CLC/TS 50131-2-7-1

March 2009

ICS 13.320

English version

**Alarm systems -
Intrusion and hold-up systems -
Part 2-7-1: Intrusion detectors -
Glass break detectors (acoustic)**

Systèmes d'alarme -
Systèmes d'alarme contre l'intrusion
et les hold-up -
Partie 2-7-1: DéTECTeurs d'intrusion -
DéTECTeurs bris de glace (acoustiques)

Alarmanlagen -
Einbruch- und Überfallmeldeanlagen -
Teil 2-7-1: Einbruchmelder -
Glasbruchmelder (Akustisch)

This Technical Specification was approved by CENELEC on 2009-03-06.

CENELEC members are required to announce the existence of this TS in the same way as for an EN and to make the TS available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Foreword

This Technical Specification was prepared by the Technical Committee CENELEC TC 79, Alarm systems.

The text of the draft was circulated for voting in accordance with the CEN/CENELEC Internal Regulations, Part 2, Subclause 11.3.3.3 and was approved by CENELEC as CLC/TS 50131-2-7-1 on 2009-03-06.

The following date was fixed:

- latest date by which the existence of the CLC/TS has to be announced at national level (doa) 2009-09-06

EN 50131 will consist of the following parts, under the general title “*Alarm systems – Intrusion and hold-up systems*”:

- Part 1 System requirements
- Part 2-2 Intrusion detectors - Passive infrared detectors
- Part 2-3 Requirements for microwave detectors
- Part 2-4 Requirements for combined passive infrared and microwave detectors
- Part 2-5 Requirements for combined passive infrared and ultrasonic detectors
- Part 2-6 Opening contacts (magnetic)
- Part 2-7-1 Intrusion detectors - Glass break detectors (acoustic)
- Part 2-7-2 Intrusion detectors - Glass break detectors (passive)
- Part 2-7-3 Intrusion detectors - Glass break detectors (active)
- Part 3 Control and indicating equipment
- Part 4 Warning devices
- Part 5-3 Requirements for interconnections equipment using radio frequency techniques
- Part 6 Power supplies
- Part 7 Application guidelines
- Part 8 Security fog device/system

This Technical Specification provides for security grades 1 to 4 (see EN 50131-1) passive acoustic glass break detectors installed in buildings and uses environmental classes I to IV (see EN 50130-5).

The purpose of a detector is to detect the acoustic energy exclusively emitted by the physical destruction of a glass pane, which allows intrusion to the monitored area for example in doors, windows or enclosures and to provide the necessary range of signals or messages to be used by the rest of the intruder alarm system.

Functions additional to the mandatory functions specified in this standard may be included in the detector, providing they do not adversely influence the correct operation of the mandatory functions.

The number and scope of these signals or messages may be more comprehensive for systems that are specified at the higher grades.

This Technical Specification is only concerned with the requirements and tests for the detector. Other types of detectors are covered by other documents identified as EN 50131-2-X / CLC/TS 50131-2-X.

Contents

1 Scope	5
2 Normative references	5
3 Terms, definitions and abbreviations	5
3.1 Terms and definitions	5
3.2 Abbreviations	6
4 Functional requirements	7
4.1 Event processing	7
4.2 Operational requirements	8
4.3 Detection	9
4.4 Immunity to false alarm sources	10
4.5 Tamper security	10
4.6 Electrical requirements	12
4.7 Environmental classification and conditions	12
5 Marking, identification and documentation	13
5.1 Marking and/or identification	13
5.2 Documentation	13
6 Testing	13
6.1 General test conditions	13
6.2 Basic detection test	15
6.3 Performance tests	15
6.4 Switch-on delay, time interval between signals and indication of detection	17
6.5 Fault condition signals or messages: self tests	17
6.6 Tests of immunity to false alarm sources	18
6.7 Tamper security	20
6.8 Electrical tests	22
6.9 Environmental classification and conditions	24
6.10 Marking, identification and documentation	25
Annex A (informative) Example of the setup of the test room	26
Annex B (normative) Catalogue of standard glass types	27
Annex C (normative) List of small tools suitable for testing immunity of casing to attack	28
Annex D (normative) Dimensions & requirements of a standard test magnet	29
D.1 Normative references	29
D.2 Requirements	29
Annex E (normative) Immunity test: Small objects hit sensitivity	32
Annex F (normative) Immunity test: Soft objects hit sensitivity	33
Annex G (normative) Immunity test: Hard objects hit sensitivity	34
Annex H (normative) General testing matrix	35
Annex I (normative) Immunity test: Noise sensitivity	37
Annex J (normative) Performance test setup	38
J.1 Performance test setup	38
J.2 Alternative performance test setup	39
Annex K (informative) Manipulation test: Resistance to re-orientation of adjustable mountings	41

1 Scope

This Technical Specification is for passive acoustic glass break detectors installed in buildings and provides for security grades 1 to 4 (see EN 50131-1), specific or non-specific wired or wire-free detectors and uses environmental classes I to IV (see EN 50130-5). This Technical Specification does not include requirements for passive acoustic glass break detectors intended for use outdoors.

A detector shall fulfil all the requirements of the specified grade.

Functions additional to the mandatory functions specified in this standard may be included in the detector, providing they do not adversely influence the correct operation of the mandatory functions.

This Technical Specification does not apply to system interconnections.

3 Terms, definitions and abbreviations

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 50131-1 and the following apply.

3.1.1

glass breakage

physical destruction of a glass pane, which allows intrusion to the monitored area. For example in doors, windows or enclosures
