Aerospace series - Test methods for transparent materials for aircraft glazing - Part 3: Determination of refractive index

## EESTI STANDARDI EESSÕNA

## NATIONAL FOREWORD

Käesolev Eesti standard EVS-EN 2155-3:2000 sisaldb Euroopa standardi EN 2155-3:1993 ingliskeelset teksti.  Standard on kinnitatud Eesti Standardikeskuse 11.01.2000 käskkirjaga ja jõustub sellekohase teate avaldamisel EVS Teatajas.  Standard on kätesaadav Eesti standardiorganisatsioonist.	This Estonian standard EVS-EN 2155-3:2000 consists of the English text of the European standard EN 2155-3:1993.  This standard is ratified with the order of Estonian Centre for Standardisation dated 11.01.2000 and is endorsed with the notification published in the official bulletin of the Estonian national standardisation organisation.  The standard is available from Estonian standardisation organisation.

NORME EUROPÉENNE

EVS

EUROPÄISCHE NORM

January 1993

UDC 629.73.023.26:620.1:535.32

Descriptors: Aircraft industry, glazing, transparent plastics, glass, tests, determination, refractivity

English version

Aerospace series - Test methods for transparent materials for aircraft glazing - Part 3:  
Determination of refractive index

Série aérospatiale - Méthodes d'essais pour matériaux transparents pour vitrages aéronautiques - Partie 3: Détermination de l'indice de réfraction

Luft- und Raumfahrt - Prüfverfahren für transparente Werkstoffe zur Verglasung von Luftfahrzeugen - Teil 3: Bestimmung des Brechungsindexes

This European Standard was approved by CEN on 1993-01-04. CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Comité Européen de Normalisation  
Europäisches Komitee für Normung

Central Secretariat: rue de Stassart, 36 B-1050 Brussels

### Foreword

This European Standard has been prepared by the European Association of Aerospace Manufacturers (AECMA).

After inquiries and votes carried out in accordance with the rules of this Association, this Standard has successively received the approval of the National Associations and the Official Services of the member countries of AECMA, prior to its presentation to CEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 1993, and conflicting national standards shall be withdrawn at the latest by July 1993.

According to the CEN/CENELEC Internal Regulations, the following countries are bound to implement this European Standard :

Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

### Introduction

The method described in this standard differs from ISO 489, method A, in the testing conditions.

This document is a preview generated by EVS

## 1 Scope

This standard specifies the method used for the determination of the refractive index applicable for transparent materials used in aircraft glazing.

## 2 Purpose of the method

This method is used for the control of purity and composition of materials.

The refractive index shall be considered when designing the parts.

## 3 Definition

The refractive index  $n_{D}^{23}$  is the ratio of the velocity of light in a vacuum to that in the material measured at 23 °C for the sodium D line at wavelength 589,3 nm.

## 4 Apparatus and material

4.1 Abbe refractometer or any other refractometer that can be shown to give the same results ; the accuracy shall be 0,001.

4.2 Source of white light.

4.3 Contacting liquid

Saturated aqueous solution of zinc chloride made slightly acid.

## 5 Specimens

The specimen cut from the sample shall be of such a size as will fit on the face of the fixed half of the refractometer prisms.

For the Abbe refractometer the dimensions are as follows :

- 6 mm wide,
- 12 mm long,
- 3 mm thick.
