules for precast concrete elements and structures	45
10.1	General.....	45
10.9	Particular rules for design and detailing	45
10.9.7	Tying systems.....	45
SECTION 11	Lightweight aggregate concrete structures.....	46
11.9	Detailing of members and particular rules	46
SECTION 12	Plain and lightly reinforced concrete structures	46
SECTION 113	Design for the execution stages	47
113.1	General.....	47
113.2	Actions during execution	47
113.3	Verification criteria	47
113.3.1	Ultimate limit states	47
113.3.2	Serviceability limit states	48
ANNEX A (informative)	Modification of partial factors for materials	49
ANNEX B (informative)	Creep and shrinkage strain.....	49
ANNEX C (normative)	Properties of reinforcement suitable for use with this Eurocode.....	55
ANNEX D (informative)	Detailed calculation method for prestressing steel relaxation losses.....	55
Annex E (informative)	Indicative strength classes for durability	55
Annex F (Informative)	Tension reinforcement expressions for in-plane stress conditions.....	56
Annex G (informative)	Soil structure interaction.....	58
Annex H (informative)	Global second order effects in structures	58
Annex I (informative)	Analysis of flat slabs and shear walls	59

Annex J (informative) Detailing rules for particular situations.....	60
Annex KK (informative) Structural effects of time dependent behaviour of concrete	63
Annex LL (informative) Concrete shell elements.....	68
Annex MM (informative) Shear and transverse bending.....	75
Annex NN (informative) Damage equivalent stresses for fatigue verification	77
ANNEX OO (informative) Typical bridge discontinuity regions.....	86
Annex PP (informative) Safety format for non linear analysis	92
Annex QQ (informative) Control of shear cracks within webs	95

Foreword

This European Standard (EN 1992-2:2005) has been prepared by Technical Committee CEN/TC 250 "Structural Eurocodes", the secretariat of which is held by BSI. CEN/TC 250 is responsible for all Structural Eurocodes.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2006, and conflicting national standards shall be withdrawn at the latest by March 2010.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

This Eurocode supersedes ENV 1992-2.

Background to the Eurocode programme

See EN 1992-1-1.

Status and field of application of Eurocodes

See EN 1992-1-1.

National Standards implementing Eurocodes

See EN 1992-1-1.

Links between Eurocodes and harmonised technical specifications (ENs and ETAs) for products

See EN 1992-1-1.

Additional information specific to EN 1992-2 and link to EN 1992-1-1

EN 1992-2 describes the principles and requirements for safety, serviceability and durability of concrete structures, together with specific provisions for bridges. It is based on the limit state concept used in conjunction with a partial factor method.

- EN 1992-2 gives Principles and Application Rules for the design of bridges in addition to those stated in EN 1992-1-1. All relevant clauses of EN 1992-1-1 are applicable to the design of bridges unless specifically deleted or varied by EN 1992-2. It has been appropriate to introduce in EN 1992-2 some material, in the form of new clauses or amplifications of clauses in EN 1992-1-1, which is not bridge specific and which strictly belongs to EN 1992-1-1. These new clauses and amplifications are deemed valid interpretations of EN 1992-1-1 and designs complying with the requirements of EN 1992-2 are deemed to comply with the Principles of EN 1992-1-1.

EN 1992-2:2005 (E)

- clauses in EN 1992-2 that modify those in EN 1992-1-1 are numbered by adding '100' to the corresponding clause number in EN 1992-1-1.
- when additional clauses or sub-clauses are introduced in EN 1992-2, these are numbered by adding '101' to the last relevant clause or sub-clause in EN 1992-1-1.

For the design of new structures, EN 1992-2 is intended to be used, for direct application, together with other parts of EN 1992, Eurocodes EN 1990, 1991, 1997 and 1998.

EN 1992-2 also serves as a reference document for other CEN/TCs concerning structural matters.

EN 1992-2 is intended for use by:

- committees drafting other standards for structural design and related product, testing and execution standards;
- clients (e.g. for the formulation of their specific requirements on reliability levels and durability);
- designers and constructors;
- relevant authorities.

Numerical values for partial factors and other reliability parameters are recommended as basic values that provide an acceptable level of reliability. They have been selected assuming that an appropriate level of workmanship and of quality management applies. When EN 1992-2 is used as a base document by other CEN/TCs the same values need to be taken.

National Annex for EN 1992-2

This standard gives values with notes indicating where national choices may have to be made. Therefore the National Standard implementing EN 1992-2 should have a National Annex containing all Nationally Determined Parameters to be used for the design of bridges to be constructed in the relevant country.

National choice is allowed in EN 1992-2 through the following clauses:

3.1.2 (102)P	5.3.2.2 (104)	6.8.1 (102)	9.1 (103)
3.1.6 (101)P	5.5 (104)	6.8.7 (101)	9.2.2 (101)
3.1.6 (102)P	5.7 (105)	7.2 (102)	9.5.3 (101)
3.2.4 (101)P	6.1 (109)	7.3.1 (105)	9.7 (102)
4.2 (105)	6.1 (110)	7.3.3 (101)	9.8.1 (103)
4.2 (106)	6.2.2 (101)	7.3.4 (101)	11.9 (101)
4.4.1.2 (109)	6.2.3 (103)	8.9.1 (101)	113.2 (102)
5.1.3 (101)P	6.2.3 (107)	8.10.4 (105)	113.3.2 (103)
5.2 (105)	6.2.3 (109)	8.10.4 (107)	

Where references to National Authorities is made in this standard, the term should be defined in a Country's National Annex.

SECTION 1 General

The following clauses of EN 1992-1-1 apply.

1.1.1 (1)P	1.1.2 (3)P	1.2.2	1.5.2.1
1.1.1 (2)P	1.1.2 (4)P	1.3 (1)P	1.5.2.2
1.1.1 (3)P	1.2 (1)P	1.4 (1)P	1.5.2.3
1.1.1 (4)P	1.2.1	1.5.1 (1)P	1.5.2.4

1.1 Scope

1.1.2 Scope of Part 2 of Eurocode 2

(101)P Part 2 of Eurocode 2 gives a basis for the design of bridges and parts of bridges in plain, reinforced and prestressed concrete made with normal and light weight aggregates.

(102)P The following subjects are dealt with in Part 2.

Section 1:	General
Section 2:	Basis of design
Section 3:	Materials
Section 4:	Durability and cover to reinforcement
Section 5:	Structural analysis
Section 6:	Ultimate limit states
Section 7:	Serviceability limit states
Section 8:	Detailing of reinforcement and prestressing tendons — General
Section 9:	Detailing of members and particular rules
Section 10:	Additional rules for precast concrete elements and structures
Section 11:	Lightweight aggregate concrete structures
Section 12:	Plain and lightly reinforced concrete structures
Section 113:	Design for the execution stages

1.106 Symbols

For the purpose of this standard, the following symbols apply.

NOTE The notation used is based on ISO 3898:1987. Symbols with unique meanings have been used as far as possible. However, in some instances a symbol may have more than one meaning depending on the context.

Latin upper case letters

A	Accidental action
A	Cross sectional area
A_c	Cross sectional area of concrete
A_{ct}	Area of concrete in tensile zone
A_p	Area of a prestressing tendon or tendons
A_s	Cross sectional area of reinforcement
$A_{s,min}$	minimum cross sectional area of reinforcement
